SECOND LANDSLIDE PROLONGS BLOCKADE

New York Central's Tracks Near Staatsburg Had Been Nearly Cleared.

Man Injured and a Steam Shovel Buried—How the Trains Reach Their Destinations.

There was another landslide on to the New York Central tracks near Staatsburg, ten miles north of Poughkeepsie, shortly after 9 o'clock last night, and within three minutes a good part of the twenty-four hours' work of more than a hundred men was undone. The tracks had been nearly cleared of the oozy blue clay that, loosened by rainfall, had been washed from the acclivities on either side. It was expected before the second slide occurred that the blockade, which had existed since 9 o'clock on Friday evening, would be lifted within a few hours.

In anticipation of this reopening of traffic on the Hudson Division, the stationmaster at the Grand Central Station was instructed to send out north-bound Central trains over that route. This order came at about 5:30 o'clock. Three and a half hours later there came another, countermanding its predecessor, and instructing the stationmaster to send north-bound trains over the Harlem Division again until further orders. Two passenger trains had been started north, and there was a prospect that they would have to return to Mott Haven, at which junction they can be transferred to the Harlem Division. At 11:30 o'clock a third order came saying that it was expected that the main line would be clear again within an hour, but trains were not to be sent by that route until further instructions were received.

The second landslide, according to information received here last night, was quite similar to the first. The tracks buried, it is said, are in a deep cut. On either side are high banks mostly of clay, but at the base of each hill are firm foundations of stone. The great quantity of clay above, however, saturated and heavy with many tons, became loosened and slipped down onto the tracks. One of the laborers was said to have been buried beneath the earth and quite seriously injured. The large crane and steam shovel that had been used to digging away the mud of the first slide, was also buried, and this impeded the work of clearing the tracks.

"The character of the first blockade," said Superintendent McCoy at the Grand Central Station yesterday, "was correctly described in THE NEW YORK TIMES this morning. It was a very bad and very obstinate disaster, owing to the treacherous character of the material that slipped on to our tracks, burying them thirty-five feet deep. With a large gang of men at work we managed this morning to open up the south-bound track, but we could not control the mass of 10,000 cubic feet of clay that was bearing down on it, and in spite of efforts to back drain it the clay kept on filling up what we cleared."

Mr. McCoy went into detail in regard to the method adopted to restore freight and way service as fast as possible. The net result of the blockade up to last evening, before the second accident, had been to stop twenty-four trains, twelve north-bound and twelve south-bound. Way service could be resumed on the Harlem, handling passengers north and south of the blockade, and having them walk over the clay that covered the tracks because of the character of the stuff that had fallen from a bank sixty-eight feet high. The only feasible plan was to take way passengers off at either Poughkeepsie or Beacon, transfer them across the Hudson, and put them on West Shore trains to be taken over the Hudson again at either point. This, of course, occasioned delay, but there was little grumbling.

The first landslide caught several important through trains. Those south of it had to turn back to Mott Haven, and then on the Harlem system to Chatham, and thence by the Boston and Albany to Boston. This was the case with the Buffalo Special, Train 23, and the Southwestern Limited, Train 33. North of the slide were the Empire State Express, due in New York at 10 P. M., and the Southwestern Limited. They arrived, respectively, at the Grand Central Station at 9:30 and 9:45 A. M. yesterday by backing to Albany, taking the Boston and Albany to Chatham, and then to New York.

The latter problem, however, was to get through the Fast Mail and other important trains by using the West Shore from Albany to Weehawken. This route, with barely a hitch and a delay of from two to three hours. In the meantime the Fast Mail arrangements made with the New York Post Office were carried out to the letter. On the West Shore there were run the Fast Mail, two milk trains, the New York and Northern Express, the American Express train, and the Chicago and Montreal Express. The use of the Albany and Boston and Albany tracks occasioned a delay of about an hour, the distance between Albany and New York by this route being increased by twelve miles over that on the Hudson River route. The train schedule of yesterday had made no provision for these conditions, and the West Shore outlet was

STATE CONTROL OF MINES.

Colorado Citizens Ask Legislature to Acquire and Hold All Coal Lands in Trust.

Special to The New York Times.

DENVER, Col., Jan. 31.—Members of the House had placed on their desks this morning literature urging that the State acquire the coal lands now held by the United States and with its own lands hold in trust as a guard against possible combinations to control the State's coal supply.

One of the circulars was a resolution adopted by the Citizens' League of Denver, in part as follows:

"Whereas, The Pennsylvania coal strikes of 1902 have sounded a warning to the American people which, if allowed to pass unheeded, is liable to be followed by results far more disastrous and threatening to the lives, the industrial welfare, and even the civilization of our country; and

"Whereas, The control by the State of Colorado of its coal lands and supplies within its limits is, we believe, the only final solution of the problem of the protection of the people's interests in the use of these provisions of nature; and all this to come; now, therefore, be it

"Resolved, That we, as citizens of Colorado, request the Fourteenth General Assembly to memorialize the inauguration of measures looking to the acquisition by the State of Colorado of all mining rights to the United States in and to all coal lands within her limits, with a view to their proper holding and administration of the same as a trust for the benefit of all her people."

UNHONORED PASS COSTS $1,950.

Railroad Must Pay a Man Who Was Ejected from a Train.

Special to The New York Times.

HELENA, Mon., Jan. 31.—John Smith was to-day awarded $1,950 damages in the District Court at Billings for injuries due to ejection from a Northern Pacific passenger train. Smith, who was an employe of the Great Northern, purchased a ticket and presented a pass from Huntley to Billings.

The conductor refused to take the pass because it was stamped "Not good on Coast Limited." Smith swore that he offered to pay his fare with a time check but the conductor had not sufficient change to cash it and ejected him while the train was still in motion. He was slightly hurt. The conductor swore that he stopped the train and did not lay hands on him.

Southern's Palm Limited.
The popular train to Jacksonville, Palm Beach, Miami, Tampa, St. Petersburg, via Pennsylvania R. R., Southern Railway and Florida East Coast Line. New York daily, except Saturday, 10 A. M. Also other fast trains daily. Write for folders, 271 and 1185 Broadway.—Adv.

CRUSADE IN NEW YORK ANNOUNCED BY DOWIE.

Zionist Leader Declares He Will Bring 3,000 Workers.

Special to The New York Times.

KENOSHA, Wis., Jan. 31.—John Alexander Dowie, general overseer of the Christian Catholic Church in Zion, to-day announced to 7,000 followers that all plans for the invasion of New York City had been completed, and that within a few weeks excursion trains will carry to the Eastern metropolis 3,000 workers, who will make an effort to establish the creed of the overseer in that city. He has obtained options on Madison Square Garden and Carnegie Music Hall for a long term, he said, and in each of these buildings will hold daily services.

Besides the options for the great buildings contracts were signed with the managers of the Madison Square Garden to furnish meals for the restoration host, he continued. Hotel accommodations have been secured for the workers, and even the metropolis was taxed for places for the men and women. Several hotels have been taken entirely, and the women will be placed in private houses.

The representatives of Zion were cordially received by Mayor Seth Low, he said, and they have been given the right to hold 1,800 meetings on the streets of New York every day in the week.

John Alexander Dowie's plans, which, apparently, are well matured in Zion City, have not been completed at this end of the proposed crusade. In fact, no applications have been received at the Mayor's office for permits to hold street meetings, and, while Dowie has asked for prices of various halls here, he has not yet engaged any of them.

If he should attempt to hold a series of street meetings without a permit, he or his speakers would be arrested on the spot. For a preacher not regularly ordained to obtain a license to hold an outdoor meeting, he must designate exactly at what corner the meeting is to be held, in order that extra police may be detailed there to prevent possible disturbances. That the city would furnish extra police protection at 1,800 different meetings, it was pointed out, is extremely improbable.

Dowie was in this city about two months ago and while here he conferred with a number of his followers in a room which he hired for the occasion at Carnegie Hall. From that visit and from previous manifestos sent out by Dowie it is inferred by those who are familiar with affairs at Zion City that the prophet's need of ready money is the chief motive behind his announced invasion of this city.

That he was really in need of money, he first made known to his followers and to any one else who had money to spare when he sent out on Oct. 8 thousands of circular letters, addressed to "Zion in America," "Zion in Asia," "Zion in Europe," "Zion in Africa." While the circulars scattered broadcast around the world appealed for funds, Dowie declared at the same time that he was worth $23,000,000 in his own right, but that he was short of ready cash, and would pay 6 per cent. on all money advanced.

"Elijah II.'s financial troubles seemed to come apace, for the week after his appeal for money eight suits for debt were filed against him at Waukegan, and Judge Cutting of the Cook County Probate Court appointed a Commissioner to demand $50,000 from him, which sum he was ordered to return to the heirs of Frederick Sutton, one of Dowie's followers.

Sutton's will left all his property to Dowie, but three days after making the will he added a codicil making his brothers and sisters beneficiaries to a large part of the estate. When the heirs filed their claims they were told that Sutton's money was invested in Zion securities. They contended that the money was not invested, but that the $50,000 or more which Sutton brought with him from New Zealand was deposited in the Zion bank. The heirs were offered Zion securities, but they demanded the money.

At the same time a shortage of meat began to make itself felt at Zion City. Before that time two carloads of meat had been shipped to the city each week, but the amount was reduced to one carload. It was said at that time that Dowie was planning some big move to improve the financial condition of his community. His latest announcement, therefore, did not surprise those who are familiar with his methods.

TEN MEN ON DRIFTING BARGES.

Philadelphia and Reading Boats Broke from Their Tow in Bad Weather Off Block Island.

NEW BEDFORD, Mass., Jan. 31.—The barges Pine Forest, Saucon, and Monitor of the Philadelphia and Reading Company's fleet, in tow of the tug Swatara broke adrift off Block Island to-day in a rough sea and a fierce westerly wind. There seemed little prospect at first of picking up her tow, but after considerable hard work the crew of the Swatara succeeded in getting a hawser to the Pine Forest, but were compelled to abandon the others. After docking her single tow at this port the tug sailed immediately in search of the two drifting barges.

Capt. Somers of the Pine Forest says he has no fears for the safety of the other barges, although the weather was exceedingly rough and the barges were taking water over the decks from the high seas. He thought it probable that they would make for the Vineyard unless they were picked up by a tug before they could do so. The barges carried five men each. Capt. Brainerd being in command of the Saucon and Capt. Muller of the Monitor.

LIMIT TO LARGE FORTUNES.

Senator Wellington Proposes That $10,000,000 Shall Be the Maximum Holding of Any Person.

WASHINGTON, Jan. 31.—Senator Wellington to-day introduced an amendment to the Constitution prohibiting the holding of fortunes exceeding $10,000,000 by any one individual in the United States.

In case of such holding the amendment provides that "the excess shall all be condemned, whether or not as a public nuisance, a public folly, or a public peril, and be accordingly forfeited into the United States Treasury."

AUTOMOBILE PARTY STOPPED.

Bicycle Policeman "Ajax" Whitman was on duty on Fifth Avenue at One Hundred and Sixteenth Street last night when a large automobile whizzed by him at great speed. He mounted his wheel and set off in pursuit, calling upon the chauffeur to stop. The latter, he said, only laughed at him and put on more speed. At One Hundred and Twentieth Street however, the machine had to slow up, and Whitman overtook it, arrested the chauffeur, and took the party in the vehicle to the 126th One Hundred and Twenty-sixth Street Police Station.

Here the chauffeur gave his name as Parker Hill of 929 West One Hundred and Twenty-third Street. The party consisted of two women and a man. One of the women gave her name as Miss Norma L. Munro of 36 West Fifty-ninth Street, daughter of the late Norman L. Munro, the publisher, but the others refused to give their names. Magistrate Mayo happened to be at the police station, and he fixed the chauffeur's bail at $600. The other man furnished surety, and the party resumed their trip.

Distributing Kitchens.
Cooks dispensed with in suburban homes.
DINNER BY ELECTRICITY.
All meals will arrive by electric tubular delivery system from central kitchen. Houses, in some cases, can be adapted. Selection of building sites. JOHN ASHLEY, Hotel Manhattan, N. Y. City.—Adv.

ESCHEWED FOOD IN HUNT FOR HAPPINESS

Old Inventor Came to His Death from Starvation.

His Strange Theories Caused Wife and Family to Leave Joseph W. Sheppard and He Lived Alone.

In developing the theory that a man could train himself so that he could live without food, Joseph William Sheppard came to his death yesterday morning in a room he rented in the boarding house of Mrs. Madden at 150 West Eighty-third Street. The facts preceding the old man's end came to light because the Board of Health declined to accept a death certificate signed by Dr. Julian P. Thomas of 26 West Ninety-fourth Street. Coroner Scholer has announced an investigation, to take place to-day.

Dr. Thomas it was learned last night, played very little part in the life of Mr. Sheppard, who was an inventor, a Brahmin in belief, a student of strange philosophies, an Englishmen by birth, and so much of a recluse that it is said he did not have a speaking acquaintance with a dozen human beings. Until he began his final treatment, which consisted of starving himself, he lived for fifteen years on a diet of rice, port wine, and honey.

This diet was preliminary, according to his philosophy, to a state of being in which he would be altogether psychic, with no troublesome physical attributes at all. This strange idea caused his wife to get a divorce from him some years ago, his two daughters to leave his home, and his son to dodge his society as much as possible.

Dr. Thomas, who is a food specialist and rarely visits patients at their homes, knew Mr. Sheppard two years ago. It was about that time that the inventor, then sixty-two years old, began to plan starvation, and it was inferred by those who knew him that he visited the physician simply to study the mind of one who seemed foolish enough to believe in nourishment for unhappy mortals' stomachs.

The doctor's advice was not taken, and their acquaintance had little of professional value in it. Then Dr. Thomas lost track of his mock patient until last Thursday, when he received a summons to visit the inventor. The message came from the old man's son, W. E. Sheppard, manager of the American Brazing Company of 532 West Twenty-second Street. The physician went to 150 West Eighty-third Street. The inventor was so weak and emaciated that he could hardly lift his hand.

"You must eat or you will die," the doctor said to him.

"I don't need to eat," was the reply. "I'll become so well trained that I shall not need food. You were not called in here to satisfy me, but simply because my son insists that you are called for the protection of my family."

All efforts to persuade him to take nourishment, according to both the son and the doctor, were in vain, and the physician went away. Shortly before the old man died there was a second summons, but Dr. Thomas declined to respond, saying it was no use for him to visit a patient who would not do what was ordered. When the death certificate was sent to the Health Board it was accompanied by the following note from the physician:

"Enclosed you will find a death certificate for Mr. Joseph William Sheppard. You will note that I say he died from 'starvation.' Mr. Sheppard had some very peculiar ideas and hung to them tenaciously. For the cure of the trouble he had he decided that he would take a prolonged fast; exactly how long he fasted we do not know. His friends tried to get him to eat, but it was utterly impossible to persuade him to do so. He continued his fast in spite of all efforts—in fact, until he died. His friends and relatives tried to get him to eat, but he would not. They called me in, but I could not influence him to take food. I hope that this report, in conjunction with the death certificate, will be satisfactory."

When Dr. Thomas was seen last night, after giving the facts told above he said Mr. Sheppard had been urged at the last to take just a little fruit juice, if nothing else. He had been a theory of the old man at one time that he might break his fast to the extent of eating "something that was ripened in the sun." But at last he had gotten beyond this stage, and not even a drop from an orange was permitted to pass his lips.

The doctor explained that he refrained from paying the last visit, when asked to do so, because no reputable physician could afford to undertake a case wherein the patient was sure to die from inexcusable refusals to accept treatment.

Mr. Sheppard's son, who lives at the Hotel Endicott, Eighty-first Street and Columbus Avenue, said that no blame in the matter could be attached to Dr. Thomas. His father, he said, was a native of Kent, England, and came to America forty-four years ago.

For many years he was in the publishing business in St. Louis, but a fire brought him financial ruin, and he came to this city ten or eleven years ago to take a place in the local establishment of the Mississippi Glass Company, by which he had been employed for the three years intervening between the fire and his coming East. He remained with the glass concern until a few years ago, and since that time he had devoted himself entirely to his inventions, his books, and his Brahministic theories.

Although most of the inventions were not moneymakers, some of them resulted in enough funds to make their originator comfortable. The most successful was a sort of glass window that would withstand melting from a fire in an adjoining building. Several local department stores and office buildings, it is said, are equipped with the windows.

Young Mr. Sheppard also said that he had discovered some time ago that his father was mad on "religion." It was the result of more than forty years of studying Hindoo philosophy. The old man smiled weakly when asked to take food, and replied that no one need worry about him, as he was doing what he could to reach a state of perfect happiness.

"When my body looks as though I am dead," he would say, "I'll not be dead at all. My physical simply will have yielded to the superior mental."

This he continued to say when he grew so weak that food probably would not have remained on his stomach if he had taken it. Coroner Scholer, after a preliminary examination to see if the man was really dead, expressed the opinion that he was, and that starvation had been the cause.

Mr. Sheppard lived at the St. Denis Hotel, Broadway and Eleventh Street, for some time previous to the outbreak of the Spanish war. To one of the New York regiments he presented a goat, and the soldiers named it "Billy Be-Damn."

The name angered the inventor, and he took no further interest in the regiment, so it was said at the hotel last night. The clerks there knew little about him, but they remembered that he was considered eccentric. The son enlisted and went to the front in the war. He was wounded and mustered out on account of his injuries.

Mr. Sheppard's daughters have come from Atlantic City to attend the funeral. Coroner Scholer will make his investigation early this morning.

CITIZENS AVERT A FLOOD.

Move a Bridge and Break Up an Ice Gorge with Dynamite.

Special to The New York Times.

HONESDALE, Penn., Jan. 31.—Ice gorged at a dam in the Lackawaxen River yesterday afternoon, and the citizens feared a flood. The main business street of the town crosses the stream a few rods above the dam, and the ice was so piled up that the bridge was in danger.

Citizens gathered in large numbers and moved the bridge from its foundations. Dynamite was used to break up the gorge, and a flood was averted. In a similar gorge last Winter Honesdale lost a bridge at the same place.

CAPT. HOBSON RESIGNS.

Naval Constructor Who Sank the Merrimac at Santiago Quits the Naval Service.

Special to The New York Times.

WASHINGTON, Jan. 31.—Capt. Richmond P. Hobson, who sank the Merrimac at Santiago, has tendered his resignation as a naval constructor in the navy.

Capt. Hobson has sought for some time to be retired, but the board which examined him pronounced him fit for duty. He was ordered to duty in charge of construction work at the Bremerton (Washington) Naval Station.

It is well known that for some time Capt. Hobson has suffered from an affection of the eyes, which he and his friends have claimed incapacitated him for active duty. A bill to retire him has passed the House of Representatives, and recently, when it was called up in the Senate by Mr. Morgan, it was passed over on an objection by Mr. Cockrell, who insisted that an examining board having pronounced him fit for duty he should not be retired.

In a letter to the Secretary of the Navy Capt. Hobson sets out the reasons for his resignation, the principal one being the bad condition of his eyes. It is understood to-night that Admiral Taylor, the Chief of the Bureau of Navigation, will make a favorable recommendation on Capt. Hobson's resignation.

GRAU'S SUCCESSOR PRACTICALLY SETTLED.

Charles A. Ellis of the Boston Symphony Orchestra Insisted on the Change Being Permanent.

The plans regarding the opera for next season at the Metropolitan Opera House are becoming more definite, so far as regards the Maurice Grau Opera Company, which hopes to be able to renew its lease for five years. It has finally found a man to take Maurice Grau's place as director, so it was reported yesterday, this person being Charles A. Ellis of the Boston Symphony Orchestra.

To find some man both capable and willing to act as Mr. Grau's successor has proved a difficult task for the company. It has made tentative offers to several, Daniel Frohman being one of these persons. Mr. Ellis was among the persons first suggested as eligible, but he then denied that he cared to have anything to do with the opera. When the proposition was put to him in another manner he changed his mind and is now said to be willing to place himself at the head of the Grau company. However, it is said that he does so only as the permanent and not as the temporary successor of Mr. Grau.

Frederick G. Latham has been offered $15,000 a year to remain in his present position, but as late as yesterday he was undecided. He has already admitted that he may not go to Australia after all, but further than this he will say nothing.

The Grau Opera Company will probably make its proposition of renewing its lease to the Metropolitan Opera and Real Estate Company this week. George G. Haven, President of the Board of Directors of the latter concern, said last night that, of course, he could not say what proposition the company would accept, as it was still ready to receive them.

No matter who takes the Opera House it seems assured that the Metropolitan Company will spend about $100,000 next season in rearranging the stage and buying new scenery. In fact, a clause to this effect was in the lease which the Grau company would have signed had Mr. Grau not become ill.

WELCOME TO MISS ROOSEVELT.

New Orleans Society Will Give a Warm Reception to the Daughter of the President.

Special to The New York Times.

NEW ORLEANS, Jan. 31.—Miss Alice Roosevelt will reach New Orleans on Feb. 16 and will spend the carnival week here as the guest of Mr. and Mrs. Edward McIlheney. Mr. McIlheney served in the Rough Riders troop and is a personal friend of the President.

The McIlheneys have leased the beautiful home of James T. Hayden, President of the Whitney National Bank, for the carnival and will entertain lavishly in Miss Roosevelt's honor during her stay. Mr. Hayden has one of the prettiest homes in the South and the McIlheneys leased it only because he and Mrs. Hayden are traveling in Egypt.

Mr. McIlhenney was asked to-day whether invitations to all the carnival functions had been sent to Miss Roosevelt.

"Miss Roosevelt's has not yet received all of her carnival invitations," he replied, "but I am in a position to know absolutely that they will be received. Any story to the contrary is a malicious slander, which should not be allowed to smirch the reputation of our city's courtesy. It would be an offense not to Miss Roosevelt, but to New Orleans, and I can assure you in perfect confidence that it will not be perpetrated.

"On the contrary, I have heard very reliable rumors that Miss Roosevelt will be the queen of the Comus Ball, and while I do not think that that will be so, it is much more likely to occur than that any of the societies should snub her."

It is known positively that the invitation committees of several of the more prominent carnival societies have issued invitations to Miss Roosevelt, and she will receive the others as soon as they are out. The report that it was intended to issue no invitation to Miss Roosevelt, while it emanated from an authoritative source, is now denied. It is said on the streets that a quarrel in the committee has resulted from the publicity given the subject.

KILLED AT ELEVATED STATION.

Witnesses of Death of Aged Mail Messenger Disagree—Motorman Arrested.

Before the eyes of fifty passengers on the platform of the northbound elevated station at Eighty-fourth Street and Third Avenue, at 8 o'clock last night, Sylvester Lockwood, sixty-five years old, of 233 East Ninety-seventh Street, was run over and instantly killed by the forward trucks of a motor electric train in charge of Motorman Leon Lippman of 168 Hunter Avenue, Long Island City, who was arrested and admitted by Coroner Jackson in $1,500 bail, offered by Charles H. Hawley of Flushing, L. I.

Lockwood was employed for the last ten years as a messenger in the Post Office Department. His duty was to carry mail bags to the Eighty-fourth Street Station from Post Office Station K, at East Eighty-sixth Street. At the elevated station he threw the bags on the front platform of the first car and received from another messenger mail bags intended for Post Office Station K.

He was performing this duty last night when, according to one witness, he fell on the track in advance of the oncoming train, being overbalanced by the weight of the mail bags. According to another witness Lockwood's hat blew off and he jumped down on the track and gave it chase up the track, in advance of the train which overtook him and crushed out his life.

The motorman said he saw Lockwood when the train had reached a point fifteen feet south of the stopping post at the north end of the station. At that time, the motorman alleged, Lockwood was lying on the west rail of the track, about fifteen feet north of the stopping post. The motorman said he shut off and reversed his motor and was unable to explain how Lockwood came to be under the wheels of the forward truck.

Two Tours to Florida.
via Royal Blue Line stopping 10 days Mar. 10. Only $60 round trip from New York, including expenses en route. Procure detailed pamphlet at B. & O. Ticket Offices.—Adv.

TO DROP 20-HOUR TRAIN

Pennsylvania Road Sacrifices the Special to Help Freight.

Determination to Relieve the Congestion at Any Cost—Other Passenger Trains May Be Taken Off.

Special to The New York Times.

PHILADELPHIA, Jan. 31.—The Pennsylvania Railroad's famous twenty-hour train from New York to Chicago, upon which the company has spent at least a half-million dollars for equipment and in bringing to perfection the arrangements for its phenomenal runs, is to be abandoned, temporarily at least, so that the railroad company may break the freight congestion and relieve the coal shortage in the East.

The taking off of the Pennsylvania special was the subject of many conferences held during the last week in the office of President Cassatt. There were present all the Vice Presidents and transportation managers.

It was agreed that the freight congestion must be broken at any cost if human ingenuity and determined effort could do it. It was agreed, also, that the attack must be made at the top, and that the Pennsylvania special, the pride of the passenger department, must be sacrificed. That will be the first train to go. If necessary, other fast passenger trains will be taken off, but the freight blockade must be broken.

The "Pennsylvania Special" will make its last trip Wednesday or Thursday next. All the Division Passenger Agents between New York and Chicago were notified to-day that the train would be taken off next week, and asking what reservations had been made for it. Answers received at the Broad Street Station up to late this evening showed that no reservation had been made for any day later than Wednesday. It was announced, therefore, that the train would positively be taken off not later than Wednesday next.

Pennsylvania officials say that the twenty-hour flyer, which was at first regarded as a hazardous experiment, is now a paying train, and has been highly appreciated by the public. They believe that its abandonment will greatly add to the elasticity of the company's train service, and expedite all train movements.

The taking off of this train, which is daily driven at a tremendous speed each way between New York and Chicago, means the clearing of tracks for hundreds of local passenger and freight trains. The special has averaged every foot of the way between New York and Chicago. It has the right of way over every other train, and freights are laid by for an hour, and even two or three hours, until the flyer is safely past.

Hundreds of trainmen and yardmen are charged to-night with being that all is well with this special, and its abandonment will permit all these employes to devote their attention solely to relieving the freight congestion. The dropping of this single train from the Pennsylvania schedules, officials say, will do more toward relieving freight congestion than the abandonment of scores of local trains on divisions between New York and Chicago.

Special to The New York Times.

PITTSBURG, Jan. 31.—A reason given for the discontinuance of the twenty-hour train between New York and Chicago by the Pennsylvania Railroad is the freight congestion. For several months it has been found impossible to maintain on this train the fast schedule assigned to it. Despite all the efforts of the operating department, the train has been kept in the path of the train so often that for the present it has been given up as a hopeless task to operate it with the speed which is the train's very cause for existence.

On this train the speed is guaranteed. An extra fare of $5 is charged between New York and Chicago on account of its fast schedule, and in cases where the train does not arrive on time the excess fare is refunded to the passengers in proportion to the time the train falls behind its schedule. That has happened repeatedly of late, in Pittsburg the train has been held up time and again for so long that the rest of the run was a failure.

FREE COAL HELPS RAILROAD.

Great Northern Is Rushing Into Montana the Product of the Crow's Nest Mines in Canada.

Special to The New York Times.

TACOMA, Washington, Jan. 31.—Removal of the duty on coal is believed to be benefitting the Great Northern Railroad more than any other interest in the West.

There is no good coal in Montana directly tributary to the Great Northern, and James J. Hill has for several years been booming the development of the Crow's Nest Pass coalfields in Southern Canada. Recently he completed a branch railroad connecting the Great Northern with the Crow's Nest coal mine. At Coquenel the Great Northern is hauling 300 cars or 6,000 tons daily across the Montana line on its mountain divisions. Development work is being rushed, and very soon imports of this coal will reach 500 cars or 10,000 tons daily.

Before the removal of the duty the Great Northern was paying the customs department at the gateway 67 cents duty on every ton. The daily saving effected by the removal of the tariff exceeds $4,000. With the shipments increased to 500 cars, the saving in duty will reach $6,700 a day. When a cut-off can be built connecting the Great Northern with the Northern Pacific and Burlington lines in Montana the latter roads will also use the Crow's Nest coal in the Rocky Mountains.

TO INCREASE DEATH DAMAGES.

Chicago Lawyers Want the Rate for Fatality in Accident Cases Made $10,000 in Illinois.

Special to The New York Times.

CHICAGO, Jan. 31.—Chicago lawyers look with favor upon a bill that Representative Michael E. Hunt will introduce in the Legislature increasing the statutory value of human life from $5,000 to $10,000. Opposition is looked for from corporations that are often called upon to pay for deaths from accidents.

"There is no doubt that $5,000 but meagrely compensates in many instances for the loss of a head of a family or one of its members," said former Judge Thomas A. Moran to-day. "The value of the decedent may have been in many instances $50,000 or $100,000. An increase of the damages which may be recovered for a death due to accident or other violence might also have the effect of causing greater care on the part of corporations.

"In these days of great prosperity money has become so cheap that $5,000 does not represent half as much as it did when that limitation was placed on the value of a human life," said Adolf Kraus in championing the proposed bill. "The law decrees to compensate those who have been deprived of the earning capacity of one on whom they depended. The price should be doubled."

Employes Share in Prosperity.

Special to The New York Times.

MATTEAWAN, N. Y., Jan. 31.—The New York Rubber Company yesterday pleasantly surprised several hundred employes by doubling their salary for one week, with the best wishes of the company. The rubber company has had a prosperous year. At the annual meeting in New York this week the corporation declared a regular dividend of 8 per cent. and an extra dividend of 6 per cent. on the year's earnings. It was felt that a portion of the profit should go to the hands who have done faithful service in the departments of the factory.

CAR RIOTS IN WATERBURY.

Non-Union Men Stoned, and the Police Are Powerless—Strikers Urge the Mobs to Disperse, but Without Effect.

WATERBURY, Conn., Jan. 31.—The trolley strike condition in this city to-night reached the proportions of a general riot. Every car sent out from the barns was greeted with a volley of stones at various points, and no car escaped without broken windows. Thousands of persons filled the streets, and the police were powerless to control the mob, at length [illegible] to request the Connecticut [illegible] and Lighting Company officials [illegible] their cars.

The request was complied with, and the last car pulled into the barns at 11:15 o'clock, escorted by the police. Motorman [illegible] was injured so severely by stones that a car starter had to [illegible] place. Several other motormen [illegible] were hit seriously hurt.

The trouble began early [illegible] morning. At 7 o'clock Chief of Police [illegible] found the situation so threatening [illegible] summoned the entire police force [illegible] his men at points in the outlying city, but the officers were utterly [illegible] to cope with the crowd, which [illegible] more than 5,000. As the cars reached the junction formed by Bank and [illegible] South, East, and West Main Streets they were bombarded with missiles [illegible] caused injury.

Members of the trolley men's union are said to have tried to assist the police by asking the people to return to their homes and let the cars run unmolested, but their efforts were of no avail. The cars of the Naugatuck line seemed to be especially singled out for the targets of stones, and consequently sustained the most injury.

Prominent citizens early in the evening sent requests to the officials of the railroad company to take off the cars, which was done when the police secured [illegible].

The last car to be run on the Bank Street line was followed by a [illegible] persons and was continually showered with stones. On its return trip the motorman was struck by a stone and severely injured. The trolley pole was knocked down, and but for the conductor climbing upon the roof and replacing it [illegible] car reached the centre of the city the motorman was unable to continue at [illegible] and a car starter had to run the car into the barn. The crowd then gathered about the barn and continued to make [illegible] demonstrations, hooting and jeering at the non-[illegible] men.

Throughout the evening the strikers ran their omnibuses, and every one of these vehicles was well patronized, while few people ventured to ride upon the cars.

Some of the policemen were roughly handled by the crowd during the night. Chief Egan received a hard blow in the face. The men were obliged to wield their clubs in several instances, but an order issued by the Chief early in the evening that clubs should not be used unless absolutely necessary was generally observed.

BOILERMAKERS TO STRIKE.

Southern Pacific, Oregon Short Line, and Oregon Railway and Navigation Company Will Be Affected.

Special to The New York Times.

OMAHA, Jan. 31.—It is asserted that in three or four days the boilermakers on the Southern Pacific, the Oregon Short Line, and the Oregon Railway and Navigation Company will be called out on a strike. John McNeil, Grand President of the Brotherhood of Boilermakers and Iron Shipbuilders, after his conference with President Burt here Friday morning, returned to Kansas City to take action looking to the future of the big strike. He will go West at once to take personal charge of the big involvement. The strike that is to come.

When President Burt told the joint committee of the men on Friday morning that they must accept piece work if they worked on the Union Pacific, McNeil and the other leaders all expressed themselves as feeling that they had been playing for time while holding out to their constituents, and a feeling of resentment and distrust immediately followed.

DISORDERLY STRIKER FINED.

He Interfered with Non-Union Workingmen at Lynn.

LYNN, Mass., Jan. 31.—For interfering with union shoe cutters, brought here to take the place of Knights of Labor strikers, Edwin G. Beal was fined $20 in the Lynn Police Court to-day.

The hearing of evidence on the application of the manufacturers for an injunction against the striking cutters was continued before F. B. Lockwood Hall of Boston, Master. Thomas J. Harney of Harney Brothers, testified that since the first hearing crowds had assembled nightly at his factory. He had recognized three of his old cutters. There had been snowballing. He had been hit on the arm and a non-union man named Epstein had been assaulted so seriously early this week that he had been unable to work since.

NON-UNION MEN REWARDED.

Rio Grande Railway Increases Wages of Unorganized Workmen.

Special to The New York Times.

DENVER, Col., Jan. 31.—The Rio Grande to-day granted a voluntary increase of 2½ to 5 per cent. to the shop employes who are not affiliated with unions, but it does not extend to the organized men. It was learned to-day that the Gould management has been endeavoring to make the fight against the trainmen, on a partnership basis, in which all the large Western lines that have refused to grant the demands of their men, will join, aiding the Missouri Pacific, Rio Grande, and other Gould lines. This plan would bring the coming fight to a focus.

On excellent authority it is stated, however, that Mr. Gould has been disappointed in the responses from the other lines.

LINER HIT BY TIDAL WAVES.

The French liner La Lorraine, which arrived at Quarantine at 12:30 P. M. yesterday, was detained there for more than two hours on account of a case of smallpox which was discovered on Wednesday among the steerage passengers. The patient was a young man, Maris Bousto. Of the 704 steerage passengers on the vessel, 206 occupied the compartment in which Bousto was, and they were removed to Swinburne Island for observation. The patient was taken to Hoffman Island. After fumigation, La Lorraine was allowed to proceed.

The liner ran into all varieties of rough weather on the trip from Havre, including gales, snow, rain, and two tidal waves. The first wave was encountered in the Channel on Monday morning last, and the shock was so violent that some of the passengers were tumbled out of their berths. "I thought that we had run into an iceberg," one of them said. The ship was brought to a standstill, and she trembled like an aspen leaf. A similar wave hit the liner early yesterday morning when she was off Nantucket.

Notwithstanding tidal waves and stress of weather the steamship was only a few hours behind her regular time. Six miles east of Fire Island at 10 o'clock yesterday morning the liner passed a barge with some men on board. It apparently was adrift, and Capt. Alix stood by, but the man declined assistance. The barge was reported later by the Marine Observer at Fire Island as drifting eastward.

Among the passengers on La Lorraine were E. Guichlis, the Bolivian Minister to the United States, who has been abroad on a vacation, and Baron de Neuflize, a Parisian banker.

The Line of Least Resistance

ALLIES REJECT SOWER'S PROPOSAL IN TOTO

Replies Withheld by Ambassadors Who Urge Retraction.

Outlook for Relief of Despatches Gloomy—Belief That Case Must Go to Hague Tribunal—Protest Against Discrimination.

WASHINGTON, Jan. 31.—The allies have rejected Minister Bowen's proposal that the matter in controversy between them and Venezuela be referred to the Hague Court of Arbitration, and that there is no evidence that the allies intend yielding. If they note any representations must present the facts to Minister Bowen, and the Washington negotiations will come to a standstill.

Baron Speck von Sternburg, German Minister, Envoy Extraordinary and Minister Plenipotentiary to the United States, who was at his desk bright and early to-day, spent two hours in conference with Mr. Quadt, who, as Charge d'Affaires, has so far conducted the Venezuelan negotiations for Germany. The German Minister, who is in possession of the entire correspondence which has passed between Minister Bowen and the allied powers and was advised by the Count of the outline of the note which has occurred as a result of the contention of the triple alliance for preferential treatment in the settlement of their claims.

Baron Sternburg in his calls at the State Department and the British Embassy to-day found the outlook for a relief of the present dead-lock exceedingly gloomy. He has cabled as much to his Government.

Meanwhile Mr. Bowen is doing his share in keeping Germany informed as to the progress made by the allies in the matter of patience, hoping that the powers will yield.

As a matter of fact, he has received no intimation from the powers that they are really desirous of setting Venezuelan claims at rest. The representations of the powers, so far as consisted of counter propositions.

It is learned to-night that Minister Bowen is taking a very hopeful view of the situation. The adverse reply to his latest proposal has not been delivered to him up to a late hour. The fact that forty-eight hours have now elapsed without any communication from the allies has reached him gives rise to the belief that the powers are carefully considering his pro

to South American events, and Mr. Nicholson find a serious falling out with Admiral von Tirpitz on this question.

BERLIN'S VERSION OF DEAD-LOCK.

By The Associated Press.

BERLIN, Jan. 31.—The apparent hitch in the Venezuelan negotiations at Washington is explained here in the following manner:

Venezuela hypothecated to France three years ago 30 per cent. of the customs receipts, which constitutes a priority claim upon the Venezuelan customs. The blockading powers are quite willing to recognize it in this form, but President Castro wants it to be understood as constituting part of the 30 per cent. offered by the blockading powers. As the latter would then have only 17 per cent. left, they regard it as inadequate and hence are not willing to permit the inclusion of France's percentage.

It is believed here that the blockade will not be raised until President Castro yields on this point.

WASHINGTON, Jan. 31.—Minister Bowen, when shown the dispatch regarding the explanation given in Berlin of the apparent hitch in the Venezuelan negotiations, said:

"All settled foreign claims are covered by the 15 per cent. arrangement. The 30 per cent. proposition now offered refers exclusively to unsettled claims, which not only the blockading powers, but the peaceful powers, are pressing for settlement. It is absolutely false that the 15 per cent. arrangement is included in the 30 per cent. proposition. It is entirely distinct.

"There has been so much conference, discussion, and misunderstanding in regard to this question of percentage that I am willing to make this statement."

CLAIMS OF ALLIES INVALID.

Diplomat at Caracas Says This is the Real Reason for Demands for Immediate Cash Payment.

CARACAS, Jan. 31.—All the newspapers of Caracas have published articles to the effect that the action of the allies in imposing upon Venezuela special preferential treatment in the settlement of their claims is on a par with all their previous acts since the beginning of the difficulty, namely, unjust and unreasonable.

The correspondent of The Associated Press approached the members of the diplomatic corps here, asking for their opinion on this phase of the matter. Two declined to speak, but a third was willing to discuss the matter on condition provided his name was not used. He said:

"The action of Great Britain, Germany, and Italy in trying to impose favored treatment on their claims, and in demanding, in addition, cash payment, arises from the fact that they know their claims are not well founded. My colleague, Mr. [illegible] (the British Minister), before his departure presented claims to the Venezuelan Government on behalf of Great Britain for the amount only of $6,000. The remainder of Great Britain's claims against Venezuela is not known. What they may be is problematical. In this connection it must be remembered that schooners from the British island of Trinidad have been assisting the Matos revolutionists, as well as smuggling, and that these vessels have been rightfully seized by Venezuela. Great Britain was sure beforehand that no tribunal would recognize certain of her claims, and, therefore, she wanted to force their immediate payment.

"Germany, for the same reason, does not desire that the Disconto-Gesellschaft loan scandal become known to the financial world.

"The Italians have no industrial enterprises in Venezuela. Italians here are mostly agricultural laborers and peddlers; these have undoubtedly suffered, but they claim $10 for the loss of a chicken and $100 for the theft of a donkey. It can be seen why Italy does not wish to have her claims discussed by a tribunal and prefers force to reason.

"No belief should be attached to the statement that France will abandon her rights, in the matter of her own claims, which were obtained by anterior diplomatic treaties with Venezuela. I know upon good authority that France is not disposed to capitulate, and I hope that the United States, which also has claims against Venezuela, will not gratify the allies by accepting such treatment."

There was much excitement among the foreigners here when it was reported that the allies proposed special treatment to secure the payment of their claims. Americans, Frenchmen, and Spaniards met and protested against the carrying out of such an idea, and cable messages were addressed to the Governments of the United States, France, and Spain asking for protection of their several rights, and that the claims of the petitioners be accorded treatment similar to that given to British, German, and Italian claims.

AN APOLOGY FOR ENGLAND.

Austen Chamberlain Said Courtesy Made It Impossible Not to Join with Germany.

LONDON, Jan. 31.—Austen Chamberlain, Postmaster General, representing his father, the Colonial Secretary, at the annual dinner of the Jewelers and Silversmiths at Birmingham to-night, devoted the greater part of his speech in reply to the toast "His Majesty's Ministers" to Venezuela.

He said that after the British Government had decided to seek satisfaction for the various outrages and to demand guarantees against their repetition, it had been asked by Germany and requested to join with that country. Courtesy was responsible for the British Government's decision, said Mr. Chamberlain, and it would be dishonorable to withdraw. The Government is fully aware of its liabilities, but detail was arranged before it announced.

Alluding to a suggestion that the present crisis might jeopardize the good relations existing between the United States and Mr. Chamberlain said it was one which he would regard it as a calamity to the world.

"There is no nation whose good opinion we more desire to retain valued so highly as that of the United States. We feel, and I think we brought it incredible that the United States should take umbrage, as it knew that no nation so loyally supported the Monroe Doctrine as did Great Britain. The present course did not menace the Monroe Doctrine," Mr. Chamberlain, which, although it might be echoed in parts of the week, was never intended by American statesmen to shield the evildoer.

FRENCH PRESS PESSIMISTIC.

Fear That a Renewal of Hostilities in Venezuela Will Follow Present Complications.

PARIS, Jan. 31.—Official sentiment is more hopeful of an adjustment of the Venezuelan questions, owing to the receipt of advices to the effect that the representatives of the allies have asked their respective Governments for further instructions.

There will probably be a simultaneous presentation of France's position through the French representatives in London, Berlin, and Rome. The authorities are examining the plan for aggregating the claims of the powers which did not participate in the blockade, as suggested by Minister Bowen, and are inclined to regard it favorably.

The tone of the French press shows that the editorial writers fear there will be a renewal of hostilities by the allies in Venezuelan waters as a result of the present complications.

The Temps points out that the world's chief interest is to secure an end to the whole affair, which is beginning to be viewed as another Mantchurian blunder."

[illegible] commanders again feel that they are at liberty to take action owing to the failure of the negotiations, there will be a new incident like that of San Carlos."

The Journal des Debats takes a similar view, and concludes:

"The modification of the delays tends to confirm the view that the allies do not sincerely desire a settlement of the trouble."

Considering the French claims against Venezuela, the Temps, Journal des Debats, and other newspapers hold that the allies' request for preference is not tenable. The Temps declared it is inadmissible that Germany, Great Britain, and Italy "can by mere force secure priority over France and the United States, who have already secured a peaceful settlement of their Venezuelan claims."

GERMANY SEEKS WARSHIPS.

Offers to Purchase Immediately Two Vessels of Chilean Navy.

SANTIAGO, Chile, Jan. 31.—Private agents of Germany have proposed to the Government the immediate purchase of the Chilean battleship Capitan Prat and the armored cruiser Esmeralda, and have offered to take over the warships now being built in Europe for Chile.

WASHINGTON, Jan. 31.—The Navy Department has received full reports from its agents abroad respecting the size, displacement, armament, defensive power, speed, and cost of the vessels now building for Chile and Argentina in Europe.

The Chile is battleships, two in number, are generally described as resembling the Alabama class of our own navy. It cannot be ascertained that any option for the sale of these ships has been secured or indeed, has been sought, and official denial is made of a purpose to purchase ships, which cannot be accomplished in any case without legislation by Congress.

It is further pointed out that it is the practice of the Navy Department to secure such data wherever possible about all ships of sufficient merit in design to warrant study.

HURRYING NAVY YARD WORK.

Government Plant at Washington to be Kept in Operation Day and Night.

WASHINGTON, Jan. 31.—The three-shift system by which work will be kept up day and night, will be inaugurated in the gun carriage shop at the Washington Navy Yard Monday. There is an imperative demand for completing the orders now on hand, and the step is taken with a view to expediting the completion of the work, the orders for which were given over two years ago.

It is the purpose of the naval officials to keep the other shops at the yard in full operation during the entire day and night as soon as sufficient workmen can be obtained.

SPRINGFIELD, Mass., Jan. 31.—Orders have been received at the United States Armory here to rush the shipment of 100,000 Krag rifles to arsenals over the country. The original cause of the order was the Dominican difficulty, but the rush feature of the order apparently has a special cause.

AMERICANS FORCE BLOCKADE.

Adventurous Pair Offer to Serve in Venezuelan Army.

PUERTO CABELLO, Venezuela, Jan. 31.—Two Americans, James Cooper and Grovie Allen, have arrived here in a sloop after having forced the blockade. Cooper is an ex-Confederate Major of cavalry, and Allen is a military engineer. They have come to serve with Venezuela against the allies in the event of hostilities. They left here for Caracas to-day.

Cruiser Falke Still Active.

CARACAS, Jan. 31.—News has reached here that a German warship, supposed to be the cruiser Falke, was seen this morning near the bar at Maracaibo. She was taking advantage of the fine weather and was actively engaged in making soundings. She had landed men in her small boats.

MRS. VANDERBILT'S GENEROSITY

Memorial Ward to be Added to the Newport Hospital Will Probably Cost $250,000.

Special to The New York Times.

NEWPORT, Jan. 31.—It is now expected that the new ward at the Newport Hospital, which is being erected by Mrs. Vanderbilt as memory of the late Cornelius Vanderbilt, will be completed in May. Originally it was her intention to erect a plain brick structure, two stories in height, but there has been a decided development, and while the original plans called for $27,000, it is said that $250,000 will now be expended.

The complete equipment of the ward will be at the expense of Mrs. Vanderbilt, even to the linen and silver, which is being made from special designs, each article bearing the Vanderbilt crest. The furniture is to be also manufactured especially for this ward.

The new building will largely extend the work of the hospital, providing an out patient department, a children's ward, and a ward for the treatment of women's diseases.

CONDITION OF JOHN D. LONG.

Ex-Secretary of the Navy Somewhat Stronger and at Times Rational.

BOSTON, Jan. 31.—The bulletin issued at 10 o'clock to-night at St. Margaret's Hospital on the condition of John D. Long, ex-Secretary of the Navy, was as follows:

"Mr. Long has had a comfortable day. His condition is now a little more favorable than at this time last night. He has been less incoherent in his speech, and at times quite rational. He is somewhat stronger."

Mr. Long slept early this afternoon, and his condition was therefore described as quiet and peaceful. As far as can be told, Mr. Long has not been conscious for the patient. Miss Margaret Long, who left the hospital last evening for her home in Hingham, returned to her father's bedside early to-day. Mrs. Long has been in constant attendance.

Reading Record Coal Shipments.

READING, Jan. 31.—The Reading Railway Company during January carried on its main line to tidewater nearly 1,100,000 tons of anthracite coal. During the last week the company took down more than 10,500 cars containing about 273,000 tons. The shipment of coal during the past month has been the heaviest in the history of the Reading Company.

E. C. Peters Gets Hawaiian Office.

HONOLULU, Jan. 31.—E. C. Peters has been appointed Assistant Attorney General for Hawaii. He is well known in California, having been a student at the State University and studied law at the Hastings Law College and at Stanford University.

Died in Effort to Save Property.

Special to The New York Times.

SARATOGA, Jan. 31.—Charles Diamond lost his life at Bacon Hill, Saratoga County, early this morning while trying to save his bank book, a valuable violin and other personal property. He lived with his brother-in-law, Lewis Cairr, whose farm dwelling was burned. All of the family had reached a place of safety when Diamond, regardless of appeals, rushed back into the building and perished.

Wind Blew Stage Coach Over.

SCHENECTADY, N. Y., Jan. 31.—During the gale of wind that swept over this section of the State this morning the stage between this city and Fayville was blown over. There were several passengers in the stage at the time of the accident, but no one was hurt.

VON STERNBURG DELIGHTED

Expresses Joy at Once Again Being in Washington.

German Representative Is Presented to the President—Says His Country Is Anxious to Settle Venezuelan Question.

WASHINGTON, Jan. 31.—Baron Speck von Sternburg, the special representative of Germany in the Venezuela negotiations, who arrived in Washington last night, was presented to President Roosevelt to-day by Secretary of State Hay. The call was formal, the Baron desiring to present his credentials as Special Minister from Germany to this country before taking charge of the Embassy's affairs in the absence of Ambassador von Holleben.

The exchanges were verbal, the President for this occasion waiving the usual preparatory ceremonies, and Baron Sternburg confined himself to an expression of the Emperor's friendly feeling for the United States and his own gratification at being able to return to America in this capacity.

The President responded in a felicitous vein, incidentally expressing the hope that the Baron's coming would result in the settlement of all pending questions, this being an indirect reference to the Venezuelan issue. Beyond this the question was not discussed.

The Baron, who was received in the Executive offices, remained but a few minutes. He will call upon Minister Bowen this afternoon.

To a representative of the Associated Press Baron Sternburg expressed the gratification he felt at returning to the United States.

"I appreciate the kindness with which the announcement of my coming has been received," he said. "It has all been very sudden. I had merely gone to Berlin for a short time on my way back to Calcutta when orders came to return to Washington as soon as possible and assume charge of the Embassy in the absence of the Ambassador.

"As I return to America as a Minister Plenipotentiary from my Government, I am reminded of the changes that have taken place since I was here, more than ten years ago, as a military attaché. Then your President was a Civil Service Commissioner. I do not pose as a prophet, but when I first met Mr. Roosevelt I was deeply impressed with his untiring energy and essential sincerity of purpose. It was this combination which convinced me that some day I should see him at the head of this great Nation.

"When I said good-bye to him upon my departure from Washington the first time I added:

"'When I again congratulate you, Mr. Roosevelt, you will be one step nearer the White House.' On hearing of his appointment as Assistant Secretary of the Navy I wrote him, 'Permit me to congratulate you on this second step nearer the Presidency,' and when he was elected Governor of New York I telegraphed him, 'The next time I offer you my congratulations it will be to President Roosevelt.'

"I believed he would be President because I knew the stuff he was made of. To me, and the same opinion prevails in Europe, your President is the personification of what is good and great and healthy in America.

"You appreciate the fact that I cannot as yet talk of the primary object of my mission, the conduct of the Venezuelan negotiations. I shall take up the threads and proceed at once in my endeavors to effect a settlement. I want the American people to know Germany is as anxious for an early conclusion of this question as any of the negotiators.

"I am glad to see the point made that the Monroe Doctrine is not in any way involved in the Venezuelan situation."

TYPHOID SPREADS AT ITHACA.

Nurses Give Up Their Rooms to Accommodate Patients—Fever Caused by Impure Water.

ITHACA, N. Y., Jan. 31.—The epidemic of typhoid fever which recently started here has attained serious proportions.

The nurses of the City Hospital were obliged to give up their rooms to patients to-day. The Rev. C. W. Peiser of the Unitarian Church has offered his church for a hospital.

There are at least 200 cases in the city at present, and the list is rapidly increasing. Physicians agree that the epidemic is due to impure drinking water, and all citizens are warned not to use city water before it is boiled.

DR. PORSCH SENTENCED.

The Prisoner Amazed by a Revelation of the Lawyer for the Prosecution—Denounced by Judge Thomas.

Dr. Ottakar Porsch and his son, Joseph E. Porsch, who interrupted their trial to plead guilty to charges of defrauding the United States Government by making false affidavits as to the value of chemicals which they were importing for use in making perfumery, were arraigned for sentence before Judge Thomas in the Criminal Branch of the United States Circuit Court yesterday. The older man was sent to Sing Sing Prison for eighteen months and the son, who has just attained his majority, was released under suspended sentence.

Counsel for the prisoners told Judge Thomas that Dr. Porsch was a gentleman of high culture and attainments and eminent as a chemist, having degrees from several universities of Europe, and that the Emperor of Austria and the King of Belgium had decorated him.

Assistant District Attorney Baldwin said in reply that he visited Austria last Summer and talked with the prisoner's record. Dr. Porsch had never been decorated by Emperor or King, he said, nor had he been graduated from a university in Europe or elsewhere. The prisoner's right name, Mr. Baldwin said, is Heinrich Novak.

The prisoner gazed in amazement at the lawyer. Judge Thomas denounced Dr. Porsch for leading his son into crime. The son left the courtroom without a parting glance at his father.

YESTERDAY'S FIRES.

(From 12 o'clock Friday night until 12 o'clock Saturday night.)

1:35 A. M.—832 Ninth Avenue; Columbus Awning Company; damage, $500.

3:30 A. M.—270 Bowery; Majestic Lodging House; damage, $10.

8:45 A. M.—305 Grand Street; Jacob Shempel; damage, $3,000.

4:12 A. M.—225 West Forty-fifth Street; Margaret Hobart; damage, $10,000.

4:30 A. M.—779 Tenth Avenue; owner unknown; damage, $1,000.

6:05 A. M.—819 Ninth Avenue; owner unknown; damage, $1,000.

6:07 A. M.—536 West Thirty-fourth Street; owner unknown; damage trifling.

7:50 A. M.—458 West Forty-sixth Street; owner unknown; damage, $30.

8:45 A. M.—324 East Broadway; Julius Steinberg; damage, $300.

9:30 A. M.—111 Orchard Street; Henry Hirsh; damage trifling.

10:45 A. M.—180 West Tenth Street; Louisa Levy; damage, $25.

12:30 P. M.—32 Wall Street; United States Assay Office; damage, $5,000.

3:00 P. M.—871 Eighth Avenue; Annie McCoy; damage, $125.

3:45 P. M.—Mulligan Place; Daniel Edwards; damage trifling.

4:20 P. M.—110 Macdougal Street; Mrs. Hopewell; damage, $25.

6:20 P. M.—Sixth Avenue and Eighth Street; Metropolitan Street Railroad; damage, $50.

7:15 P. M.—546 West Fifty-first Street; William Starburg; damage trifling.

9:40 P. M.—35 Jefferson Street; John Hinner; damage trifling.

MARQUAND TREASURES BRING $706,019.75

Record Sale a Persian Rug Which Goes for $38,000.

Vitai Benguiat, the Purchaser, Thought by Many of the Sale's Watchers to Represent Senator Clark.

At the conclusion of yesterday's sale of Marquand treasures there was a gathering of the successful buyers in the offices of the American Art Association, 6 East Twenty-third Street, where they congratulated one another on having obtained the objects they had sought and here and there was an exchange of money on the result of the total realized at the sale. A few of the bettors waited for the official account, persons who had given odds that the amount would be less than $700,000, and who in their addition had failed to realize that such a sum had been bid. The official figures were announced shortly after 6:30 o'clock, $706,019.75, the figures for the day being $224,564.50. The remaining bets were paid.

There was a demonstration of approval with handclapping when the auctioneer, Thomas E. Kirby, appeared. He seemed embarrassed at the ovation, and hurriedly got out of the way. The professional art dealers were nearly unanimous in the statement that the record sale had been warranted by the excellence of the objects in the Marquand collection. They took occasion to say that, though it was true that several of the higher priced articles would be returned to collections in Europe, yet the idea that there had been a general onslaught on the art treasures of America was erroneous, an impression which met with little denial during the lively days of the sale. The greater number of the higher priced objects are to stay in this country, having been bought by wealthy Americans or the representatives of art institutions in this country. The altar screen purchased by J. Seligman of Paris Friday afternoon, with several other high-priced articles bid in by him, it was agreed, will go to French collections, and some of the high-priced Greek terra cottas and marbles would go abroad. Some of the rugs which did not bring fabulous prices but were bid in at stiff figures are to go abroad also.

DEALERS REPRESENT MANY.

E. Fischof, who has been known to represent several wealthy Americans in his bidding, from whom he had carte blanche in so far as his judgment would allow him to go, and who was known to be here to buy for certain European collectors and art institutions, said after the sale that it was the articles of lesser value which he would take back to Paris, his larger bids having been for American customers. Mr. Fischof would not acknowledge or deny that his American patrons were John Wanamaker, E. Talmas, C. A. Griscom, and W. E. Leech.

Vital Benguiat, who made the record purchase at the sale yesterday, and bid large prices successfully for the tapestries, was, according to those who have been most accurate in their information regarding the sale, buying solely for Senator Clark. He was not pleased when spoken to about it, but later and earlier he denied saying that he would sell to-morrow morning any of the things he had bought yesterday for reasonable advances on the prices he paid.

The scene of yesterday afternoon's bidding was almost unclassed. The big room at the top of the flight of stairs leading to the offices and exhibition rooms of the American Art Association was hung with the rare tapestries and rugs of the collection.

The bidding was lively from the start to the end of the seventh afternoon's sales. The highest figure reached was that of $38,000, the record sale of all, not excluding the paintings. The successful bidder was Vital Benguiat, who purchased a "royal Persian rug of the fifteenth or earlier sixteenth century." It was 11 feet 10 inches in length, 8 feet 1½ inches in width, with 600 hand-tied knots to the square inch. According to the catalogue, the rug is probably as near perfection as the woolen carpet of the East has come. It was a gift from a Persian Emperor to an Emperor of the Turks, as the catalogue states:

"An authenticated record in the possession of its former owner set forth that the rug was among the effects of the Sultan Abdul Aziz of Turkey at the time of his death. The only pieces of this extraordinary character which have passed out of possession of the Oriental rulers and nobles who owned them are now locked in the treasure chambers of other Princes, or displayed in the public or private galleries of Europe.

"In the centre there is a medallion, with what for the sake of clearness may be termed 'escalloped edges,' and depending from this, toward each end of the rug, though with no pretense at actuality, are the temple lamps. Medallion lamp simulacra are both grounded in what has been called the Ispahan red, and upon this, in pink—a faint, unobtrusive, but withal beautiful contrast—other fragile interwoven vine traceries.

"This secret method is a composite background for the superb arabesque design worked in silver thread, the pile yarns apparently having been omitted to allow the metal thread to be attached directly to the warp, in what closely resembles the Soumak or tapestry stitch. A very similar device is also found in the centre of the Ardebil carpet.

"In the innermost space of the medallion, symmetrically grouped, are four birds, evidently of the hawk tribe, drawn with much skill and considerable veracity. Outside the medallion, disposed amid the green in the most lifelike attitudes of flight, pursuit, combat, &c., are the animals which play such prominent parts in the Moslem allegories, and which were, in fact, endowed with such large mythological significance by the peoples of Asia long before the rise of Mohammedanism.

In spite of the black centre, which suggests a mourning carpet, there is the note of triumph, joy, and immortality. In view of the intermittently hostile relations maintained between Persia and Turkey during the era when the rug was unquestionably made, all that is to be read in its design is most vital, and seems expressive of some phase of history, which was then making so vigorously.

E. Fischof, for James Henry Smith, paid the next high price for a "Rare Cloth-of-gold Tapestry, Holy Family—French, sixteenth century." The price was $21,100. This tapestry is 8 feet 2 inches in height and 7 feet in width. It is described as follows in the catalogue:

The Virgin is seated on a pavement of many colors, beneath a baldachino that is supported by four graceful columns wreathed with incrusted ornament. Suspended from the top, in front, is a lambrequin, decorated with cornucopiae and fruit, while the back of the canopy terminates in an arch, through which appears a sloping hill, dotted with trees and houses. The landscape is rendered in soft tones of blue, gray, and green, the details being represented with surpassing delicacy. The Virgin is robed in deep blue, with a drapery of crimson falling from her waist. The infant upon her lap leans forward to squeeze a bunch of grapes into a chalice held by a woman who kneels upon the left.

The pendant figure on the right is that of a woman in blue raiment, who is drawing a sword from its sheath. Behind the group stand five angels in garments of rose and pale plum color, and in the sky appear the figure of the Almighty, and the Third Person of the Trinity in the form of a dove. The panel is enclosed at the sides and has a narrow band of scrollwork, a beautiful feeling of reverential tenderness pervades the skilfully drawn figures, and the color scheme is delicately resplendent. The specimen is unique and of surpassing interest.

SOME OTHER SALES.

Other things from the collection sold yesterday, with their prices, names of purchaser, height and width, were the following:

Grand Gobeline tapestry, Louis XV. period; E. J. La Place, $15,000; 11 feet 8 inches in height, 20 feet 6 inches in length.

Sixteenth century Ispahan, $13,000, Vital Fanquiat; length 22 feet 8 inches, width 9 feet 5 inches.

Persian carpet of middle sixteenth century, $15,000, Vital Benquiat; length 16 feet 2 inches, width 7 feet 1 inch, 196 hand-tied knots (Persian) to the square inch.

Old rug of Middle Persia, silk, $14,100; E. Fischof for James Henry Smith.

Grand piano, $8,000, designed by Sir Alma Tadema, R. A., with painted panel by Sir Edward J. Poynter, P. R. A.; William Barbour.

Old Persian prayer rug, silk, $7,000, Vital Benguiat; length 5 feet 5 inches, width 3 feet 8 inches, 400 hand-tied knots (Persian) to the square inch.

Old carpet of Middle Persia, $7,000, Vital Benguiat; length 9 feet 9 inches, width 8 feet 3 inches, 400 hand-tied knots (Persian) to the square inch.

Visit of the Queen of Sheba to King Solomon, $4,600; E. Fischof; height 9 feet 2 inches, length 10 feet 9 inches; Renaissance tapestry.

Venus allow his thousands and David his ten thousands, $4,000; Fischof; height 8 feet 3 inches; length, 10 feet 4 inches; Renaissance.

Antique Persian prayer rug, $4,100; B. Altman; height 6 feet 6 inches, width 4 feet 3 inches, 128 hand-tied knots (Persian) to the square inch.

Antique rug of Western Persia, $4,000; Vital Benguiat; length, 9 feet 1 inch; width, 6 feet 8 inches; 144 hand-tied knots (Persian) to the square inch.

Chinese rug, $3,100, Fischof; length 14 feet 2 inches; width 14 feet 9 inches, 49 hand tied knots (Persian) to the square inch.

Louis XV. petit point panel, Louis XV. period, $3,000; R. W. Patterson.

Old Persian silk carpet, $2,000, Frank Gair Macomber, Boston Museum; 400 hand tied knots (Persian) to the square inch.

Larousse Rug, $1,500, Col. E. A. Stevens; length, 15 feet; width, 6 feet 4 inches; 88 hand-tied knots (Turkish) to the square inch.

Portuguese Bandrolchino, $1,250, A. Bihmer; length, 13 feet 4 inches; width, 3 feet 6 inches.

Italian Renaissance Panel, $1,000, Mrs. Herbert Sigel; length, 6 feet 8 inches; width, 5 feet.

Interesting as showing the public and professional appreciation of the objects offered at auction, as represented in the total figures for the various days with names of the articles offered in the following:

Friday evening, Jan. 23, sale at Mendelsohn Hall.	
Paintings	$197,095.00
Monday afternoon, Jan. 26, at the American Art Association rooms, where the preceding sales were held.	
Chinese porcelains	22,697.00
Tuesday afternoon, Jan. 27.	
Ten jars, bowls, vases, old Japanese and Chinese potteries, Japanese bronzes	6,052.50
Wednesday afternoon, Jan. 28.	
Engravings, silver, china, subject objects, wood and ivory carvings	28,639.00
Evening sale.	
Mezzotint engravings, dry pencil and other engravings	10,242.00
Thursday afternoon, Jan. 29.	
Roman and Greek marbles, Greek terra cottas, Persian bottles, porcelain globes, antique glass, and Greek ceramics	44,587.00
Evening.	
Books	6,873.75
Friday afternoon, Jan. 30.	
Altar screens, bronzes, pottery, Persian tiles, intaglios, armor	117,289.50
Evening.	
Books	7,015.50
Saturday afternoon, Jan. 31.	
Tapestries, furniture, a piano, and other household effects	224,564.50

Dealers and private persons in looking over the week's sales were, next to the large prices realized, particularly interested in noting the conservatism of the bidding of the agents for the Metropolitan Museum of Art. They knew exactly what they wanted and paid comparatively small prices for the objects they obtained. This was taken as meaning that it is the purpose of the Trustees to be exceptionally careful of the funds in their hands intended for buying new exhibitions.

CHART OF FIXED STARS.

That Is the Purpose of the Dudley Observatory—Appropriation of $5,000 by the Carnegie Institution Will Aid.

Special to The New York Times.

ALBANY, Jan. 31.—Through an appropriation of $5,000 by the Carnegie Institution in Washington the Dudley Observatory here will be able to carry out a plan of determining the positions and motions of the so-called fixed stars. The sidereal system has been made a specialty of this observatory, and announcement is made in the annual report of Director Boss that valuable results will soon be obtained.

"We see the stars upon the sky as points upon what appears like a vast hollow sphere," says Mr. Boss, "all of the stars apparently at the same distance. For the first 2,000 years after the date of the first systematic observations of the relative positions of the stars nothing could be learned as to the motions, nor as to their relative distance from the earth.

"The Dudley Observatory was one of the first institutions to grasp the significance and the possibilities of the newer problems relating to the stars. For twenty-six years our work has been almost wholly devoted to this field of investigation, first on individual works of observation contributing to the information desired, and secondly in dealing with the accumulated information itself.

"Now, the various series of observations of the positions of stars are subject to certain errors of a systematic nature. If this systematic error can be ascertained and the series of observations corrected for it, then the computation of motion for each star, and especially for large groups of stars, can be carried to a much higher degree of accuracy.

"Astronomers have been slow to recognize the force of this truth, and their computations have suffered from the neglect of it. The object of constructing the catalogue of the positions and motions of 627 standard stars is to have a standard of comparison whereby the systematic errors of the various series of observations can be ascertained. It is the foundation of our attempt to ascertain the motions of the stars with a degree of precision never before attained. We have reason to believe that we shall be successful in this attempt.

"Although the greater part of our work on the stellar problems hitherto has been preparatory, the general nature of our work and of its aims is coming to be understood by astronomers. A belief in the importance of what we are undertaking led the directors of the Bache Fund of the National Academy of Sciences in years past to make five successive appropriations of $1,000 each in support of this enterprise. This is a larger sum than ever before has been applied from that fund in aid of any other investigation.

"During this same period, covering the last five or six years, the Trustees of this observatory have contributed in the aggregate more than $6,000 to aid in this work."

He then tells of the appropriation made by the Carnegie Institution.

"Our plans," he continued, "ultimately involve the determination of the motion of all the stars down to the seventh magnitude, with many others of less brightness which are known to be in motion, or which possess a special interest for other reasons. Of these there are about 5,000 of the brighter stars those visible to the eye, which have been observed more frequently than the fainter stars.

"The natural order of our investigation requires that the motions of these brighter stars shall be determined, in the attainment of greater accuracy as to the computation of motion for fainter stars. But as soon as we shall have determined the motions of these brighter stars we shall have the information necessary for applying our principles to a study of the structure of the visible sidereal system.

"That is to say, we make a first essay in the solution of our problem as it relates to the 5,000 brighter stars, instead of waiting until we can apply it to the whole number of stars, 25,000 in all, which have been selected as the basis of the entire investigation. It is extremely desirable, both for its own interest, for its bearing upon the entire work, and for its probable effect in stimulating interest in the entire problem as we have conceived it, that we should arrive at this first result concerning the 5,000 stars visible to the unaided eye, as speedily as possible.

"We ought to arrive at definite results as to these stars within three or four years, and every month we can gain will be greatly to the advantage of the ultimate interests of the entire problem. The importance of reaching comparatively soon some definite results, of the same general nature as those we expect in the end, is sufficiently obvious without further comment."

DOCKERY'S BOOM LAUNCHED.

Special to The New York Times.

JEFFERSON CITY, Mo., Jan. 31.—The Hannibal Journal, edited by John A. Knott, State Railroad Commissioner, has interested political circles by publishing a full first-page declaration in large type that Gov. Dockery is the one man who can lead the National Democrats to victory in 1904.

Gov. Dockery has been thinking seriously of entering the fight, and this announcement by a newspaper owned by another State officer was regarded as being a semi-official declaration that he really intends to enter.

PARKER AND OLNEY BOOMS.

Special to The New York Times.

CHATTANOOGA, Tenn., Jan. 31.—Presidential booms are brewing in both Tennessee and Georgia. In this State there is a movement on in the interest of ex-Secretary of State Richard Olney for the Democratic nomination for President in 1904. Over in Georgia, the friends of Justice Alton Parker of New York are preparing to launch him as a candidate.

The Tennessee Legislature has been asked to pass a resolution inviting Mr. Olney to address it. There is no opposition to the resolution, and it will be adopted. If Mr. Olney accepts the occasion will be used by his friends to put him forth as a candidate for the nomination.

The resolution was presented to the Legislature by Senator Norfleet, who comes from Memphis, where an "Olney boom" was launched some time ago, but was squelched when the latter refused to go there to make a speech.

The boom for Judge Parker is to be launched with his permission at the annual meeting of the Georgia State Bar Association in June. An invitation has been extended to the Judge to deliver an address before the association, and if he accepts his friends will use the occasion to exploit him as a candidate for the Presidency.

The American Riviera.

Illustrated brochure descriptive of the attractive resorts in Southern lands will be mailed upon application to Town and Country, No. 366 Fourth Ave.—Adv.

PATRICK DIVVER BURIED

The Casket Carried to the Church on Mourners' Shoulders.

Crowds in Near-by Streets During the Funeral—Many Tammany Leaders Attend the Service.

Patrick Divver's body was buried at Calvary Cemetery yesterday. The funeral was notable in several respects, but chiefly because of the manifestation of affection for the ex-Police Judge and political leader by people of the city, particularly those of the Second Assembly District. Thousands of persons from all walks in life—city officials, professional men, policemen, firemen, merchants, and men of toil—crowded each other in Madison Street, near Mr. Divver's late home at No. 7, and with difficulty entered the house and viewed the body.

There was a simple religious service at the home, but few save the members of the family and the pallbearers heard it. After that the casket was taken to St. James's Roman Catholic Church, in James Street, several blocks away. The hearse was not employed, but the casket was carried through the thronged streets by the undertaker's assistants.

Following the casket were the pall bearers. Leader Ch[illegible] F. Murphy of Tammany Hall, Daniel F. McMahon, Samuel Wolf, Fritz Lindinger, Jeremiah Cronin, John J. Ryan, Justice Bolte, ex-Senator John F. Ahearn, ex-City Chamberlain Patrick Keenan, and Andrew Bartlett. The several hundred members of the Patrick Divver Association were next in line. Each man wore a crape badge and a strip of crape on his coat sleeve.

At the church the casket was placed on a catafalque before the altar. The Rev. Father James B. Curry celebrated solemn requiem mass. He was assisted by the Rev. Father Gleason as deacon and the Rev. Father Rafter as sub-deacon. The combined choirs of the Church of the Transfiguration in Mott Street and of St. James's Church sang Verdi's requiem mass.

The little church was packed to suffocation. The main section was almost filled by the members of the Patrick Divver Association, and the two long galleries on the sides were thrown open to the public. Great crowds waited in silence outside, unable to gain admittance.

After the religious service Father Curry stepped down from the altar, and, standing beside the casket, delivered a tribute to the deceased, his good qualities, his generosity, his splendid fellowship, and his consideration of the welfare of others. He said in part:

"It would be most unjust before this large gathering of friends of the deceased to pay a parting tribute of respect and affection to the big, generous-hearted man who is dead. Amid the gloom that surrounds these obsequies there is still a ray of sunshine and encouragement because of the many good and kind things that can be said of him. He was not a master hand, he was a man of his own making, simply hewn out of the rough block. He advanced not through political trickery, but by fair dealing and by the aid of his own popularity, which was the real secret of his success.

"He won his way into the hearts of every one by his many kindly deeds and gentleness of manner. Many of his charitable deeds were known, many others are known but to his widow and children. He was a born leader, and he only needed such a district as ours to lead, for he found always a response in the good-hearted people who emulated him. There are tears flowing to-day, not alone by his bereaved family, but by thousands who mourn him as a friend. He is more beloved to-day than even when he was the idol of the people."

The procession that followed the hearse as it left the church and passing through several east side streets went to the bridge was remarkable. It was more than a mile in length. In the lead were a dozen carriages bearing the members of the family. Then came a like number almost completely filled with the floral tributes of personal friends and civic, political, and religious organizations with which Mr. Divver had been associated. The procession passed up New Bowery to East Broadway, through that street to Market, through Market to Madison, back through Pike Street to Madison, and thence to the bridge entrance.

When the large number of carriages arrived at the bridge all street car traffic was blocked for nearly an hour, and the square in front of the bridge approach was packed with vehicles. It was one of the largest funerals ever held in New York.

Some of those present at the service were:

Congressman Sullivan.
Alderman Sullivan.
Senator Plunkitt.
Ex-Mayor Grant.
City Judge McCarthy.
Justice E. F. McCall of the Supreme Court.
Judge Newburger of the Court of General Sessions.
Borough President Cantor.
Ex-Police Commissioner Phelan.
Clerk Carroll of the Court of General Sessions.
Thomas F. Smith.
Thomas J. Foley.
Coroner Brown.
Patrick Sheehy.
Ex-Alderman Shiels.
Dr. George E. Wilson.
J. Sargent Cram.
James Keating.
Joseph Burke.
John C. Sheehan.
George Scannell.
Patrick Ronan.
John J. Scannell.
John Spellman.

Nearly all of the Tammany district leaders, Aldermen, and Assemblymen were present.

PRESIDENT BURLINGHAM OUT.

Resignation of the Board of Education's Head Accepted—Business Reasons Given.

It was announced that at a special meeting of the Board of Education, held yesterday, President Charles C. Burlingham of the board had tendered his resignation, which was accepted. The reason for Mr. Burlingham's resignation, it is said, was because he found the press of other business too great for him to attend to his duties properly.

The transfer and promotion of 400 teachers also took place at the meeting, and was approved by Superintendent William H. Maxwell of the city schools. The transfer and promotion was held up for some time by an injunction granted to Miss Baum of the Brooklyn Teachers' Association by Justice Gaynor of Brooklyn. This injunction was vacated last Friday.

It was also announced that 200 teachers had been appointed at the meeting.

FOSTER'S BROTHER MISSING.

Belief Is That His Oyster Boat Was Upset by Gale on Tiana Bay.

GOOD GROUND, L. I., Jan. 31.—Louis Foster, nineteen years of age, a brother of Clarence Foster, who was drowned with Miss Sarah Lawrence in June last, is missing. He was oystering in Tiana Bay late yesterday afternoon.

His oyster tongs were found in the water this morning, but his boat was not found afloat. The belief is that the boat was upset by the gale.

School Children's Theatre Holiday.

F. C. Whitney had 1,000 Harlem school children as his guests at the matinee of "When Johnny Comes Marching Home" at the New York Theatre yesterday. The song

GEN. GREENE REBUKES POLICE CAPTAIN LANTRY

Says His Detectives Had No Right to Enter Private Houses.

JEROME TAKES OPPOSITE VIEW

Some of the Persons Whose Homes Are Said to Have Been Invaded Express Indignation, but Servants Now Are Watchful.

Capt. John J. Lantry yesterday morning awoke to find himself by far the most talked-of man in the New York Police Department, owing to the original means he had taken the day before to prove that all a thief had to do in order to enter the homes of the rich in his precinct was to go to the house, open the door, walk in, and help himself to anything that might strike his fancy. The Captain at first, when he read the papers and saw all the space given to him and his sleuths, chuckled softly. It is said, and waited for the letter of commendation he was certain would be forthcoming from Police Headquarters.

The precinct commander was not disappointed and did get a letter early. It came from Headquarters, too, but what a different epistle from the one that he had hoped was to come! Gen. Greene yesterday morning just as soon as he recovered from his surprise at what the newspapers apprised him Capt. Lantry had seen fit to do, hustled down to his office on Mulberry Street, and, calling his Secretary, dictated the following letter to Capt. Lantry:

Capt. John J. Lantry, Twenty-fourth Precinct—

THE Police Commissioner, as reported in this morning's papers, in sending plain clothes men to enter private residences in your precinct for the purpose of showing that these residences could be entered by burglars, is not approved, for the following reasons:

1. Such action, if justifiable, will in no case be taken by a police Captain without previously obtaining the approval of the head of the Detective Bureau or of the Chief Inspector of Police.

2. Rule 46 makes it the duty of the police to see that the doors of houses are properly protected, but they have no right to enter houses for this purpose, and their actions should be limited to giving notice to the occupants by ringing the bell and otherwise calling their attention to the unprotected condition of the house, but without entering it.

While it is desirable that the owners of residences should have their attention called to the fact that, through carelessness in leaving their doors open, their houses can easily be entered by sneak thieves, yet the method adopted by you to call attention to this was in excess of your authority and it is not approved.

FRANCIS V. GREENE, Commissioner.

The sentence "through police channels" was the part of the letter most commented on by policemen, and it was taken to mean that hereafter Gen. Greene would appreciate it if Police Captains would notify him when any unusual or spectacular things were to be done, so that he would not have to wait until morning to find out what had taken place from the papers.

The Captains, "said Gen. Greene, "must learn that they cannot run their precincts to suit themselves. When they decide to do anything quite so unusual as this they should consult their superiors before taking action. I am here, then there is the Chief Inspector and the Borough Inspector, and we are all ready to give advice and counsel when necessary. Suppose one of these men up in the Twenty-fourth Precinct had been shot while in a house. I do not see exactly how the man who did the shooting could have been prosecuted, under the circumstances."

MR. JEROME'S VIEW.

District Attorney Jerome, on the other hand, expressed his approval of Capt. Lantry's action.

"I am led to believe that it was entirely justified, from the stories that appeared in this morning's papers," he said. "He had been informed that the residents of these houses had not taken the most ordinary precaution against burglars. This information was given him by a burglar whom his men had arrested. He started out to prove the truth of the man's statement for the benefit of the residents of the houses. He proved it, evidently, and so long as the detectives did not break into or make forcible entrances I think he was acting properly."

Capt. Lantry, when he got his letter, went to Police Headquarters and received from Gen. Greene a little talk along the same line as in the letter. He seemed greatly put out—in fact, hurt—at the unexpected turn affairs had taken, and showed plainly that he had expected quite different treatment. While the opinion at Headquarters was unanimous that Capt. Lantry did what he did with only good ends in view, many persons seemed to think that the action taken was unwise.

Especially did the people whose houses are said to have been entered fail to appreciate the unceremonious calls of the plain clothes men. Several were indignant, and Dr. Roswell D. Stebbins, who lives at 4 East Forty-third Street, said he intended to complain to Headquarters about the "outrage," as he called it, perpetrated by Capt. Lantry on the citizens of that part of the city.

"Why, this is about the most outrageous affair I have heard of in months," said Dr. Stebbins. "Am I going to do anything about it? I most assuredly am. Why, just think of it! Some men say they went all through these houses and nobody saw them! They want to let all the thieves in the city know where we live, I suppose. Yes, Sir, you can say that I am going to report the whole affair to Police Headquarters.

"They have gotten in here, but if they did it passes my understanding how they did it, for certain it is that there are plenty of people about, some of whom must have seen them. Then, if they came through the basement, they would have been confronted by one of the most vicious dogs in New York, and it must have been the first time on record that the beast failed to bark at strangers. Just think of all this alleged information going the rounds about the unprotected houses up here. Why, the thieves will conclude that we are about the easiest lot on earth, and forthwith commence to operate around here."

At 75 West Fifty-fifth Street, where Dr. Raymond Guiteras lives, it was said that the police had called there the day previous. John Welch, the janitor, is in charge of several houses on that street, and it was he that did the talking concerning the part that Dr. Guiteras's house played in the general round-up of Capt. Lantry.

"Yes," said Welch, "two detectives came here yesterday. I was in front of the house at the time and one of the men approached me and asked why the basement door was not locked. I answered that I had charge of the house and that I did not see any sense in keeping the door locked while I was in front of the stoop. He then asked me who lived next door and when I told him that Mr. Salisbury lived there he said good-bye and went up the stoop. This is all they did, so far as we are concerned.

"As for getting into Mr. Vanderbilt's house on West Fifty-second Street, I do not see how that was possible. I went to that house a few days ago with a friend of mine named Brown, who does a lot of expert work for people who have homes at their seashore. I wanted to see the place, and as Brown had to get a trunk out of the house, I went around with him. I do not know how the officers fared, but I do know that it required a lot of talking for us to get in, and we had business there. I do not believe that the police say they had trouble getting into it. It is 27 East Forty-fifth, the dressmaking establishment of Miss Baldwin. According to William Johnson, who is employed by Miss Baldwin, it was about noon Friday when the detectives arrived.

"Several of the girls were going out to lunch," said Johnson, "and I had just let two out, when the two officers brushed past me and came into the house. I was, of course, startled at first, and when the men said they were policemen I asked them what they wanted. One asked me why I didn't keep the door locked, and I told him I did, except when people wanted to get out. What's all a mistake about this place being entered so easily. Why, we have to keep Bob, the Scotch terrier, up. We have always had that dog twice already, and I don't intend to let him get away if I can help it, and therefore I always keep the door locked."

AT THE VANDERBILT HOUSE.

At the home of William K. Vanderbilt, 2 West Fifty-second Street, James Lovegrove, for almost a score of years Mr. Vanderbilt's butler, was emphatic in denying that Detective Byrnes had been able to enter and closely inspect the premises without being detected.

"It is all ridiculous," said Lovegrove. "It could not have been done, and I have had a rigid examination of the servants and am unable to verify the story at all. Again, Mr. Vanderbilt was here at the time the supposed visit was made, and he would have known it if any such thing had taken place."

Whether Byrnes did see the art treasures in the Vanderbilt residence or not, is therefore, according to Lovegrove's statement, open to question, but his fellow-officers say Byrnes must have got in because he knows more about art now than any man in the department.

"You just ought to hear that fellow talk about them pictures," said the doorman of the East Fifty-first Street Station last night. "There ain't a thing from women's heads to horses that he don't know all about to-day, so far as paintings are concerned. He is a wonder, certainly, and it's a pity they couldn't use him at the Marquand sale, for with what he knows now he must have come in pretty handy."

As the story current at the station house goes, Byrnes and Heyer were the men called upon to prove that the mansion of Mr. Vanderbilt could be easily entered for the purpose of burglary. Byrnes was selected to make the entrance, Heyer remaining outside. The door was unlocked, Byrnes says, and he walked in. For perhaps a minute he stood still, in order to let his eyes get used to the rich things that were all about him. In reporting the visit to the station Byrnes, according to his brother officers, said, in substance:

"Naturally I was quite surprised when the door yielded so easily and I wondered why the servants had been so careless. Of course, in a certain sense, I had no right to go inside, but I was on duty and was trying to keep people from being robbed. Everything in the house was quiet, in fact the stillness was almost depressing, the only thing I heard being the ticking of a clock somewhere. I waited a little while, and when nobody came down I started up stairs. I looked at the beautiful pictures and some of the decorations and I could not help but wonder at the easy time a crook would have in that house.

"All this time I was expecting somebody to come along and ask me for my card or try to ascertain my business, and when no one came I went back to the door and rang the bell. When the servant answered the bell I told him who I was, and warned him to keep the doors locked, and then told him what I had done. I thought the fellow would appreciate the kind spirit in which the advice was given, but he seemed to take affront, and said that I had no right in the house. I don't know, but I do not see why the owners should kick on account of our having proved that all their servants are not as vigilant as they might be."

Byrnes also visited the home of C. O. Iselin, at 3 West Fifty-second Street. There he got in without any trouble, the door being unlocked. He stood in the doorway several minutes, he says, without being detected. He was in the doorway long enough according to his calculation for a thief to go up stairs and get what he wanted. Then he rang the bell and told the servants that they should be more careful.

None of the other detectives made such instructive visits as Byrnes. Detective Heany said he went to houses on probably twelve streets, but did not make any extended explorations. When he found the doors unlocked he would look around a moment or so and then ring the bell and notify the servants. Martineau, Ray, Dicker, and Hallohan were loath to talk at length, especially after they heard of what Gen. Greene had done, and said they had only rung the bells and told the servants to be more careful in the future.

WHAT CAPT. LANTRY SAYS.

Capt. Lantry, who in the morning had been very communicative, and also proud of what he had done to make people in his precinct more careful, was not so communicative in the afternoon. However, he answered all questions briefly and courteously.

"Captain, are you entirely satisfied with the results obtained?" he was asked.

"Yes, I am, but it was not any experiment, as some people seem to think," he replied. "I only desired to warn these people to be careful in the future, and my instructions to my men were to try the doors and if they found them unlocked to ring the bell and notify the servants. It is untrue that I carried my notebook around to take down data."

"Have you received any protests from residents in regard to the actions of your men?"

"No. I have not, although in some cases my men were abused for their zeal. We were simply good Samaritans trying to do these people a good turn."

"Are you responsible for all that was done?"

"Yes, it's true that I did not receive orders from headquarters to do what I did. I alone am responsible. I only told the men to go to the houses, and when they found a door unlocked to ring the door bell and warn the owners."

"Is this the first time the police have warned people on such a large scale?"

"I guess it is."

"What caused you to take the action you did?"

"Charles Gerry, alias Beckett, one of the men concerned in the burglary at Mr. E. Parmalee Prentice's home, gave me the information that caused me to take the action I did. Gerry said it was easy to get into the homes of the wealthy, that the doors were seldom locked, and as he expressed it, it was a 'cinch' to enter them in the daytime, secure valuable things, and get away without being caught. I wanted to see if he was telling the truth, and the result indicates that he was."

"Do you believe that some of your detectives explored these houses as reported without being detected?"

"No. I don't believe a word of it. If they did go through the houses, they did so without orders from me."

"How about those places with watch-dogs; you do not think they got past the dog unmolested, do you?"

"I do not know anything about the dogs. The only thing I know is based on the reports made to me by the men."

"What did Gen. Greene say to you in his office this morning?"

"About what he did in the letter."

"Will the warnings be kept up in this precinct?"

"I don't know. If the residents won't pay attention to them what can I do? They must keep their doors locked if they want to save their valuables; that's certain."

The justification for entering the houses under which Capt. Lantry says he acted is Rule 46 of the police regulations, which reads:

"Policemen, while on patrol duty, shall frequently examine all doors, low windows, area gates and gratings of buildings on their posts, and investigate all suspicious circumstances that may present themselves to them."

In the district visited by Capt. Lantry's men it may be said with certainty that there were very few unlocked doors yesterday.

"Every butler, every bellboy, every cook, every chambermaid, and everybody else who works in the houses in this neighborhood is attending to duty to-day. There is not the least doubt of that, and they won't forget the lesson learned Friday very soon either," said a policeman on Madison Avenue and Forty-fifth Street yesterday.

TWO NEW POLICE CAPTAINS.

Sergts. Joseph Burns and John J. Farrell Promoted—Six New Sergeants.

Capt. Joseph Burns and Capt. John J. Farrell are the latest police officers to attain commanding rank, both having been promoted by Commissioner Greene yesterday, when both were Sergeants serving in the West Forty-seventh Street Station. Capt. Burns was assigned to the Church Street Station, where he long did duty as roundsman, while Capt. Farrell was sent to the Old Slip Station. Both are young for their places, and Gen. Greene in announcing their promotions referred to this as a reason why they should make reputations. Both had been highly recommended, and in the case of each, he said, he had made a personal investigation which had convinced him that they were fitted for higher rank.

Capt. Burns is forty years old. He was appointed Jan. 12, 1889, made a Roundsman June 7, 1892, and a Sergeant Feb. 9, 1894. He is a brother of Wardman Burns, who disappeared as a result of disclosures at the Lexow investigation, and who returned a short time ago only to die.

Capt. Farrell is thirty-nine years old. He was appointed Oct. 23, 1893, made a Roundsman Dec. 8, 1899, and a Sergeant May 1, 1894. He has the distinction of a spotless record.

In appointing Burns and Farrell the Commissioner passed over the names of Sergts. Lynch and Rooney.

Gen. Greene promoted the following Roundsmen to Sergeancies:

Charles S. Northrup, Greenpoint Station.
Jeremiah Murphy, Leonard Street.
Henry Breen, Fourth Street, Long Island City.
Charles Nichols, Humboldt Street.
James E. Fleming, Central Office.
George Cheriton, Gates Avenue.
Joseph J. McCann, West One Hundred and Twenty-fifth Street.
Daniel O'Connell, Tompkins Avenue, Brooklyn.

"PUT-UP JOB," SAYS GANNON.

Convicted ex-Police Captain Says He Did Not Have a Fair Trial—Blames Moss and Jerome.

In his cell in the Tombs yesterday ex-Capt. James Gannon, who was convicted on a charge of neglect of duty in Recorder Goff's court on Friday and ousted from the Police Department the day before, gave out an interview in which he declared his conviction the result of a "put-up job."

"I did not curse the jury or call them names," he said, referring to the torrent of abuse for all concerned with which he received the verdict. "Whatever I said was directed against the county detectives, who are nothing but a lot of stool pigeons. I did not criticise the Judge, but I firmly believe that Capt. Piper's decision, by which he ousted me from the police force, was intended to influence the verdict of the jury. And Jerome is back of the whole thing. Piper and Greene and everybody at Police Headquarters do just what he tells them to do.

"I did not receive a fair trial. My counsel was not permitted to call five or six witnesses whose testimony was vital to the defense. Jerome set out to do me, and he kept on pounding me until he got me. Sandford went on the stand, but he does not tell what he knows. He says what Jerome directs him to say. Nobody knows better than he that I merely followed the raiders into the Webster House. But what difference would it make, anyhow, even if I was there that night? I had been there many times before and I have been there frequently since."

Gannon said that his trouble with Mr. Jerome was due to the influence of Frank Moss, who brought pressure to bear on the prosecutor to pay off an old grudge he had against Gannon. One of his wardmen, Tierney, he said, had arrested one of the agents of the Parkhurst society.

"Frank Moss insisted that I transfer Tierney, but I thought my man was justified in making the arrest and declined to transfer him. Then Frank Moss went after me, and that was how the trouble began."

Recorder Goff will sentence Gannon on Tuesday.

GEN. GREENE IN BROOKLYN.

Makes Second Tour of Inspection, Accompanied by Deputy Ebstein.

Police Commissioner Greene paid another visit to Brooklyn yesterday afternoon and made an automobile tour of the southern precincts of the borough. Gen. Greene was accompanied on his trip of inspection by Major Ebstein, First Deputy Commissioner of Police.

The Commissioner stopped at the Adams Street Station, in the Borough Hall district, and then went to the stations in Prospect Park, Flatbush, Parkville, Fort Hamilton, Sheepshead Bay, Coney Island, and Bath Beach. While on the trip Major Ebstein had opportunity to give the Commissioner a good idea of the extent of the territory covered by the police in Brooklyn's suburbs and to point out to him some of the posts of great length and breadth which policemen are expected to patrol.

TWO HEROES OVERLOOKED.

Policemen Who Distinguished Themselves at Cigar Factory Fire.

Policemen Patrick Colleary of the Broadway squad and Francis Fitzpatrick of the Mercer Street Station are heroes whose names were forgotten in the distribution of honors to those who saved lives at the cigar factory of Leopold Miller & Son's a week ago.

Gen. Greene received a letter a few days ago from Alexander Schloff of 618 Broadway, who said that from a window at the rear of his establishment, which extends back to Crosby Street, he had seen Colleary rescue six women at great peril to himself. Acting Inspector O'Brien was directed to investigate and found the story true. Fitzpatrick, who is one of the largest men on the force and an athlete, had just left Police Headquarters at the time of the fire. He was the first policeman to enter the building, and he rescued two women from the fire escapes. His name, like that of Colleary, who was the second policeman to enter, was omitted from the report which Capt. Titus was ordered to prepare in regard to the tragedy. A supplementary report will now be made.

SHOT DOWN AT HIS DOOR.

C. B. Allison of Pittsburg Aroused at Night and Wounded by an Assassin.

PITTSBURG, Jan. 31.—C. B. Allison, a well-known electrical contractor of this city, was called to the door of his home at Sheridan, a suburb, at 1:45 o'clock this morning, and shot down. The bullet entered Mr. Allison's left side, but it is believed he will recover.

Mr. Allison was awakened by loud ringing and knocking at the front door. Taking his revolver, he descended and opened the door, but no one was there, so he stepped out on the porch. He was peering into the darkness, when a shot was fired from the side of the house, and Mr. Allison fell, shot through the side. He quickly raised himself by the porch railing, however, and fired three shots after the assassin. Mrs. Allison dragged her husband inside the house, and a physician was summoned.

No reason is known for the attempt on Mr. Allison's life, and the identity of the man who fired the shot is a mystery. It is said that an infernal machine was sent to Mr. Allison last Thursday, but it failed to work when the box was opened.

This morning it was said that the shooting is the result of political trouble which Mr. Allison has had in the borough. Another reason given for the shooting is that, by some, it is thought, Mr. Allison is connected with the anti-Saloon League, as the box containing the revolver was directed to "C. B. Allison, Secretary of the Anti-Saloon League, Sheridan, Penn." It is denied that Mr. Allison is in any way connected with the league.

MANSFIELD BUYS A YACHT.

Actor Purchases the Prize-Winning Schooner Amorita.

Special to The New York Times.

BOSTON, Jan. 31.—Richard Mansfield, now playing "Julius Caesar" at the Colonial Theatre, has purchased a yacht. The vessel is the famous schooner Amorita, which has won more prizes than any yacht of her class afloat.

The boat was designed for W. Gould Brokaw by A. Carey Smith, and was built in 1895 by the Harlan & Hollingsworth Company of Wilmington, Del. Thomas N. McKee of Fitchburg purchased her only last year. The schooner's measurements are 90 feet waterline, 99.5 feet over all, and 20 feet beam.

MAY SELL A FAMOUS CHURCH.

Mountain Ash That Flourished in a Tower May Disappear.

Special to The New York Times.

UTICA, Jan. 31.—During the last few years the business part of the city has been steadily growing up about the Church of the Reconciliation, on Seneca Street, and now the Trustees have been asked to place a price upon the property.

The church has become famous throughout the land because of a mountain ash tree which flourished in its tower far above the street, getting its nourishment from showers and entwining its roots among the rocks of the tower. The origin of the tree was always a mystery.

It is understood that the Trustees of the church consider very favorably the suggestion of disposing of the present edifice for business purposes and moving further up town.

YACHT LA BARBARA WRECKED.

Went Ashore Near Jupiter Inlet, Fla.—All on Board Escaped.

Telegrams which reached this city yesterday reported the loss of the auxiliary centreboard yacht La Barbara belonging to Dr. E. M. Culver of this city, twenty miles south of Jupiter Inlet, Fla., Thursday night. Only the crew were on board, and all managed to escape and even saved some of the vessel's costliest fittings after she ran upon the beach. Dr. Culver, with Mrs. Culver, who is the daughter of Senator W. A. Clark of Montana, had intended to spend the greater part of the Winter cruising on the boat, but at the last moment changed their minds about sailing from New York in her, and determined to join her at her destination, Miami, Fla.

The vessel was commanded by Capt. J. Lund of Florida. She was 68 feet long, 15 feet beam, and drew but 2 feet 10 inches of water with a depth of hold of 5 feet 5 inches.

Steamship Condor's Chief Officer Killed.

Thomas Coleman, chief officer of the steamship Condor of the Grace Line, was killed instantly on board the vessel, at the foot of Main Street, Brooklyn, yesterday afternoon by being struck by a case of oil and knocked into the hold. His wife was on board the vessel. He was thirty-eight years of age.

PEREGRINATIONS OF A BILL

It Was for $10.50 for Chairs Loaned to the City.

Its Passage Through the Various Municipal Departments Before It Could Be Paid Cost Over $100.

New York's method of carrying on public business and the bookkeeping system of the various city departments has been attacked frequently of late. The Merchants' Association declared that a rigid investigation was necessary and that the entire system should be revolutionized. Mayor Low became interested in this matter and appointed Worthington C. Ford, one of the leading statisticians employed by the Government at Washington, to do the work. Mr. Ford did not take up his duties in New York, and the Merchants' Association are now considering what they can do to remedy the defects in municipal bookkeeping.

An example was brought to light last week through the records of the Board of Aldermen and of the Controller's office. An investigation by a New York Times reporter showed that it cost the city more than $100 to pay a bill the total amount of which was $10.50.

Thomas Sullivan loaned to the city during the reception to Prince Henry of Prussia, held in the City Hall, six dozen camp chairs. There was a slight delay in presenting the bill, but Mr. Sullivan was compelled to wait until last week before receiving his money. In the meantime the travels through the various city departments of the voucher have been amazing.

The bill first appeared before the Board of Aldermen, and by the following resolution it was declared that Mr. Sullivan should get his $10.50:

Resolved, (by Alderman Devlin,) That the Controller be and hereby is authorized and requested to pay the bill of Thomas Sullivan amounting to $10.50, for the use of six dozen camp chairs in the Aldermanic Chamber on the occasion of the reception of Prince Henry of Prussia, the amount to be charged to the appropriation set aside by the Board of Estimate and Apportionment, amounting to $1,500, in accordance with the provisions of the resolution adopted by the Board of Estimate, Feb. 10, 1902, published in Section 8, Section 188, of the Greater New York Charter.

This resolution was printed in full in The City Record. It was referred to the Committee of Finance of the Board of Aldermen and at the following meeting the report of the committee, including the resolution set forth, was reprinted with the report of the committee favoring the payment of the bill. This report was signed by Herbert Parsons, William T. James, Frank W. Longfellow, and James E. Gaffney of the Finance Committee. The date of the report was May 23, 1902. In the City Record there was printed under General Orders No. 72 the record of the bill of Thomas Sullivan for the use of the chairs. After this record had been printed 23 consecutive times in the calendar of the Board of Aldermen, the resolution was finally put through and received the signature of Mayor Low.

"I have made a careful estimate," said an official yesterday, "and it is safe to say that the city has expended more than $100 in the printing and the clerical work incident to the passage of that bill of $10.50 through the Board of Aldermen. This bill could have been put through expeditiously, and if promptness marked the work in carrying on small business matters, New York City would be saved hundreds of thousands of dollars every year."

Although the bill was formally approved by Mayor Low, the end was not yet, nor could Mr. Sullivan get his $10.50. After the clerks in the Mayor's office had entered in their various books the passage of the ordinance authorizing the payment of the bill and it had again been printed in The City Record as an approved paper, a copy of the resolution was certified to by City Clerk Scully and sent to Controller Grout.

The bill next went to the receiving clerk in Controller Grout's office, who copied it on a voucher and filed it away. The bill was then entered in a borough book and the name and amount of the bill entered on the register; also on the claimants ledger, kept to prevent bills being sent in twice for the same work. This done the bill was carried to the Inspectors' Bureau. It was handled by one of a staff of eighteen Inspectors, who had the power to find out whether Mr. Sullivan was charging more than the market rate for the use of the camp chairs. The bill was next passed to the Examiners' Department and an examiner passed upon its correctness as to amount, form, &c., after which it was handed to a warrant clerk who attached a warrant and sent it to another clerk whose duty it was to ascertain whether there was any lien or assessment against Thomas Sullivan. He stamped it and sent it on to the registry clerk, who recorded its progress in the register.

Next it passed to the auditor's room, where it was examined by the chief auditor or one of his eight assistants. The registry clerk then recorded the progress of the bill and placed the initials of the examining auditor in the register. This done the bill was deposited in a series of bins from which it was taken to the Bookkeepers' Department of the Finance Department. It was entered in the day book under the title of the "account."

The fifteenth move in the Controller's office was to enter the bill in the "Abstract Ledger." This book is balanced every day so that the Controller can tell at once how the city stands in any department. All the amounts paid out are balanced against the appropriations. The bill was next entered in the journal, used as a check on the day book and abstract ledger, examined by one of the heads of the bookkeeping department to see whether it was properly drawn, and then it was signed by the Deputy Controller. The Registry Clerk thereupon recorded the number of the bill in the register.

Mr. Sullivan's voucher for $10.50 was now carried by messenger, in a big batch, to the Mayor's office, there to be entered in a book signed by the Chief Clerk, while the Registry Clerk recorded the signature of the Chief Clerk, with date, in the Mayor's register. Then the City Chamberlain signed the voucher and had it fully recorded in the books of his office, after which the warrant was detached from the voucher and mailed to the claimant.

All this detail work was done by well-paid officials, and the $10.50 bill went through the hands of ten officials receiving from $3,000 to $4,000 per annum.

Thomas Sullivan's voucher receipted for $10.50 was received last week and placed with hundreds of thousands of others in the record room, and it will probably never again see the light of day.

CLEARANCE RECORDS BROKEN.

Yesterday's Total $24,977,748—The Sub-Treasury Had a Credit Balance of $2,664,356.

The balances at the Clearing House yesterday broke all previous records in volume. The grand total was $24,977,948. The nearest approach to this figure was in July, 1902, when the total was $24,943,000. The showings of the leading banks gave rise to much speculation and conjecture. The First National Bank, for instance, had a debit balance of $12,600,000, which was partly offset by credit balances of the National Bank of Commerce and the American Exchange National Bank. The debit balance of the National City Bank was over $8,000,000.

The unusually large credit balance of the Sub-Treasury at the Clearing House, amounting to $2,664,356, was due to the payment of a note and interest to the Government of about $3,000,000 by the Central Pacific Railway of California.

A meeting of the Clearing House Association will be held next Wednesday for the purpose of discussing some proposed amendments to the constitution so far as it relates to trust companies. The Clearing House Committee has been considering this matter for some time. The matter of charges for check collections will also be taken up, as several banks have asked for a clearer interpretation of the rules regarding this branch of the business.

Pliny Fisk Sells His Seat.

Among the changes in membership of the New York Stock Exchange which were announced yesterday was the transfer of the seat of Pliny Fisk to Charles F. Binkley. Mr. Fisk has been a member since 1893, but has not been active for the last three years. The dissolution of the firm of Offenbach and Moore, which was connected with the crash in Webb-Meyer securities, was also announced.

French Cooks' Ball and Exposition.

The thirty-seventh annual ball of the Benevolent Society of French Chefs will be given in Madison Square Garden on Tuesday. In connection with the ball there will be an exhibition of creations of culinary art of various kinds, including set pieces composed of meats, game, &c., pastry, cake, and breadstuffs.

NEW YORK'S CHILD LABOR WORSE THAN SOUTH CAROLINA

Be City Superintendent Maxwell Asserts—The Entire White Race of the South Being Killed, He Says.

In an address at the annual dinner of the Doctors of Pedagogy of New York, Dr. William H. Maxwell, Superintendent of Public Schools of this city, declared in the most positive tones that child slavery was worse in this city than in South Carolina.

"When you go back to the early years of the nineteenth century," he said, "and read the accounts of children's sufferings due to the cruelty of slave-drivers, your hearts are apt to cry out in anguish. Just think of to-day. Think of to-day in these great United States, children five and six years old working from 6 in the morning until 6 in the evening, and at the hardest and most trying kind of labor. These children are being ruined by thousands by the manufacturers. It is killing the whole white race of the South.

"It may be surprising, but it is the absolute truth, that things just as bad are going on right here in New York City. Child slavery thrives here in greater proportion than in the South.

"There are parts of this city where little children are driven to work early in the morning for two hours and then sent to our American schools, and after school are forced into sweatshops, where they are obliged to work from 6 in the afternoon until 11 o'clock at night."

NEGROES AGAINST VIOLENCE.

Richmond Colored Men Condemn Sentiments, Credited to Hayes, but Which He Repudiated.

RICHMOND, Va., Jan. 31.—At a mass meeting of representative colored citizens held here the following resolutions were adopted:

Whereas, The public press has communicated to us a certain speech purporting to have been made by our friend and townsman, James H. Hayes, in the City of Washington, which speech, if true, we regard as being incendiary; and

Whereas, The said press publish the fact that the said James H. Hayes was counsel for the colored people of Virginia, now,

Therefore, As citizens of Richmond, we desire to enter our protest and disapproval of the utterances attributed to Hayes, if he has made such a speech in a public meeting in the City of Washington.

We now, therefore, invite the representative colored men of this city to meet us in conference Monday afternoon to take such action as may be deemed necessary to place us properly before the public as colored men engaged in business in the City of Richmond.

James H. Hayes on Jan. 28 delivered a speech before the African American Council in Washington in which he was quoted as saying that the time for peaceful agitation had passed, and that the negro race in America should resort to force, if need be, to secure and hold its rights. At a meeting in the Colleseum Dr. W. Ashby Jones, a member of the Council, said that the reports of his speech were not correct. He admitted that he had never advocated violence, and his assertion was not contradicted by others who were present.

CORNELIUS VANDERBILT'S TRIP.

On the Way, with Mrs. Vanderbilt, to Garnett, S. C.—European Trip to be Undertaken Soon.

Cornelius Vanderbilt, who is convalescing slowly from an attack of typhoid fever, left his home in Park Avenue at 12:30 P. M. yesterday, with Mrs. Vanderbilt, her maid, and a nurse, for the Pennsylvania Railroad Station in Jersey City, where he boarded a train for Garnett, S. C. He expects to occupy for several weeks a cottage that belongs to August Belmont.

As soon as Mr. Vanderbilt regains sufficient strength it is his intention to go to Europe and cruise with Mrs. Vanderbilt on the Mediterranean. The children did not accompany their parents. They will remain with Mrs. Vanderbilt's mother, Mrs. R. T. Wilson, at 241 Fifth Avenue. Dr. Austin Flint, Jr., who has attended Mr. Vanderbilt through his long illness, spent about an hour with him yesterday.

IN MEMORY OF MRS. PALMER.

Service in Honor of the Late President of Wellesley College.

Special to The New York Times.

CAMBRIDGE, Mass., Jan. 31.—Four college Presidents paid tribute to the memory of another President at Appleton Chapel, Cambridge, this afternoon, when the friends of the late Mrs. Alice Freeman Palmer assembled to hear the last high eulogies of the former President of Wellesley College. The service was a beautiful and impressive one.

After the chorus from Mendelssohn's St. Paul, prayer was offered by the Rev. Francis G. Peabody, an eloquent address given by James B. Angell, President of the University of Michigan.

Addresses were also given by Caroline Hazard, the present President of Wellesley, the Rev. William Jewett Tucker, President of Dartmouth College, and President Eliot of Harvard. The Wellesley College choir sang appropriate hymns.

Free Sons of Israel Building.

District Grand Lodge No. 1 of the Independent Free Sons of Israel has under consideration plans for the erection of a building in some central location which shall combine the functions of clubhouse, lodge rooms, and home for such of the members as may desire apartments. The site, it is reported, will cost about $60,000, and the building will require an outlay of $140,000 more. When completed the business offices of the Grand Secretary and Executive, General, and other committees of the United States and District Grand Lodge, No. 1, will be situated in the building. The order has a membership of about [illegible] in this city.

WIGS

for Ladies Having THIN HAIR

When the hair has become thin in a single night, it is due to some local disease. Apply Parisian Hair Tonic, all dealers. Are you detected? Harmonize with the contour of wearer's face. Capillaria iron not required, as they always retain their naturally wavy condition. Non-exclusive production.

CURLY BOBS, WAVES, CACHES, POMPADOURS, Half Wigs for Elderly Ladies, TOUPEES for Gentlemen. HAIR DRESSING. Scalp Treatment and Manicuring.

L. SHA[illegible]

54 W. 14th

Herald Square. **Saks & Company** Broadway, 33d to 34th Street.

Wash Dresses for Girls.

A Foretaste of Spring.

Innovations in effects and colors, in materials and elaboration, mark the advent of the new season's apparel. The following are Guimpe, High Neck and Blouse models of various fabrics trimmed with lace embroidery, and fancy braids. The sizes are from six to fourteen years.

Of Percale or Crash, Guimpe, High Neck and Blouse effects, in a variety of colors. At 95c.

Of Dimity, Chambray or Percale, three styles, High Neck, Lace trimmed; Guimpe, trimmed with pique, or Blouse with embroidered emblem and braid effects. At $1.50

Of Chambray in various colors, Guimpe effect, trimmed with fancy pique and embroidery. At $1.75

Of Dimity, striped or figured, Guimpe model, fancy Bertha trimmed with lace insertions and edging; long waist effects. At $2.25

Of Mercerized Chambray, Guimpe effect; deep Bertha of embroidery. At $2.90

Wrist Bags

have found universal favor. These ought to at this price. They are perfect in finish and detail.

Of Grain or imitation Walrus leather, nickeled or oxidized frames, of new and exclusive designs. At 45c

New Spring Shirt Waists.

Those presented here are but a hint of what you may anticipate. At intermediate prices, you will find many in the following and other effects.

Of plain colored Chambray, striped Madras or White Pique: full front, French back, stock collar and tie. Value $1.50. At 98c

Of Bedford Cord, tailor stitched, side button effect, large pearl buttons, gray, tan, cadet, red, reseda, light blue or white. At $4.25

Of Taffeta Silk, black or colored, made and trimmed with fancy stitching. Value $5.90. At $3.95

Dresses for Girls in Service

Their positions demand extreme neatness and dignity in their dress. Quiet colors and good taste in design should be a feature of every garment they wear. The following answer to those requirements:

Of Cambric, in light stripes or figures; three styles, hemstitched yoke, plain, full front and tucked back, or tucked back and front, trimmed with fancy braid. At 98c

Of Cambric, in dark or light shades, front and back of yoke finished with white piping or trimmed with fancy braid. At $1.25

Of Percale, in fancy figures or stripes, various styles of round or pointed yokes; gored skirts, well made and neatly trimmed. At $1.88

Of striped Seersucker or plain Chambray, in light blue, pink or gray, designed for Maids or Nurses. At $1.98

Two-piece Dresses, light colors, tucked back and front; deep flounce skirt. At $1.25

Two-piece Dresses of striped Seersucker, gray or white, in various styles. At $1.75, $1.98 and $2.50

Nurses' Uniforms for hospital service, in striped Seersucker. At $2.50

Dresses of Black Sateen, fancy tucked yoke, gored skirt. At $2.50

Dresses of Black Brilliantine, plaited or tucked front and back. At $4.50

Lingerie for Women.

These are all the garments we have to tell of the success of our January Sale. They will not be with us long at these prices.

Drawers of Cambric, trimmed with ruffle, edged with Valenciennes lace and ribbon. At 45c

Robes of Muslin, high neck, yoke of five deep tucks and ruffle at neck. At 50c

Robes of Nainsook, square neck, with Point de Paris lace insertion; round neck, with Torchon lace insertion and edge, beading and ribbon; of Cambric with tucked yoke and two Valenciennes lace insertions. At 75c

Drawers of Cambric, with umbrella ruffle, trimmed with Point de Paris lace edge and insertion with group tucks. At 75c

Robes of Cambric, square or V neck, trimmed with two insertions and edge of embroidery or surplice neck finished with hemstitched bands. At 98c

Chemises of Nainsook, skirt length, trimmed with embroidered edge. At 98c

Here endeth this story, but the spring styles, both French and Domestic, is another; they are both here in all the glory of their newness.

Women's Hosiery.

Five styles, which include Plain Black Cotton, Black Drop Stitch, Black Cotton with unbleached split feet, Ribbed Lisle Thread with fancy stripes, and Embroidered Ribbed Cotton.

Values 25c. to 35c. At 19c. per pair

Dresses for Children

That are just as dainty in effect and serviceable in material as one could wish them to be, though the prices do not give that impression.

Children's Dresses of Chambray, tucked waist effect; sizes 2 to 4 years. At 75c

Children's Gingham Dresses, French waist, trimmed with embroidery; sizes 2 to 4 years. At 98c

Boys' Russian Dresses of White Percale, [illegible] finished; also a variety of other materials and colors in Russian effect. At $1.25

Boys' Russian Dresses of White Percale, [illegible] with Persian embroidery. At $1.75

Manufacturers' Samples of Infants' long and short Dresses, of French and English Nainsook in a variety of designs, daintily trimmed with fine embroidery or laces.

Values $1.00, $1.50, $1.75 to $13.00. At 75c., 98c., $1.25 to $7.75

Silk Petticoats

know no law of seasons. Their pleasing rustle is music to the ear at all times. Those offered here are of excellent silk, in exquisite shades and effects. The trimming is in perfect good taste.

Of Taffeta Silk with graduated accordion plaited ruffle, trimmed with ruche; plain or changeable colors. Value $6.50. At $4.95

Of Taffeta Silk, light or dark changeable effects, or black; deep accordion plaited flounce edged with ruffle. Value $8.50. At $6.50

CHAMBERLAIN SPREADS DISMAY AMONG THE ENGLISH PRO-BOERS

His South African Tour Rapidly Paving the Way for Peace and Prosperity—British Taxpayers Still Feel the Burdens of the War However—Lord Cromer's Praise of American Missionaries in the Soudan.

Special Cable to THE NEW YORK TIMES. [Copyright, 1903.]

LONDON, Jan. 31.—Politics, religion, and business are the three things in which alone, according to Voltaire, the English take any interest. Without pausing to dispute or examine into the assertion of the witty and cynical Frenchman, it may be admitted at once that these three provinces of human thought and activity have engaged the attention of the public this week to a degree which proves that their importance is in no danger of being underrated by descendants of those at whom the original gibe was directed.

Political questions, apart from the vexatious and dangerous Venezuelan imbroglio, have been by common consent in a state of temporary suspension for the last few weeks. Even politicians require breathing space at times, while, after months of wrangling in the House of Lords and the House of Commons, peaceable citizens have often a mind to exclaim, with Mercutio: "A plague on both your houses!"

But the truce is at an end. With the new sessions approaching, Conservatives, Liberals, and home rulers are entering on those preliminary skirmishes by which more serious engagements at Westminster are always ushered in. On Feb. 17 the King and Queen will open Parliament in state and the London season, with its accompaniment of gayeties and dissipations, will begin in earnest.

English speakers, when addressing great audiences, can always count on an enthusiastic reception for a well-founded panegyric of "the great Mother of Parliaments." The truth, however, compels me to confess that in their moments of ease and relaxation it is their wont to refer to that august institution by the irreverent appellation of "the talking shop." This is a quite recent innovation. No one would have dared to use such an expression in the presence of Mr. Gladstone even when he was in his most genial and convivial mood. If any one had been so audacious the Grand Old Man would have turned his leonine countenance upon him and annihilated him with a glance from his flashing, indignant eyes; those eyes the depth and brilliancy of which no one who once saw them ever forgot.

Possibly this familiar description of Parliament is a sign of the growing distrust and contempt for representative bodies which Mr. Lecky, in his pessimistic book on democracy and liberty, cites as one of the most characteristic features of the closing years of the nineteenth century. More probably, it is merely an indication of the reaction from the staid and formal manners of a prim, punctilious age.

CRY OF BRITISH TAXPAYERS.

However this may be, the talking shop will have plenty of subjects for discussion during the coming session. The taxpayers are crying out for remission of the burdens put upon them, now that the war is over. I attended a banquet given to the Chancellor of the Exchequer this week, at which he promised some remission of taxation, but was careful to warn his hearers not to set their hopes too high.

The fact is, the war expenditure has not ceased with war. There is still a large garrison in South Africa which will be reduced only gradually, each soldier of which costs £50 yearly more for his maintenance than he would cost in England. There is the interest on the large war loan to be paid and there are many other heavy expenses connected with the settlement and pacification of the country to be incurred, so that altogether the outlook for the British taxpayer is not particularly reassuring.

More hopeful signs are apparent in the Transvaal of establishment of good relations between the Boers and the British. Mr. Chamberlain's tour, which continues to be reported at great length in the newspapers, having had most promising results already.

Mr. Chamberlain's trek through the Western Transvaal was certainly the most interesting part of his journey.

"Now that the fight is over," said Mr. Chamberlain at Ventersdorp, "let's shake hands and be friends." It looks as if the country burghers are inclined to act on this excellent advice.

A remarkable feature of the proceedings at Ventersdorp was the impromptu and unexpected speech of Gen. De la Rey, who expressed pleasure at seeing Mr. Chamberlain among them and remarked that he had found the Colonial Secretary a strong man, and he thought Mr. Chamberlain was the man to set things right in South Africa.

Mr. Chamberlain has earned the respect of the Boers by refusing to reopen the question of peace terms. He declined in London when the Boer Generals endeavored to persuade him to do so, and he declined again in Pretoria, where another attempt was made. The Boers respect a man who knows his own mind and can keep to his resolution.

Very many years ago a Boer who knew his countrymen well said: "It is the jerky hand on the reins that makes them jib." Mr. Chamberlain's hand is steady, and the Boers are already showing that they appreciate firmness when it is allied with kindness and sympathy.

SADNESS AMONG PRO-BOERS.

The poor pro-Boers in England are sadly disconcerted by Chamberlain's success with his former enemies. It upsets all their calculations, falsifies all their predictions, and makes them look not a little foolish. "Never prophesy unless you know," is a sound maxim in politics as well as in other departments of life. Had they observed it, the small section of extreme pro-Boers in this country would have been spared much mortification. As it is, they are inclined to withdraw their sympathy from those who have disappointed them so grievously by yielding to the stern logic of facts and grasping the hand of friendship held out to them by Mr. Chamberlain in the name of the British Nation.

Britishers are compelled nowadays to "think continentally," as Alexander Hamilton would have said. While South Africa claims their attention to its pressing problems they dare not forget North Africa, where Kitchener and Milner both served their apprenticeship under Lord Cromer, the great administrator, whose magnificent statesmanship their activities have temporarily outshone. Lord Cromer made a remarkable speech this week in Khartoum, which reminds the people that in five years after the defeat of the Mahdi at Omdurman the Soudan has been reclaimed from sanguinary fanaticism to peace, prosperity, and civilization.

Lord Cromer spoke most highly of the American missionaries on the Sobat River, saying that their work was being conducted admirably. Despite all this progress, however, he insists that the Soudan wants more population, more railways, more irrigation, more British officials, more schoolmasters, more public buildings; in fact, except sand crocodiles and hippopotami, of which there is a superabundant supply, there is not enough of anything in the Soudan.

Will all these wants be supplied? That depends on the moral and financial resources of the British Empire and its continuity of policy. At present there is every indication that the nation will rise to the demands of its great responsibilities.

Frequently of late English education has been adversely criticised. Cromer admits that the English youth are behind those of other nations in book learning, but he maintains that the results of the British educational system are the best seen in countries like the Soudan. A lad, he says, who has been trained in the free atmosphere of the great English schools or military colleges has learned lessons which fit him for his duties as one of an imperial race. He is no automaton, but can think and shift for himself; can take responsibilities and can govern with justice and firmness.

In proof of the truth of this, he adds that there exists all over the Soudan these young Englishmen who are being regarded by the natives as the representatives of a system which debars any return to the oppression and maladministration of the past.

ALASKAN TREATY PLEASES.

The mental process of thinking continentally is again illustrated by the attention bestowed on the Alaska treaty. From the burning deserts of Africa it is necessary to turn to the icebound shores of a country which Kipling excited the wrath of all Canadians by baptising as "Our Lady of the Snows." It is sufficient to say of this treaty that it has met with the most cordial reception from men of all parties here, who rejoice that the difficulties surrounding it have been overcome.

There are geographical questions of considerable complexity to be solved, but it is felt that these by no means exclude a political compromise between nations who count the maintenance of solid friendship worth the trouble of attempting to arrive at a settlement satisfactory to both parties concerned.

Diplomatic secrets are very carefully kept, but one sometimes wonders how much conversation on the burning political questions takes place between the King and the Ambassadors accredited to the Court of St. James's. Prince Metternich dined with King Edward on Tuesday in honor of the Kaiser's birthday, this being in accordance with custom. The Court Circular mentioned this meeting, but I have seen no public reference to the fact that Henry White, the United States Charge d'Affaires, was the guest of Lord and Lady Carrington on Thursday, when the King and Queen visited them at Daw's Hill Lodge, High Wycombe. Their Majesties, who remained to luncheon, each planted, during their stay, a cedar of Lebanon in commemoration of the occasion. That is all the information vouchsafed to the press, but I happen to know that Mr. White was one of the party. Prince Metternich had left Windsor Castle the same morning, so that, although possibly no political significance attaches to it, the fact of Edward's meeting a United States representative immediately after taking leave of the German Ambassador is not without piquancy and interest at the present moment, when international relations are in a condition of some complexity.

I referred in a recent letter to American influence on English amusements, but I was not aware when I did so that I should be able so soon to point to royal testimony to the truth of my assertion. To-night, however, the King of England is being entertained by the King of Marches—in other words, Sousa's Band is playing before Edward "by royal command."

AMERICAN ARRIVALS IN LONDON.

Special Cable to THE NEW YORK TIMES. [Copyright, 1903.]

LONDON, Jan. 31.—Among the late arrivals from America are:

At the Savoy:
Mrs. Joshua Howell.
Miss Howell.
Charles N. Welsh.
Mr. and Mrs. E. C. Ellis.
Mrs. J. Randolph Woodruff.
R. Thompson.
R. A. Wilson.
J. Allison Bowen.

At Claridge's:
Mr. and Mrs. N. G. Lemon.
J. Biddulph Martin.
Miss Z. M. Woodhull.
Mrs. and Miss P. H. Butler.
Lawrence Butler.
Miss J. L. Henderson.
Mr. and Mrs. E. E. Webster.
Mr. and Mrs. Fitzhugh Whitehouse.
Mrs. Percy Chubb.
C. T. Garland.
B. R. Winthrop.
H. E. Hooper.

BRITISH TOPICS BY MAIL

Disquieting Parades of English Coxeyites in London.

Cheap Foreign Labor Crowding Out the British Workingman—Dr. Lorenz's Chilly Reception—Trusts in England.

When Coxey's Falstaffian crew was making its grotesque march to Washington a few years ago "our dear friends in Europe" were convinced the end of the United States was in sight. The Republic lacked the stability to survive such organized demonstration of discontent. But nothing in the Coxey incident equaled the scenes in London within the past few days. There have been not one but many processions of the unemployed, beseeching charity with such exaggerated professions of order that the Pall Mall jewelers thought it prudent to put up their shutters. In the words of one report:

As one looked up from the ranks of the procession at the gorgeous West End shops, crammed with beautiful and luxurious objects drawn from all the world, one could not wonder that to some of these seedy men should come the mad and foolish notion so turn against the city of their suffering.

According to another report:

The pace of the procession was as slow as a funeral march, and at the main crossings traffic was held up for nearly two minutes to allow the long line to pass. The van was led by a little knot of members of the Social Democratic Federation, who carried aloft a red flag and sang the "Marseillaise" in fitful, mourning bursts. The procession was followed by some eighty collectors, who rattled boxes labeled "For the unemployed" in the faces of the passers-by. Now and again some disparaging remark would bring a hot flush to a collector's face, and, generally speaking, a commendable restraint dominated the appeal. In the West End many contributions were handed out from passing carriages, and in the Strand a stately looking equipage drew up while the occupant, a lady, with jeweled hand, placed a gold coin in one of the boxes.

By the time the procession got back to Mile End it was dark, and the counting up of the day's proceeds did not finish before 8 o'clock. Only those men who had met out at 9 o'clock in the morning and had done the whole distance came in for a share of the £99 collected. Each man received 1s. 6d., and that for a nine-hours' tramp through the bitter cold can hardly be termed an excessive reward. The collectors got 2s. 6d. extra.

Still another report says:

Yesterday's procession was split up into four divisions, each headed by a red banner bearing the word "Unemployed." Now and then an attempt at song was made, but it was not the "Marseillaise." It was a chorus which ran something like this:

The poor, the poor, are ever in the way,
They are starving day by day,
They are taking the King's Highway,
The starving poor of Old England.

Sometimes these processions were accompanied by handergans and hurdy-gurdies, with picks, shovels, bricklayers' tools, or other symbols of idle labor conspicuously tied upon them. Sometimes these amateur musicians patrolled fashionable quarters and were well paid to relieve them of their unappreciated presence. When they accompanied processions they swelled the takings to handsome figures. It is said £217 11s. 6d. was taken on one day, and it is not certain that this is the highest sum.

EXTENT OF REAL DISTRESS.

Such demonstrations would seem about equally disturbing whether by the genuine unemployed, or by the disorderly class. Not a few leader writers lean to the latter view, and stoutly urge an unyielding front to such threatening appeals to charity. The official returns show 30,802, or about 5.5 per cent., of unemployed trades unionists. Probably the idle workers not trades unionists are about equally numerous. This is serious enough, but not so alarming as to excuse the parades. There is no Mansion House fund, which is the same as saying the authorities perceive no need for any. And the Charity Organization officials are by no means a unit in thinking the paraders deserving poor, or the aid thus given them well bestowed.

According to the half-yearly statement of the Local Government Board, the proportion of paupers was lower in 1902 than it has been in any year since 1892, with the exception of only two years—1900 and 1901.

London pauperism is relatively always higher than elsewhere, owing doubtless to the tendency of "undesirables" to gravitate to the metropolis. These latest figures show that one in every thirty-eight Londoners is in receipt of pauper relief compared with one in every forty-one in the country.

In 1902 there were 84,907 indoor and 40,953 outdoor paupers registered in London.

UNWELCOME IMMIGRANTS.

The most striking and pitiable feature about these processions was that they were composed of Cockneys. In the United States the very poor are not typically Americans. It is the newly arrived immigrant who are most in evidence doing the worst paid work or giving outward and visible sign of crushing poverty. But London's poor devils are British. There were no foreign laborers, or comparatively few, in these processions. It must not be imagined that there are not enough of them in London to entitle them to representation. Upon the contrary, a surplus of foreign cheap labor is an ever greater grievance than the unemployed British labor. The Poles and Germans are reaping a sweatshop wages, while the British labor is idle. One newspaper has a column daily devoted to evils resulting from unrestricted immigration. These aliens work for nothing, and take the bread out of the mouths of Englishmen who cannot live upon what enriches the foreigner. They live in hovels, rendering entire quarters uninhabitable for more respectable laborers. Their competition drives up rents, to the despair of other renters and the illgotten gain of landlords.

West London feels the presence of the undesirable alien even more keenly than the East End. In Soho, out of about 7,300 people, no fewer than 5,000 are foreigners. Their presence has sent rents up to an almost incredible amount.

Eight shillings a week for one small unfurnished room at the top of a house is now quite an ordinary charge. In many cases it is greatly exceeded; £1 or 25s. a week for three rooms is a common figure.

Foreign tailors, home workers, are among the people who chiefly pay these sums. They are, however, outbid by undesirable foreigners.

In St. Pancras this class of foreigner has largely driven out the better class alien. Whole streets were until recently occupied by the best class of immigrants, skilled workers in the cabinet-making factories near by, metal workers, and the like. Their place is now taken by the criminal and vagabond class. Rents have risen so high that as a rule the honest workers can no longer live there.

Worse yet, these unwelcome guests are dishonest—thieves, blackmailers, and so on—keeping the courts busy, defrauding the charitable, and making England uninhabitable to the English.

In sentencing a foreigner to six months imprisonment for housebreaking, Mr. Loveland Loveland, the Judge of the County of London Sessions, said the case fully illustrated how desirable and necessary it was to check the unwelcome invasion of alien criminals.

At present, he said, the dregs of foreign countries flowed incessantly into hospitable England, and within a few days they were engaged in committing all sorts of offenses.

"The sooner," added his lordship, "Parliament framed laws to prohibit the landing of these undesirables, the better."

Other Judges and magistrates, including Mr. Justice Darling and the late Lord Mayor, have of late been saying much the same thing. The Recorder of London at the Old Bailey, when sentencing a German ship's stoker to a month's hard labor for assault, said:

"It appears, gentlemen, that we have the riff-raff of the whole world pitchforked into this country and we spent days and days at this court every sessions trying these disreputable foreigners. No other country in the world would have such persons."

Sir Forrest Fulton's remarks were received with loud "Hear, hear!" from the jury and others.

A newspaper poet puts the matter into telling rhymes thus:

Let them all come, O let them come,
There's heaps of room in London.
'Tis kind to welcome foreign scum,
Though half our friends are outcasts
To welcome thieves who end in—why,
Is heavenly hospitality.

And what tho' all our Judges sit
A-toiling hard at Yiddish,
Now in the Courts they find that it
Is twice the use of British,
For 'tis our property, not speech,
For which these Poles and Germans reach.

So as go rents and morals down,
And in come foul diseases,
What though it enriches our good town
If foreign towns it eases,
Across the Thames write big and clear,
Friends, please to shut all rubbish here.

It is not too much to say that our Chinese question is not more serious even on the Pacific Coast than is the alien immigrant question in London. It is all very well to be the "refuge of the oppressed of all nations," but we have been obliged to place limits upon our hospitality, and England is well upon the way to imitate us and her own colonies.

DOCTOR LORENZ UNAPPRECIATED.

The repressed enthusiasm of Dr. Lorenz's reception by British doctors has been already mentioned by telegraph, which, however, did faint justice to the ultra conservatism shown by the profession. One account by an expert expressed the hope that "he will adopt the more gentle form of manipulation which obtains in the Royal Orthopaedic Hospital." Others thought Dr. Lorenz's methods not new. Some identified them with the ignorant if often successful work of such "bone-setters" as Dr. Sweet, famous throughout New England. Here is an example taken from an editorial article:

It is a singular fact—and a tribute to Welsh surgical sagacity—that Prof. Lorenz follows a method adopted nearly two hundred years ago by "Dr. Thomas, the famous Welsh 'bone setter,' and his qualified son, surgeons who succeeded him.

This is the view of one vouched-for "authority":

It is quite possible that Dr. Lorenz's orthopaedic treatment is the one which a future generation of surgeons in this country and abroad will perhaps unanimously adopt and approve of. But the fact that some two or three years must elapse before a real test is afforded of the results of the Professor's demonstration certainly justifies one in withholding anything like a positive opinion. I may be wrong in pinning my faith on what are called in some quarters "old fashioned methods of surgery," but until the complete efficacy of the new school is proved to satisfaction I shall certainly continue to do so.

Other more unfavorable views are published, but, as they have been received blue-pencilled at least one New York newspaper office, they are not quoted for a reason which will be understood.

BRITISH VIEWS ON TRUSTS.

British opinion is no more united than American regarding trusts. Prof. Smart and Sir Robert Giffen are the two latest exponents of the laissez faire doctrine.

Trusts have so far done no great harm. There is no call to legislate against them. We see them sometimes, no doubt, threatening, and, to the superficial glance, dangerous at the outset of their operations; wait a little, and we may witness the disruption of the best planned of such combinations on the entrance of competition into the field from which it seemed for ever excluded. That is the purport of Sir Robert Giffen's optimist review of the situation. Prof. Smart regards trusts as, in the main, the elimination of the unnecessary—the unnecessary person, the unnecessary process, the unnecessary machinery of production and distribution. They mean smaller cost of raw materials, the dispensing with costly advertisements, larger shipments, fewer middlemen, and a smaller staff. There is no ground for any pessimistic outlook.

While British theorists are thus complaining practical men are demonstrating that combines can thrive as well under free trade as under protection. That is the lesson of the big—big for the British—locomotive trust. A meeting of the shareholders of Messrs. Neilson, Reid & Co., Hyde Park Locomotive Works, Glasgow, Messrs. Dubs & Co., Polmadie, and Messrs. Sharp, Stewart & Co., Atlas Works, Springburn, has been called to ratify an agreement which has been arrived at between these firms to form a combine. The capital of the concern will be £2,000,000, divided into £1,000,000 5 per cent. preference shares and £1,000,000 ordinary £10 shares. Only the preference shares will be offered to the public.

It has been known for some time past in British engineering circles that a combination of certain large locomotive-building firms was under consideration. The three firms mentioned are among the oldest and most successful constructors of locomotives in the world, and there are very few countries in which the products of one or more of them are not at work. Indeed, it is not too much to say that the history of the development of the locomotive is inseparably bound up with the names of these great houses. The records of Neilson, Reid & Co. and Sharp, Stewart & Co. go back to the thirties, when George Stephenson was yet alive and the railways of England, such as then existed, had never dreamed of building engines for themselves, but depended entirely on private makers. At present the firm of Neilson, Reid & Co. alone can turn out 400 engines per annum, and have actually built some 6,000 since the date of its foundation in 1837. These have been of all classes, from the smallest of narrow-gauge locomotives to the heaviest and most powerful of those employed in hauling express trains. Messrs. Sharp, Stewart & Co. have an equally fine record, and none of the best work in early railway practice was done with engines built by them. Messrs. Dubs & Co., although a younger house, have also turned out many locomotives of the very highest class.

AMERICANS AT WINDSOR.

Mr. and Mrs. Henry White Spend Week End with Royal Family—Gen. Miles Invited to Dine.

LONDON, Jan. 31.—Henry White, the United States Charge d'Affaires, and Mrs. White went to Windsor to-day to spend the week end with King Edward.

Lieut. Gen. Miles will go to Windsor to-morrow and will dine and sleep at the Castle by the King's special desire.

COLLISION OF WARSHIPS.

Fifteen British Sailors Believed to Have Been Drowned Off Corfu.

ISLAND OF CORFU, Jan. 31.—The British cruiser Pioneer ran into the torpedo-boat destroyer Orwell near the Channel of Corfu to-day, and fifteen persons are believed to have been drowned.

The Orwell was cut through at the conning tower during night naval operations, and her fore part sank in deep water, taking down fifteen men.

Only two bodies have been recovered. The after part of the Orwell has been towed here.

SERIOUS FLOODS IN SCOTLAND.

Melting Snows Cause Rivers to Overflow in Many Districts.

LONDON, Jan. 31.—The melting of the snow has caused extensive floods and serious damage in Scotland. The River Tay has overflowed in Perthshire, and many carcasses of deer, cattle, and sheep and quantities of household furniture are floating in the streets of Perth.

In Inverness the River Ness has overflowed and the railroad bridges have been damaged. The River Dee has flooded part of Balmoral and has elsewhere caused great destruction.

MRS. MAYBRICK FAILS AGAIN.

Home Secretary Refuses to Give Imprisoned American Woman Her Freedom.

LONDON, Jan. 31.—Both Ambassador Choate and Mrs. Florence Maybrick herself recently received further rebuffs in the attempts to gain the latter's freedom.

Home Secretary Akers-Douglas replied to the Embassy's representations and to the imprisoned woman's appeal that he saw no grounds for her release. The appeals were made especially in connection with the necessity for Mrs. Maybrick's presence in the United States to testify in the Virginia land suits in which she and her mother, Baroness de Roques, are interested.

The Baroness has exhausted all her means in her endeavors to gain her daughter's freedom, and is now almost penniless.

If the remission of sentence which is generally applied in the case of life sentences is granted in Mrs. Maybrick's case, she should be released in March.

Whether this will be done seems doubtful, notwithstanding the alleged existence of a letter from Lord Salisbury to the late Ambassador Bayard promising that the prisoner's sentence would be remitted.

EXPANSION IN BELGIUM

Annexation of Luxembourg is Discussed at Brussels.

Much Interest Centres in the Sale of the Chateau Chimay—Other Topics of the Capital.

Foreign Correspondence NEW YORK TIMES.

BRUSSELS, Jan. 21.—The severe illness of the Grand Duke of Luxembourg, following closely upon that of the hereditary Grand Duke, has made the Luxembourg question one of great present interest in official circles here. The perplexed problem of succession to the Grand Ducal throne may be opened at any moment, and its solution is naturally a matter of importance to Belgium.

A party is well known to exist in the Grand Duchy in favor of annexation to Belgium, and there are not a few statesmen in Belgium who are of the opinion that this would be the easiest way out of the difficulty. The Grand Duchy by becoming an integral portion of the Belgian kingdom would thus cease to be a danger to the peace of Europe. Strong affinities of race and language exist, moreover, between the people of Belgium and those of Luxembourg.

The forthcoming sale of the Chateau de Chimay, the famous historical seat of Prince Joseph de Chimay, to a wealthy foreigner now residing in Paris, and said to be an American, has naturally drawn attention to this ancestral home of the Caraman-Chimay family. The history of Chimay is intimately connected with some of the most important events in the annals of Europe during the last 500 years. It has been owned successively by the Ducs de Croy, the Ducs d'Arenberg, and the Princes de Chimay.

Members of these families who were closely allied to the reigning royal houses of Europe, and who have distinguished themselves as soldiers and diplomats in the service of the French Kings and Austrian Emperors, have left unique souvenirs at Chimay of their power and glory. The château was besieged on several occasions in the fourteenth and fifteenth centuries, and was captured in 1558 by Don Juan of Austria. It was besieged again in 1595 by the Maréchal de Bouillon, and in 1653 by Turenne. It contains, among other historical rooms, a theatre hall built by Mme. Tallien, wife of the "Conventional," who married the Prince de Caraman-Chimay as her second husband.

Among the distinguished guests who have been received at the château and whose names are inscribed on the famous "Golden Book" are Napoleon I., the Empress Josephine and Marie-Louise, Jérome and Louis Bonaparte, Pauline Borghese, the Czar Alexander I., Louis Philippe and Queen Marie-Amélie, King Victor Emmanuel II., Queen Victoria, and King Edward VII. as Prince of Wales.

The present owner of Chimay, Prince Joseph de Caraman-Chimay, was married in 1890 to Clara Ward. The Prince has, among other distinctions, that of being a Grandee of Spain of the First Class. His sisters are the Comtesse Greffulhe and Princess de Tinan.

M. Giron, with whom the Crown Princess of Saxony eloped, is well known in Brussels, where he had the reputation among those who knew him of being somewhat wild. It seems that at the early age of eighteen he had been the hero of a romance, the dénouement of which was an attempt to elope with the object of his affections, a young girl of the upper bourgeoisie here.

According to the official statement made by the German Minister to Belgium, Count Wallnitz, Giron was engaged by the Minister himself as tutor to the Prince of Saxony's children, Count Wallnitz is a brother of the master of ceremonies at the Saxon Court.

This fact brings back to mind an interesting episode. The German Minister to Belgium is a son-in-law of the Countess von Bülow, wife of the present Chancellor. Mme. von Bülow was first married to Count Doenhoff, Prussian Minister to Dresden, by whom she had two children, a daughter, the wife of the German Minister in Brussels, and a son, Count Siegfried Doenhoff. M. von Bülow was, about twenty-five years ago, Secretary of the Prussian Legation at Dresden, when he eloped with the wife of his Minister, Countess Doenhoff.

Such an adventure would forever have ended the diplomatic career of any one less favored by fortune than the present Chancellor, whose prospects were not in the least injured by his escapade. Countess Doenhoff obtained a divorce, and the Pope annulled the marriage. The eloping couple were then married. As for Count Doenhoff, he is still Minister at Dresden and, by a strange irony of fate, he sends his diplomatic reports to "His Excellency Count von Bülow!" It is certainly a coincidence that it should be the son-in-law of a woman who left Dresden in much the same manner as Princess Louise who sent Giron to the Saxon Court.

M. de Giers, Russian Minister to Belgium, gave a dinner party last Thursday in honor of Robert Mason Winthrop, Secretary of the United States Legation here. Among those present were Count de Smet de Naeyer, Minister of Finance, and Countess de Smet de Naeyer, Duke and Duchess de Caivello, Count van der Straeten-Ponthoz, Mr. and Mrs. L. Donny.

The preparations for the international exhibition to be held at Liege in 1905 are being actively pushed forward. The members of the Exhibition Executive Committee were received yesterday by King Leopold at the Brussels Palace. The general plans of the exhibition were laid before his Majesty and were approved by him. One of the features of the Liege World's Fair will be a section devoted to the evolution of municipal and public art in Belgium from the earliest times down to the present day.

Owing to the great strides made by the municipal art movement in Belgium of late years, this section promises to be one of unique interest. It augurs well for the success of the Liege exhibition that Prince Albert has accepted to be the effective Chairman of the Exhibition Committee of Organization.

The second Belgian international automobile show will be held here next month, and promises to be a great success. Belgium now holds the second rank in Europe as regards the manufacture of automobiles. The best French and Belgian firms will exhibit at the coming show. There are at present no less than 100 automobile manufacturing firms in Belgium, the total number of men employed being 10,000.

B. C. de W.

OIL TO PROPEL WARSHIPS.

Four Vessels of British Channel Squadron Start on an Experimental Cruise.

LONDON, Jan. 31.—Exceptional interest is attached to the departure of the Channel squadron from Portsmouth to-day on a prolonged cruise. For the first time British battleships have been fitted to consume oil as fuel. These experiments have so far been confined to small war vessels, but now both the Hannibal and Mars will use petroleum instead of coal, while the cruisers Duke of Edinburgh and Black Prince are similarly equipped. The oil is carried in tanks [illegible] in the double bottoms of the ships.

DOINGS OF SOCIETY IN FRANCE

General Miles and Staff Arrive in Paris—Notable Entertainments of American Minister to Turkey and Mrs. Leishman—Mrs. Houston's Brilliant "At Home."

Special Cable to THE NEW YORK TIMES.

PARIS, Jan. 31.—Lieut. Gen. Miles, and Col. Marion P. Maus have arrived at the Hotel Continental.

George W. T. Lord of New York, who died at his residence, Rue Boissière, and whose funeral was held on Thursday, is a brother of John Lord, who died at Cannes in December last. He was a member of the American Chamber of Commerce.

Lloyd C. Griscom, recently appointed as Minister to Japan, is stopping here on his way to America for a short holiday before taking up his new appointment.

Perhaps the United States Minister to Constantinople and Mrs. Leishman figure among the most notable entertainers of the Diplomatic Corps in Europe. Their memorable fêtes given at Hapsburg Castle, Switzerland, will ever remain in the minds of those who attended those brilliant soirées and receptions. While Mr. Leishman has returned to Constantinople with his son, Mrs. Leishman and her daughter remain for a few months at their pretty hotel in the Avenue Du Bois de Boulogne. That of Sunday was the last of the receptions Mrs. Leishman intends giving until the early Spring. On this occasion her toilette in cream lace over cream satin was relieved by a pastel blue velvet sash. Miss Leishman wore a rose crêpe de chine and mousseline toilette. The skirt, gathered in on either side of the hips, fell in voluminous and graceful folds, while the corsage was simply draped with pink mousseline de soie.

Baroness von Orendorf gave a dinner party to a few friends at the Hotel Ritz on Saturday evening last. Pink, the favorite color of the hostess, was carried out in the table decorations, which were roses, smilax, carnations, and dahlias. Pink was also employed in the dainty silk coverings over the numerous wax candles.

The Baroness von Orendorf wore a princess robe of rich black velvet. The corsage was finished off with a jabot of rose point lace. A large picture hat of black mousseline crowned with plumes completed the toilette.

Mrs. O. D. Barrett was in black peau de soie, trimmed in dull jet. Mrs. John Edwin Thomas wore a costume of cream and black chantilly. Miss Gladys Calla was in rose mousseline, with incrustations of cream guipure. Miss Philomena Joubert was in black cream mousseline.

Baroness von Orendorf is a daughter of Gen. Voohees of Washington. She married the Russian Ambassador to America, who died some two years ago, and the Baroness has been travelling most of the time since. She has recently come to Paris, and expects to make this city her home. She has taken an apartment on the Rue Hamelin and, with her niece, Miss Gladys Calla, will entertain extensively throughout the season.

The programme at Mrs. Houston's "At Home," in the Avenue Victor Hugo, was very interesting. For attractions she had Mlle. Vettura, a young Roumanian, who has carried off all the prizes at the Conservatoire in Paris, and who promises to be one of the future stars at the Comédie Française. She was particularly successful in poems by Beaudelaire. W. Clark, the American baritone, who is rapidly conquering the Parisian public, as he has that in the States, sang several selections.

Among the guests were Jean Lahore, the poet; Mme. Cassilis, Mr. and Mrs. Frank King Clark, M. Veyrin, Dr. Weiss, M. Nouffiard, and many others.

Mr. and Mrs. Ferdinand Blumenthal have left Paris for New York on a short visit. They expect to return by the end of March.

John E. McGowan, after a two months' stay at Nice, has just arrived at the Hotel de Londres, Rue de Castiglione. Mr. McGowan intends to spend one month in Paris and to return in April to the United States.

John Barrett, Commissioner General of the Louisiana Purchase Exposition for Asia and Australia, has arrived at the Hotel du Louve et de la Paix, Marseilles from Melbourne, en route for Paris.

Mrs. Ross Winans of Baltimore, who is now at the Hotel du Rhin, gave a ladies' luncheon on Friday, the guests at which were the Marquise de Fresnoy, Comtesse de Coetlogon, Mrs. Drake, Mrs. Parish, Mrs. Rockwell, and Mrs. Payson.

The Marquise de Wentworth resumed her reception days on Thursday, at her hotel in the Avenue des Champs Elysées.

The Duc and Duchesse de la Rochefoucauld left last week for their château in the south of France.

Mrs. Mitchell, mother of Duchesse de la Rochefoucauld is much improved in health, but will remain at the Palais D'Orsay some weeks longer.

SIR JOHN SPRIGG HISSED.

Premier of Cape Colony Publicly Insulted at Banquet to Mr. Chamberlain.

KIMBERLEY, Cape Colony, Jan. 31.—Since his arrival here with Colonial Secretary Chamberlain and Mrs. Chamberlain a series of demonstrations against Sir John Gordon Sprigg, the Premier of Cape Colony, have occurred.

He was publicly hissed on several occasions, and during Mr. Chamberlain's remarks on the situation in Cape Colony at the banquet given in his honor here yesterday evening cries were raised of "Away with Sprigg!" while the members of a deputation which waited on Mr. Chamberlain informed him in the Premier's presence that they had no faith in the Sprigg ministry, which "pampered the Afrikander Bund and was dependent on it for its existence."

Sir John heatedly characterised these remarks as a personal insult.

TO SELL THE HILL OF TARA.

One of Ireland's Most Historic Sites to Go Under the Hammer.

LONDON, Jan. 31.—The Hill of Tara, so rich in historic memories, will shortly be sold at auction in Dublin.

Until the sixth century Tara was the chief seat of the Irish Kings, and a pillar six feet high is still pointed out as the coronation stone. Then it also was a university, the Druids' headquarters, and the site of King Cormack's splendid Court.

The last important gathering on the Hill of Tara was in 1843, when a gigantic meeting was held there under the auspices of Daniel O'Connell, who urged the repeal of the union.

MAY BE WAR OVER ACRE.

Brazilian and Bolivian Troops Moving on Disputed Territory.

RIO JANEIRO, Jan. 31.—Gen. Itaperuna has left here for the Province of Matto Grosso, the scene of the Acre difficulty between Brazil and Bolivia. He is taking with him artillery, rapid-fire guns, and ammunition, and is accompanied by Gen. Caesar Sampaio. Gen. Sampaio will command the Brazilian division on the Matto Grosso-Bolivian frontier.

The Acre difficulty between Brazil and Bolivia has been reported to be growing acute, notwithstanding the statements from some quarters that an amicable understanding would be reached.

Dispatches received from La Paz, Bolivia, declare that two detachments of Bolivian troops have left the capital for Acre and that the Brazilians in Acre were besieged in the Porvenir and Costa Rica settlements.

SANTO DOMINGO YIELDS.

Agrees to Submit Claims of American Improvement Company to Arbitration.

SAN DOMINGO, Jan. 31.—United States Minister Powell and a representative of the Dominican Government to-day signed a protocol providing that the matter of the disputed claims of the San Domingo Improvement Company of New York be referred to international arbitration, and that the Dominican Government pay the improvement company the sum of $4,500,000 for all its rights and franchises. The proposition was recently presented to the Dominican Government by Mr. Powell, and accepted by it.

The arbitrators, of whome there are to be three, will meet in Washington. One arbitrator is to be selected by the Dominican Government from the Justices of the United States Supreme Court or the Judges of the Circuit Courts of the United States.

The claims of the San Domingo Improvement Company, which alleges that it was unjustly deprived of certain valuable franchises by the Dominican Government, have been in dispute for several years. The Government has strongly resisted any settlement of the case up to the present time.

STRENGTH OF FRENCH ARMY.

Socialist Deputies Repudiate the Charge That They Are Opposed to Its Increase.

PARIS, Jan. 31.—The discussion of the army budget in the Chamber of Deputies to-day brought out considerable general debate relative to the strength of the army and the necessity of maintaining it on a strong fighting basis. Gen. André, Minister of War; Col. Rousset, a Republican Liberal member of the Chamber, and other leaders of the military element, took an active part in defending the army from criticism.

M. Messimy (Radical Socialist) made a long speech on the heavy financial burden the maintenance of the army imposed upon the country, saying this limited industrial and agricultural progress and took the best years of the youth of France for military service. Col. Rousset pointed out the dangers of surrounding France and declared peace to be at the mercy of a single adverse incident. Amid the enthusiasm of the Chamber, he asserted that the part of wisdom for France was to prepare for all eventualities.

Gen. André devoted his attention to the desirability of keeping up the army on a peace footing, so that it would readily be transformable to a war footing.

M. Jaurès (Socialist) repudiated the statement that Socialists are opposed to the army. He said he considered the army to be one of the strongest arms of the republic, and that its first line and the reserves equaled in strength the Germany Army. He said it was necessary to maintain an effective peace footing corresponding to the needs of war.

Amid a patriotic demonstration the first chapter of the army budget was finally adopted.

FRENCH ARMY REFORM.

Concerning "Dismissed" Officers—Decrees on Salutes and Mess Tables.

Some interesting reforms are being meditated by Gen. André, the French Minister of War. The first is a bill which will make it possible for an officer dismissed from the army to re-enter it. The second consists of two decrees which concern military salutes and messes.

At present, when an officer is expelled from the army by a decree signed by the President of the Republic, he can under no circumstances re-enter it. Gen. André's bill, if passed, will alter this condition of things. It will give the Minister of War power to bring before the Cabinet Council at any time the names of officers who have been "mis-en-reforme," and in the event of the Ministers approving their colleagues' proposal, those officers will be restored to their old positions. The Nationalist journals will of course declare that this measure is destined to benefit certain officers whose names were removed from the army list during the Dreyfus agitation. But as the bill is of a general character, it may also be applied for the benefit of the two officers whose refusal to obey instructions in connection with the expulsion of the nuns in Brittany led to severe disciplinary measures being taken against them, and in connection with other cases, should they arise. M. Joseph Reinach, whose wish as an Officer of the Reserve was taken from him, may, with Lieut. Col. Picquart, benefit by the new law.

There has hitherto been no "mess" in the French Army. Officers usually arranged with some hotel or restaurant for a monthly "pension," the bachelors Continental feeding at one table, the unmarried Lieutenants at another, often in another house and so forth. Now the fact has come out that they may arrange as they please, together or separate, according to their respective tastes.

The other change has been brought about by the suppression of the movements of advancing and presenting arms. The orders "Portez armes!" and "Présentez armes!" are no longer heard. It is argued that these movements took long to learn and were of no particular service. No arms are no more to be presented to officers and to high functionaries who were entitled to the compliment. But of course this does not mean that all military salutes are to be abol

SAXON CROWN PRINCE MAY RENOUNCE SUCCESSION

Reported He Will Give Up His Rights to the Throne and Resign His Military Offices—Coolness of Dresden Population Toward the Prince.

Special Cable to THE NEW YORK TIMES.

BERLIN, Jan. 31.—There is a report current here that the Crown Prince of Saxony will resign his succession to the throne. The story is based on the statement made by an eminent legal authority that in view of the military positions which the Crown Prince holds he cannot do otherwise. Being an officer, his wife's affairs, according to army traditions, ought to go to a court of honor. Usually in such cases the court compels a duel. M. Giron is not, however, willing to fight.

It is considered peculiar in Dresden that for the German Emperor's birthday no representative of the Saxon Court came to Berlin, as had been the formality observed heretofore. The personal congratulation of the Saxon Minister of War was also omitted, and it was noticed that at the gala dinner of the Saxon Court Prince Johann George and not the Saxon Crown Prince responded to the toast to the Kaiser.

The population of Dresden is reported to be cool toward the Crown Prince. Some days ago as he was entering a store to make some purchases the people surrounding his carriage called to him that the Crown Princess should return.

"We want our Princess Louise again," they cried.

BERLIN, Jan. 31.—A curious story widely told in the provincial and Berlin papers this morning is that the Crown Prince of Saxony is determined to renounce his succession to the throne in favor of his son, George, who is ten years of age, for the reason that the military code of honor does not permit a husband wronged as he has been to remain in the service, and the Crown Prince, as Commander of the First Army Corps of Saxony and as the future Commander of the entire Saxon contingent, must pass upon the findings of military courts of honor, which, in circumstances similar to those of the Crown Prince, require a challenge or the laying aside of the uniform.

The Crown Prince, it is added, is scarcely expected to challenge Prof. Giron, the teacher of languages who eloped with the Crown Princess, but opinion in the army is so rigid on points of honor that the Crown Prince is regarded as ineligible for reviewing the decisions of courts of honor and protecting the honor of the uniform.

The Rheinische Courier of Wiesbaden says without reservation that the Crown Prince has renounced his right of succession to the throne and the Berlin Morgen Post's Dresden correspondent says he has already appealed to the Emperor to relieve him of all military positions.

CHILD LABOR IN GERMANY.

Bill Prohibiting Children Under Twelve Years in Factories Passes Second Reading.

BERLIN, Jan. 31.—The Reichstag to-day passed the second reading of the bill protecting child labor in factories and shops and prohibiting the employment of children under twelve years of age in some branches of industry and under thirteen in others.

The Socialists attempted to extend the prohibitions to agriculture and household work, but this was voted down. They also moved the raising of the age limit, but this also was rejected.

YANKEE MERCHANTS IN BERLIN.

Objects of American Chamber of Commerce Formed in German Capital.

BERLIN, Jan. 31.—The American Chamber of Commerce, formed here Thursday, has among its objects the establishment of Courts of Arbitration for adjusting disagreements between German and American firms, and the supplying to Boards of Trade and individuals in both countries of accurate information on business and tariff subjects.

It is intended to have the best relations with the German Chamber of Commerce and the Government. A number of German business and financial leaders will be invited to become honorary members of the American Chamber.

AMERICAN ARTIST PRAISED.

Berlin Critics Say Arthur Johnson of Cincinnati Has the Hand of a Great Painter.

BERLIN, Jan. 31.—Arthur Johnson of Cincinnati, the landscape painter, is making a special exhibit here. The art critics praise his work.

Paul Warncke, in the Kreuz Zeitung, says: "He shows in simple, clear strokes the greatest mastery of detail, and every stroke betrays the hand of a great artist."

H. N. Matsen, the sculptor, of Detroit, is sending a model of a statue of the late President McKinley for Philadelphia's international competition.

A number of German sculptors are also preparing to send models to Philadelphia.

Lecture on America Before a King.

Special Cable to THE NEW YORK TIMES.

BERLIN, Jan. 31.—Prof. Schaefer, the famous historian of Heidelberg, lectured before the German Naval Society at Stuttgart on the development of the United States as a world power. The King of Würtemburg and his Ministers were present and seemed much interested in the lecture.

BANDITS HOLD FULL SWAY.

The Caucasus Overrun and Terrorized by Lawless Bands.

ST. PETERSBURG, Jan. 31.—Brigands have been terrorizing the Caucasus recently, levying tribute on towns and holding up trains to an extent hitherto unknown. Even garrison towns have been frightened into paying regular tribute in return for which the bandits not only refrain from plundering but protect the towns from other marauders.

The attempts of the troops to cope with the situation have been generally foiled, owing to the complicity of the inhabitants, who are fearful of the brigands' vengeance and therefore warn and shelter the bandits. Stations and trains on the Vladi-Kavkaz Railroad have frequently been attacked.

DUTCH RAILWAY STRIKE ENDS.

Companies Agree to Demands of Employes Not to Carry Goods for Transportation Concerns.

AMSTERDAM, Jan. 31.—During a meeting of striking railroad men, held here this evening, a telegram was received from the Netherlands Railroad Company announcing that the company had agreed to the demands of its employes not to carry goods for the transportation companies in support of whose men the railroad men had gone out on strike.

The State Railroad, having agreed to act in accordance with the Netherlands Company, the strike is considered to be at an end and the early resumption of the railroad service is expected.

SANTO DOMINGO MUST SETTLE.

Refuses to Pay Clyde Line Claims and is Warned by American Minister.

SAN DOMINGO, Jan. 31.—The Dominican Government has informed United States Minister Powell that it cannot agree to his request, made in the name of the American Government, in the matter of the claims of the Clyde line of steamers, and that if this company feels aggrieved at the action of the Government it should seek redress before a tribunal of the Dominican Republic, and not appeal to the Government of the United States.

To this communication Mr. Powell made a strongly-worded reply, in which he informed the Dominican Government that the United States would insist upon redress for its citizens, and that the pending cases must be settled by the Government, and not through the courts.

Previous dispatches received from San Domingo say that Mr. Powell had demanded the withdrawal of the Dominican decree charging the port dues, and that if the Government failed to comply with his demand it should pay the Clyde Line the money due and recognize certain other rights claimed by the company.

On Jan. 28 Mr. Powell insisted upon a reply from the Dominican Government to his previous demand for the immediate payment of the $250,000 claimed to be due the Clyde Line.

SCHEME TO BOYCOTT POLISH MERCHANTS IN POSEN.

An extraordinary case of police interference with Poles is contained in a dispatch from Posen published in The Vorwärts, the Prussian Socialist organ. The Chief of Police in Posen recently wrote to the commander of the troops there that a certain Polish restaurant-keeper, named Robinski, during the Kaiser's recent visit, neither illuminated his house nor displayed any decorations. He closed his restaurant at 8 o'clock, and pulled down his shutters. The Chief of Police added that numerous officers of the garrison frequented Robinski's restaurant, and that it is his duty to acquaint the commandant of this fact.

The commandant replied that he wished to know whether any other establishments besides Robinski's had displayed a similar attitude; if so, he would take the necessary steps against all these establishments together. The Chief of Police mentioned eighteen other houses in Posen which showed a similar disloyal bearing. The commandant informed the police that they were to bring these facts to the knowledge of the military and sanitary officers, and of the higher civic officials, especially those whose duty it is to arrange for the supply of military canteens.

Spanish Strikers Loot Shops.

BARCELONA, Spain, Jan. 31.—The supply of provisions having failed at Reus, (near Tarragona,) where a general strike is in progress, the strikers have looted a number of shops, most of which are now closed. Many arrests have been made.

Steamship Cedric on Trial Trip.

BELFAST, Ireland, Jan. 31.—The White Star Line steamer Cedric, the largest merchant vessel in the world, left here this morning for Liverpool on her trial trip. Mr. Arnold-Forster, Parliamentary Secretary to the British Admiralty, will be among the passengers of the Cedric when she sails on her maiden voyage to New York Feb. 11.

Dangerous Rebellion in Canton.

CANTON, Jan. 31.—The Chinese authorities have captured arms, ammunition, and commissariat stores collected for the "Reformers." Foreign marines are patrolling the Shamien suburb of Canton, and gunboats are held in readiness at Hongkong to sail for this port if their services are required.

Again Things Look Bright in Fez.

TANGIER, Morocco, Jan. 31.—The information was received by courier from Fez this afternoon that the Pretender to the throne, Bu Hamara, had detreated a distance of eight miles to his former position. There has been no engagement between the imperial troops and the soldiers of the Pretender. Several villages in the Hiyiana region have been burned, and the inhabitants captured. The feeling at Fez is hopeful.

DRINK REFORM IN TURKEY.

How a Policeman Was Punished by Marshal Hassan Pasha.

Although, as is well known, Mohammedanism forbids the use of alcoholic liquor, according to advices from Constantinople the Turkish inhabitants there are not among the most temperate people in the world. Recent drinking in taverns at Para had seriously threatened the peace, followed, as it usually was, by stabbing affrays and downright murders. The Sultan has, therefore, issued a decree making all persons in the employment of the Government liable to six weeks' imprisonment if seen in taverns, and to dismissal from the service on a second violation of the ordinance.

It is related in a local paper that a policeman was caught in a tavern the other day, and taken to Marshal Hassan Pasha, commander of the Beshiktash police, who asked him why he was tipsy. The prisoner pleaded toothache, and said that he had taken alcohol in order to kill the pain. The Pasha called in a barber—barbers are generally supposed in Turkey to have some knowledge of dentistry—and ordered him to extract the tooth that was the cause of the mischief. The barber examined the policeman's mouth, and as the poor fellow's teeth were in a perfect state, could not discover any rotten tooth. The prisoner was thereupon compelled to point out one, and a moment later it was in the hands of the Pasha. "This is perfectly sound," said he. "Surely, this could not have caused you any pain." Then, turning to the barber, he said: "You must have taken the wrong tooth out; it must be the next one. Extract it at once." The poor policeman had to submit to the second operation, and out came another tooth, as sound as the first. Hassan Pasha then thought the chastisement sufficient, and dismissed the prisoner, after expressing the belief that his remaining teeth would not ache to the extent of making him forget the imperial prohibition regarding drink.

SERVANT PROBLEM A TOUGH ONE IN CUBA

Housekeepers Hire "Specialists" for Each Phase of Domestic Work.

Male Cooks Who Do the Marketing and Keep the Change—Lazy Maids, Laundresses, Porters, and Dishwashers.

Foreign Correspondence NEW YORK TIMES.

HAVANA, Jan. 23.—The servant question puzzles the feminine world all over the globe, from the household where the number of dependents is reckoned in two figures to that—not always in an extreme rural district—where the one maid sits at table with the family, helping herself complacently to the best of everything, retaining her seat while the daughter of the house replenishes the plate of hot bread from the kitchen, and perhaps not persuaded to be absent from the table when guests are expected.

In Cuba the question is quite as trying—to a foreigner. The native housekeeper does not encounter all of the difficulties, although she, too, has her share of them, the greatest of which is keeping peace among her dependents. The main reason that Americans have difficulties is that as a rule they do not keep the number of servants that the natives do. Families whose means are not particularly large keep several, while the wealthy keep a great number. As a consequence in the average Cuban household servants are in each other's way.

The cause of this large number is that each expects to do but one thing; the housemaid or houseman—in fair sized houses there are several of these—simply cares for certain rooms; his or her duties end there. There is a man who does the scrubbing of these. If there are children probably there is a nurse for each one. There is a gardener, a cook, a second cook, perhaps a third, a waiter, a laundress, a porter, and various others.

This is a very moderate estimate. A Cuban woman who spent several years in the States said that on her return she determined to conduct her household on American lines in regard to the servants; so instead of having a chambermaid for each room she had one for all the bedrooms; instead of one nurse for each of her children she had two nurses for the four. For a time she had considerable trouble, but finally the machinery became smooth in a measure. Now, instead of employing ten servants, as she did formerly, she has only five.

AMERICANS HAVE TROUBLE.

Americans are still having trouble on this score. They find it impossible to persuade some of them that it is possible to do "two works," as the expression goes. A maid-of-all-work, such as many American families of small size would like to have, is rarely found in this country of specialists. When one is seen she is remarked upon.

In despair of finding a maid who is willing to occupy a fair share of her time in work, many women have adopted the plan of employing immigrants just arrived from the old country, principally those from the Spanish Province of Galicia. For this purpose they go to the immigrant station on the hill overlooking Triscornia, and from the peasants congregated there—every Spanish ship brings over many of these—make a selection. These peasants from Galicia—Gallegas they are called—are hard workers, but for the most part very dull and stupid. It is not hard to account for this when we realize that for generations their people, both men and women, have been tillers of the soil, with none of the benefits of civilization. They themselves came here directly from the fields, the father's cottage having been mortgaged in many cases to raise the necessary money.

The poor creatures do not forget their obligations, and as soon as they make the money they send it back to pay off the indebtedness. Some of them know scarcely anything of the most common articles of the household. One would not press her clothes with an iron warm enough to smooth out the wrinkles because she was afraid that she would burn them, and would she scald her clothes with hot water, for the same reason. In spite of this stupidity, they make good servants; besides not being afraid of work, they are honest.

HIGH WAGES PAID.

The price offered seems princely to these peasants, who probably have not possessed in all their lives the sum offered for one month. But they are not here long, or perhaps only long enough to get broken in, before they learn that it is not customary for servants to do more than "one work," and they begin to object to doing more than others. The women are usually employed as nurses. The nurses carry babies in their arms more often than they roll them in carriages. Out of a dozen nurses the probability is that not one will be wheeling her charge. As a rule, Cuban babies are not large, so one is not such a burden as it might seem on the surface.

Some Jamaican negresses have found their way here, and are usually accounted very good; they come nearer to equaling the American maid-of-all-work than do any of the other servants. Nevertheless, a woman cook is a rarity. With many Cubans it is a matter of grave doubt whether a woman can prepare food acceptably; out of a hundred kitchens it is doubtful if more than one presided over by a woman could be found. There are probably not more than half a dozen transplanted American kitchens that have a woman at the head. There are many Chinese and French, but the majority are Cuban negroes. It will not do to investigate too closely their methods. The food is far more appetizing if there is ignorance of the manner in which it is prepared. Personally, these men are far from attractive, and in their untidiness they remind one of some negro cooks of our own Southern States, their slovenliness being no key to their ability to cook.

Cooks command the largest wages, and yet their duties are not arduous. They come at 10:30 or 11, just in time to get the noonday breakfast. A house servant or undercook prepares the early breakfast of coffee and milk; the chief cook rarely troubles himself with it. After he arrives he buries himself with the arrangements for the late breakfast, everything being brought to him by his understudy. Some cooks are such specialists that they will not cut the grape fruit nor prepare the salad dressing. Of course they do not wash dishes; that is left for the dish washer, who cleanses all the china and silver in cold water, and places it on a rack to dry. The dish rag is a mass of hemp, usually ravaled rope.

COOKS AS MARKETERS.

The cook usually does the marketing for the day before he comes in the morning, bringing the things with him in his basket. For this purpose he is allowed a certain amount of money each day, no change being expected. At night, when he goes home, he takes his basket with him, and in it everything that is left over. So should any one go to the cupboard for a bite to eat after his departure, that one would relive the experience of Old Mother Hubbard of nursery fame. The family is not treated to warmed-over dishes. The cook expects to support his family from his employer's table, and he does so in the majority of cases; it is one of the tacit understandings when he is engaged, unless it is stipulated otherwise.

Special feast days are hailed with delight by his family, for although their feast comes a day later than it should, according to the calendar, it is good when it arrives. The cook receives anywhere from $15 to $30 a month, $18 being considered very fair wages. His perquisites, such as the savings from each daily allowance of money, are considerable, often doubling or trebling this salary.

Cooks have no holidays. Women servants theoretically one day in every two weeks, having as soon as their duties are completed in the morning and returning in time for the next morning's work.

Unless a laundress, especially engaged as such, lives in the house, every bit of washing is sent out to a washerwoman, or to a laundry. There are no steam laundries. Clothes are badly treated, and chloride of lime is universally used to whiten them, and while the appearance is very good the clothes last only about half as long as they do when the substance is not used. Besides this, the Cuban sun fades colors so quickly that in a few washings a colored dress becomes white. Everything is starched so stiff that it almost stands alone.

CLOTHES RUINED IN THE WASH.

Your laundress, when she comes to arrange with you concerning your work, is arrayed in an immaculate wrapper of calico and lace, starched and fluted until it looks quite elaborate. When the clothes go to the wash they remain almost a week, and one is fortunate indeed if he gets them in five days. Down here we almost forget that there are places where there is a day generally observed as "washday." We never see the wash hung up in our back yard—if, indeed, we have back yards—and those of us that live in the city don't.

The porter sits on guard at the open doorway all day, and when night comes he puts his bed on the floor back of it, so that no one can come in without passing over him. He is not the neatly dressed or uniformed servant that one might expect to find at the door of an elegant house. Often he is old, too old to do manual labor, and takes this way of earning a living during his declining years. His clothing is of any kind, and more often than not it is shabby.

Cuban servants are lazy. They have little energy and move about as though there was nothing else whatever to do but the one thing at hand. The Spanish servants are energetic for the first few years on the island, then they, too, fall victims to the energy-stealing climate.

DOROTHY STANHOPE.

THE CAKE WALK IN VIENNA.

Its Figures and History Amusingly Described by the Paris Correspondent of Die Zeit.

If the prognostication of the Paris correspondent of Die Zeit of Vienna comes true, the emphatic steps and nimble strutting of the "cake walk" will soon absorb the attention of the Austrian capital. According to Die Zeit's correspondent, it is to M. Houdique of Paris that the honor is due of introducing "the great American dance" to Europeans. M. Houdique has forced the "cake walk" within the limitations of a regular dance, which may be taught by figures. Its history and description imparted by the French dancing master to the representative of Die Zeit are as follows:

"The 'cake walk' was invented by the negroes, and was originally a walk. For many years a planter gave a feast, to which he invited a wealthy negro and his wife, who lived in New York. This couple were so overdressed and so conceited and insolent that they were met everywhere with derision. They furthermore caused attention on account of their ridiculous walk.

"When the pair left the plantation, the host told his slaves that the next week he would give another party, and would present a cake to the couple who copied best the walk and grotesque bearing of his guests. After this, at every gathering, the 'cake walk' was danced, and the white people began to learn it. Elk's (a Paris dancer) father was a whisky manufacturer who kept hundreds of negroes. The boy, after learning the dance thoroughly, came to the idea to regulate the dance to figures, to obtain music for it, and to become a professional 'cake walker.' The dance is always performed in pairs, and the couple who introduces the most fanciful figures receive the prize, which is always a cake. The principal rules are: 1, a pronounced bending back of the trunk; 2, to keep both arms outstretched horizontally; 3, to lift the legs very high at each step.

FIGURE I.

"The gentleman and lady, standing side by side, the body bent back, the arms stretched out, dance, while they lift their knees as high as possible. This is the rule to be followed in every figure.

FIGURE II.

"The gentleman stands before the lady and searches for a glance from her eye, while at every step he changes from right to left and vice versa.

FIGURE III.

"The lady stands before the gentleman; she looks at him over her left shoulder.

FIGURE IV.

"The lady and gentleman, with their bodies held as in Figure I., dance side by side, but the gentleman backward, the lady forward; that is, the one facing the other.

FIGURE V.

"The lady and gentleman, with arms stretched forward, dance side by side, but in such a way that at one step they face each other and at the next they are back to back.

FIGURE VI.

"The gentleman encircles the lady with his left arm and the couple dance forward.

"After each couple have passed through these figures, they form a line, and in the position described in Figure I., dance very animatedly. The pair who dance with the most grace and fantasia receive the prize."

ITALIAN TOPICS.

Concerning Signor Prinetti's Illness—Retirement of Abbe Romolo—Nurri from the Christian Democratic Movement.

The importance of Signor Prinetti's illness at this time is not exaggerated in the Times special published yesterday morning. From a position of practical distrust when he entered the Zanardelli Cabinet two years ago, he has grown to be the strongest man in the Ministry, and his rearranging of the commercial treaties, especially that with Austria-Hungary, was looked forward to by intelligent Italians with considerable faith in Italy's ultimate advantage.

"Portfolios make strange colleagues," was Baron Sonnino's comment in February, 1901, when he heard that Prinetti had accepted the Foreign Ministryship. For several years previous Prinetti had been a most determined opponent of Signor Giolitti, the new Minister of the Interior, whose faults he had pitilessly exposed in the name of political morality. But in the Autumn of 1900 he had not hesitated to emulate his old enemy by introducing various measures of popular finance, including a reform of the income tax. Still, he was unwilling to put his theories to the proof at the Treasury, and took the Portfolio of Foreign Affairs, for which he had never displayed any special aptitude.

Nnevertheless, his rare adaptability enabled him to do conspicuous work as Foreign Minister, just as he did when he dropped his politico-financial theories and entered one of the Rudini Cabinets as Minister of Public Works, for which subject he also had no special training. He has been described as "a bad candidate for a portfolio, but an excellent Minister," and his management of foreign affairs has certainly been such as to obliterate the memory of his having forsaken the extreme Right to join a Ministry of the Left, where he has worked side by side with Giolitti, a man whose return to power he had always professed to consider the apotheosis of political immorality.

***

Greatly encouraged by the particular distinction made between Social and Christian Democracy in the Pope's last reply to the address of loyalty by Cardinal Oreglia di Santo Stephano, Abbé Romolo-Nurri, leader of the Christian Democrats in Italy, delivered an address in Rome the other evening which closed with the surprising announcement that he intended to withdraw from the movement. He traced the history of the formation of that party, which came into existence after the repression of recent disorders, which proved the unspeakable firmness of present institutions in Italy and the futility of any attempt to overthrow them, and added that the new party, "freed though it was from all entanglements with the past, had encountered the active hostility of the Clerical Party." He withdrew from the movement, but he hoped that one day "the Government of the Church at large" would return to his views.

ROUND ABOUT EUROPE.

PRESIDENT LOUBET will visit Algeria in the middle of April, leaving Paris on Easter Eve. He will spend two days at Marseilles to witness some gymnastic fêtes. The French President will not confine his stay to Algiers, but will make a tour inland, visiting Oran and Constantine, and he may even proceed along the coast as far as Tunis and Biserta.

***

Paris municipal returns for the week ended Jan. 22 show that the number of deaths registered was 930, as compared with the average of 1,056. The number of marriages celebrated in Paris was 478; 1,123 children were born, of which 549 were boys and 570 girls.

***

The Nord Railway Company of France is at present experimenting with a new platform luggage truck. Instead of being pushed by hand, the new truck is propelled by an electric motor, and the porter, instead of pushing behind, walks in front and guides the vehicle. The new truck is said to be somewhat higher and larger than the usual luggage truck, and can carry a ton of baggage with ease. It is mounted on four wheels, and, when set in motion by pressing a handle, travels along the platform at a fair pace.

***

The municipality of Rheims, France, has granted the use of a site upon which to hold an industrial exhibition. The works are being actively proceeded with, and the opening of the exhibition has been fixed for May 15.

***

The adventures of the French convict, Alphonse Stephen, who was recently arrested in the Rue de Richelieu, Paris, are said to be similar to many found in works of fiction. He was the chief of a gang known as "Les Secrisains," and was sent to Cayenne in 1896 for ten years' penal servitude. In April, 1900, he escaped with four other convicts. The fugitives obtained a canoe, and for twenty-two days were on the sea. Two of the party died; the others were picked up by the Captain of an English bark and taken to Demerara, whence Stephen escaped. After working in various countries he returned to Paris, and found that his wife had married. He threatened her, and she informed the police. Stephen will shortly be sent back to Cayenne.

***

Consternation is reigning in a little place in the Department of Seine-et-Oise, France, owing to the decree of M. le Maire, forbidding the circulation of cats for six weeks. The reason for this announcement is that a cat had gone mad the other day and had bitten two people before the inhabitants put an end to her. The Mayor of the parish only a few days before the issue of this decree had similarly dealt with the dogs in the community.

***

The death in Vienna the other day of Frau Aniela Rensinska at the age of ninety-one years recalls Napoleon's famous flight from Moscow. Her father was the head porter of the English hotel in Warsaw, at which Bonaparte stayed. At that time Frau Rensinska was born, and her father asked the Emperor to be godfather, to which Bonaparte consented, sending one of his aides de camp to represent him at the ceremony. From 1854 and until the fall of Napoleon III. the woman received a pension yearly of 400f.

***

Gen. Saussier, ex-Military Governor of Paris, has resigned his position as a member of the Higher Council of War on account of ill-health. The General is in his seventy-fifth year. He took part in twenty-four campaigns, having fought in the Crimean war and taken part in the Italian, Mexican, and African campaigns. He has the Grand Cross of the Legion of Honor. His successor at the Council of War will be Gen. Hagron, the commander of the Sixth Army Corps.

***

The Governor of the Italian colony of Erytrea in East Africa has conceded to a syndicate three portions of land of ten hectacres each, in the region of Hamasen, for mineral mining. The concession has a duration of thirty years, but should the company desire to give up the work it may do so at the end of four years, dating from July 8, 1900. According to the latest report of the company there had been found in eighteen months 4,500 tons of quartz, 3,479 tons of which were subjected to analysis, which resulted in a product of 65 kilogrammes, 248 grammes of gold, or 18.755 grammes for each ton of material.

***

The Official Gazette of Lisbon has just published an account of the Portuguese floating debt at the end of each month, from December, 1901, to June, 1902. The total of the floating debt on Dec. 31, 1901, was 58,381 contos of reis, and on June 30, 1902, 58,084½ contos of reis, or an increase of 308½ contos in six months. In the same period the interior debt increased from 50,245½ contos, to 51,336½ contos, and the exterior debt decreased from 8,136½ contos to 2,729 contos of reis.

***

The British Foreign Office, it is reported, is negotiating with the Persian Government for an extension of the road from the gulf to Teheran, the concessions of which will expire next July. The completion of this road is said to be of great importance to British interests. It will become of more importance to manufacturers in England and the United States in view of motor car developments and the interest which the Shah has recently conceived for motor transport. Upon the completion of the road heavy goods, it is thought, could be taken through the country nearly as cheaply on motor wagons as by rail, and fast passenger cars could reach Teheran from the Persian Gulf in one day.

***

A Swedish company has purchased the Rjukan Falls at Telemarken, in Norway, in order to apply its power to industrial purposes. This is one of the largest waterfalls in the world, and plans are being drawn up for making use of it. This company tried to obtain some of the falls in Sweden, but that Government retained them for public objects.

***

The story going the rounds of the Paris press, that Mme. Caroline Duran, the wife of the well-known painter, has just come into a fortune of $10,000,000, is denied by M. Duran. When M. Stern's death, which occurred while he was riding in a race at Elbeuf, was followed by the death of his father, Baron Stern, and the latter's wife, it was thought that the Baron's property would go to his sister-in-law, Mme. Duran. But the fortune must be shared by the Baron's heirs, and, consequently, will be divided among the Baron's sister, the sons of his brother, and other relatives.

***

The plan of M. Alexandre Bérard, the French Director of Posts and Telegraphs, to lay two cables, one from Brest to Dakar, the other connecting Madagascar with La Réunion and the Mauritius Islands, will greatly modify the telegraphic position of France. Heretofore communications between Paris and the French possessions in Western Africa or the Indian Ocean have been made exclusively through British and Spanish cables. Madagascar is served by a single cable from Majunga to the Portuguese possession of Mozambique, where it joints the British network. Thus Senegal and La Réunion are severed from the mother country, and the plan, when sanctioned by Parliament, will have valuable results.

IN FOREIGN LANDS.

Russia Reconstructing Her Near Eastern Policy—Progress of the French Ministry—Yves Guyot May Have a Portfolio—Leroy-Beaulieu on the Moorish Problem.

In the Chancelleries.

There is much searching of hearts among European diplomats in a vain attempt to arrange recent events in the Near East into some sort of coherent Russian policy. The man who will be able to force a certain logical sequence between the passage of the Dardanelles by Russian torpedo-boat destroyers, the appointment of Fuad Pasha as Grand Vizier to the Sultan, the Russo-Austrian scheme of reform in Macedonia, and the campaign just inaugurated by the Russian Orthodox Church in Constantinople, will deserve well of his fellows in the Continental diplomatic college for his extraordinary perceptive ability.

Two curious things have succeeded the revival of the Dardanelles affair. One is that while the diplomatic press of the Continent has been teeming with articles regarding the probable outcome of England's protest, these papers of Paris, which are known to reflect the opinion of the French Government, have remained practically silent. The other is that about a fortnight ago, according to trustworthy advices, two additional Russian destroyers entered the Dardanelles and passed up the Bosphorus. This fact was communicated to Signor Santini of the Italian Chamber of Deputies, who at once announced his intention to interpellate his Government on the subject.

In Vienna, England's protest is now regarded simply as a warning to the Porte against a too liberal interpretation of the right given to the Sultan to issue firmans for passage through the straits. This opinion finds its inspiration in the news that the British Embassy in Constantinople has just secured permission for the Khedival Company's steamers to pass through the Dardanelles without the formerly required firmans.

The most recent view expressed in Berlin is that Downing Street only protested after it had become aware that Russia had in contemplation a complete readjustment of her near-Eastern policy, in which the passage of the Dardanelles was the entering wedge. It is surmised that Downing Street is now in complete possession of the circumstances attending Count Lamsdorff's mission to Vienna, Sofia, and Belgrade. In which case, it is said, the concession to the Khedival line is only the beginning of a series of demands on Turkey by England in order to discover at what point Russia will tell the Porte to draw the line.

***

The Russo-Austrian Entente.

The generalizations indulged in by the St. Petersburg press in regard to Count Lamsdorff's tour have now subsided. It is authoritatively stated (and here "authoritatively" means that the utterance is simply inspired by the Government) in the Novoe Vremya that the sole purpose of the Russian Minister's mission was simply to bring about an agreement between Russia and Austria as to desired reforms in Macedonia, and to inform the Governments of Bulgaria and Servia that on no account would Russia permit the status quo of the Balkans to be disturbed. As a guarantee of this sole and undivided object of Count Lamsdorff's mission the Vremya republishes the text of the reform articles practically as they appeared in these columns Jan. 18, and adds in a becomingly spacious manner:

"The reforms will, it is true, deeply touch Turkish pride, but Turkey herself will derive great advantage from them. She requires the performance of a small operation in the European provinces. Every operation is painful, and is naturally resented by the diseased organism; but this resistance must be overcome by bringing certain influences to bear. It is to be hoped that Turkey will show that she is capable of listening to the voice of reason and that she will of her own accord accept the proffered assistance."

Apparently, the Svet, of St. Petersburg, organ of the Pan-Slavonic Party, accepts without question the foregoing official explanation. At the same time, it makes a mild attempt to convince public opinion of the impossibility of settling the Macedonian question by means of the proposed reforms, and concludes that a general insurrection of the Christian population in that country will inevitably take place next Spring, and will certainly be energetically supported by the Bulgarians and Servians in spite of the attempts of Russia and Austria-Hungary to restrain them by exercising pressure on the Governments at Sofia and Belgrade. It ends with expressing the commendable hope that when the inevitable happens, Russia may find herself impelled by the course of events to support the Macedonian movement.

The very diplomats who assert that the Sultan is completely in the power of Russia, do not hesitate to declare that the Porte will never institute the suggested reforms. They say that these reforms had their inception in the desire of Russia to divert the attention of Austria-Hungary from some supreme object, and if possible, to tranquillize, for the time, the Macedonian Revolutionary Committee. What that object is will probably not be revealed during the lifetime of Abdul Hamid. Nevertheless, it may be taken as significant that the army corps in the Southern Governments of European Russia is being reorganized and rearmed, and that the passage of the Dardanelles serves as a precedent by which Russia is able to re-enforce her Black Sea fleet by vessels, which, leaving the North Sea with orders to proceed to the Far Eastern station, are diverted before they reach the Suez Canal.

***

Political Outlook in France.

While the French Chambers are busying themselves with a discussion of the budget, Dr. Combes and his colleagues in the Ministry are preparing to add the finishing touches to the "chef d'œuvre" of the Waldeck-Rousseau Ministry, the Associations Law. Some 2,700 Congregational schools have been closed, and about 70 applications for authorization have been received by the Senate and the Chamber. Last year Dr. Combes and his colleagues were most modest in their declarations to the Chambers. Now they probably believe themselves to be in a position to insist that applications for authorization shall be rejected by Parliament. A sign of this policy is to be found in the rejection of applications made by associations controlled from abroad, which, according to the law, had to be submitted to the Council of State. It will consequently be seen that the Combes Cabinet has still a great deal to do before it has instituted the chief item in its programme.

But whither will that item lead? This question is being asked by Parisians as they note the increased Government majorities in both Chambers, and the fact that Dr. Combes has recently had several interviews with MM. Beurson and Dubief, delegates of the Radical Socialist groups, who represent men who believe in entire separation of Church and State.

The Government is practically helpless to respond to the calls which are being addressed to it from all over the country for a reorganization of the elementary and secondary schools made necessary by the expulsion of the religious orders. This can only be brought about so as to serve the public good by trebling the number of schools and by raising the salaries of State teachers so as to attract men and women of refinement and culture. The abrogation of the Falloux law would give the Government the necessary authority in the matter, while Republicans of all shades and their concomitant Opportunist Parliamentary Socialists, could hardly be scandalized by the introduction of M. Rouvier's budget for achieving this object.

As far as the "Cabinet of Country Doctors" has gone, it has destroyed without rebuilding and has deprived the public of certain necessities without offering anything in return. Both the Government and its legislative majority have gone too far to retreat at this late hour, and doubtless the former will be allowed to proceed with its programme. It would be premature, perhaps, to declare that the present Government actually contemplates a separation of Church and State, and yet when it comes to paying the cost of reorganizing the school system, where is the money to come from? The Parliamentary Socialists declare as one man that the millions now yearly paid by the State to the secular clergy should be given to State schools instead. What reply will the Government make?

***

The Case of Yves Guyot.

The announcement that M. Yves Guyot would cease to devote the fortunes of Le Siècle and devote himself entirely to political economy, did not not without interest. Although he was once Minister of Public Works, he had already written several pamphlets on economical subjects, but not until he became identified with the Dreyfus case that he obtained notoriety outside of France. Both he and his associate on the paper, M. Joseph Reinach, were tireless in their efforts to bring about a revision by publishing many important documents in Le Siècle and by using the pens in a manner which brought down upon them the wrath of the French General Staff. But it was an unpopular cause which they conducted and, before the time had time to recover from the effects of the second verdict at Rennes, M. Yves Guyot entered upon another campaign equally unpopular in France. The exposure of British cupidity in South Africa cannot lose much with his able lieutenant, M. Reinach, who was a pronounced Boer phobe, although still an ardent Dreyfusard. M. Reinach left the paper.

With the exception of the Siècle, Le Siècle was the only publication in France which attempted to give trustworthy reports of the Boer war. Confronted with distinct pro-British proclivities, M. Guyot based his argument on the ground that the Boers interfered with the progress of civilization, and he took up France to task for its short-sightedness. "I have noticed," he wrote on one occasion, "that whenever a syndicate of the Boers, who has charge of the mines has received news of the success he has sold, and whenever I have heard of an English victory he has bought." Such sentiments soon attracted the attention of the Englishmen, who soon began to find many realized prophecies in M. Guyot's economic works. His address on "Bounties and Free Trade" before the National Liberal Club in London, early in a year ago, and his subsequent agreement with the Cobden Club aroused considerable appreciative comment. On Oct. 22, 1902, he addressed a communication to President Roosevelt, suggesting an equitable way out of the commercial, industrial and social difficulties produced by the strike of the coal miners.

For some time it has been an open secret in official circles in Paris that his presence in the councils at the Elysée was greatly desired by both Dr. Combes and President Loubet. It is not unlikely, therefore, that his withdrawal as directing editor of Le Siècle may precede his acceptance of a portfolio at the hands of the Premier.

***

France, Spain, and Morocco.

It is apparent that the French journals are attempting to force confirmation or denial of the supposed Franco-Spanish alliance. The Matin of Paris recently published statements said to have been authorized by Señor Silvela, the Spanish Premier, and Señor Abarzuza, formerly Spanish Ambassador to Paris. The former is alleged to have stated: "As the present time, so far as it is possible to foresee in international politics, the Franco-Spanish alliance can only be a generous dream which would inflame the people, but which no statesman would dare to mark with the seal of reality." Señor Abarzuza, according to the Matin, said: "The project of an alliance between France and Spain is a delusion. The only situation possible on our side is that of dependence with a free hand. The entente exists, but for years to come I cannot forget that a nation which is only convalescent has neither the liberty of movement nor the strength necessary to bear the weight of an alliance, which, so far as Spain is concerned, would be a dupe's bargain."

Both these statements have been formally denied by the chief organ of the Conservative Government in Madrid. La Epoca, but nothing further is offered. At the same time, that distinguished political economist, M. Paul Leroy-Beaulieu, takes it for granted that France and Spain have reached an agreement by which Spain is to have a free hand over the entirety of Morocco, with the exception of a rectification of the Algerian frontier, which he delimits as follows:

"The Algerian frontier must be extended to the Atlas. The valley of the Muluya and its tributaries to the line of partition between the Mediterranean and the Atlantic should become French possessions. In other words, this will be the natural mountainous border separating the Morocco of the future, or Atlantic Morocco, from that part of the present empire which ought in equity to belong to France. In the South, where there are scarcely any mountains, the limit could be the course of the Wady Draa, and a straight line from El Hamid to the bend of the same river as far as the Spanish coast colony of Rio d'Oro. This would form an acquisition of from forty to fifty square miles in the Tele region, with the Tafilet and several oases."

M. Leroy-Beaulieu thinks that the downfall of the Sultan is inevitable, and that the Pretender on his succession will be unable to maintain the integrity of the Moorish Empire. When that time arrives the Franco-Spanish agreement will be made known. He anticipates no interference from England, who will receive formal guarantee for her commerce; nor from Italy, who will be allowed a free hand in Tripoli; nor from Germany, who has no interest in absorbing Mediterranean territory.

NO ENTANGLING ALLIANCES.

On no account will the United States join France, Spain, Sweden and Norway, Denmark, Belgium, and Holland in a counter-demonstration against the allies who are now at war with Venezuela. These European countries, like ourselves, are creditors of Venezuela. France is really in the position of a judgment creditor, her claims having been allowed and in part paid. They naturally regard with disfavor the position taken by Great Britain, Germany, and Italy that Venezuela must settle with them first, leaving other creditor nations who have not resorted to armed force to take their chances of getting paid out of what remains. We might of our own motion and alone, in our own way, take that position ourselves—never as a party to a joint demonstration, involving alliance or association with European Powers.

We have many times made it plain to the world that in dealing with American questions we neither invite nor permit the joint action of any European Power or Powers. Our position ought to be well understood, but it appears that it is not understood. The suggestion that we unite with France and the minor European Powers in pressing our money claim against Venezuela, to prevent the allies from constituting themselves preferred creditors, offers a fresh occasion for affirming our century-old policy of "No entangling alliances."

All the same, the attitude which Great Britain, Germany, and Italy have seen fit to take is unreasonable. France and the other Powers that have not gone to war with Venezuela are well within their rights in protesting against it. We have just cause of protest, but we do not seine the present occasion for raising money issues with Venezuela or with her other creditors. Our policy and our attitude toward the Venezuelan affair rest upon different grounds. We want the blockade raised, the fleets withdrawn, the wretched war ended, and to that end we have directed our efforts to secure an arbitration of the matters in dispute. We do not propose to have our attitude, the pretensions of the allies to be treated, or rather to treat themselves, as preferred creditors. But it is impossible not to view the claim they have set up as an obstruction to the progress of peace negotiations. As a doctrine of law, the assertion that the Power which is prompt-est in presenting with cannon its claim against a debtor nation thereby becomes a preferred creditor, entitled to immediate payment in full, can hardly be sustained, or if sustained, would lead to an unpleasant number of little wars. That such a preposterous attitude has been taken by the allies is a discouraging indication of their present temper. The representatives of these three Powers in Washington had apparently accepted the terms made by Mr. Bowen on behalf of Venezuela. The definite rejection of these terms at London, Berlin, and Rome would open up possibilities of European wrangling which would postpone the raising of the blockade. We are growing more impatient at the continuance of the blockade. We are weary, and something more than weary, with German explanations and protestations and with British apologies for the German alliance, coupled with ministerial assurances of undying friendship for ourselves. We leave Italy out of the account, but if Germany and Great Britain sincerely desire the good opinion of the American people they will let no minor and negligible considerations of advantage in the Venezuelan haggling postpone the ending of their blockade.

CAPT. LANTRY'S OBJECT LESSON.

The Police Commissioner does not approve of Capt. LANTRY's mode of teaching the house occupants of his precinct how very careless they are in keeping proper guard of their houses, and how easy it would be for sneak thieves to rob them.

There is no doubt that the lesson was extremely impressive. We venture to say that there were many thousand doors strictly locked yesterday after reading of the adventures of the Captain's detectives, which had not been secured the day before. The criticism of Commissioner GREENE relates especially to the fact that the Captain exceeded his authority in sending his plain-clothes men into private houses. If that were a proper thing to do at all, it should have been done with the approval in advance of the head of the Detective Bureau or the Chief Inspector of Police. Unquestionably this is sound reasoning, and it is in the direct line of the policy the Commissioner has pursued from the first—the policy of holding the force strictly to responsibility in the order of their rank and power. It is clear that no officer can be held to a definite and practical accountability if his immediate subordinate is to be allowed to act on his own discretion in matters which it is the duty of the superior to decide.

It may be added, moreover, that it is not exactly the business of a police Captain to prove to the community that petty crimes are easy. Even if the householders are careless, it is part of the duty of the police to keep the criminal class away from the city, and that can be done with proper energy and skill. Capt. LANTRY's action was taken by some—uncharitably and possibly unjustly—as an effort to prove that the police are not so much to blame for the prevalence of petty crime as they appear to be. The impression was natural enough, considering the general record of the police in the last few years.

DEMOCRATIC EVOLUTION.

It is a little surprising and very pleasant to find the Democrats of the Banking and Currency Committee of the House criticising the majority because it does not go far enough in the direction of a sound and safe and truly elastic bank currency. Not long ago all that the average Democrat cared to do about any legislation for improving the bank system was to kill it if possible on the general ground that banks were the tools of the money power and the natural foes of the common people. Especially was it the feeling of many Southern Democrats that all currency should be issued directly by the Government and that the right to issue currency was in the hands of the banks solely a means of oppression.

That these views are undergoing a decided change is plain from a report of the minority of the Banking and Currency Committee on the currency bill known as the "Fowler bill." The report is made by Mr. W. J. TALBERT, (S. C.) and is signed by him and by four other Democratic members of the committee, Messrs. THATER, (Mass.) LEWIS, (Ga.) FOCHERT, (N. Y.) and PADGETT, (Tenn.) while Mr. BARTLETT (Ga.) concurs in the main. The report begins with a very practical and searching criticism of our present National bank currency as defective and inelastic, predicated upon an inadequate banking principle, and declares that the bank currency system of the country should not rest solely upon a Government debt represented by bonds. Such an arrangement is condemned as mischievous in two directions; the tendency is to contract the currency when bonds are high and currency is most needed and to inflate it when bonds are low and the legitimate business of the country does not demand an increase. The report continues with the following forcible and reasonable statement:

> These we consider improper banking conditions, and the currency of the country should not be predicated solely upon such conditions. We believe that the banks of the country, under proper and wise legislation, safeguarded so as to secure a sound and solvent currency, are the agents and instrumentalities to issue the currency of the country, and we further believe that the legislation should be so framed as to permit the issuance of an amount of currency at all times adequate and sufficient for the business needs of the country, and which would be retired when not needed for the transaction of legitimate business.

This frank avowal of the opinion that the banks under proper conditions "are the agents and instrumentalities to issue the currency of the country," is creditable to the intelligence and candor of the gentlemen who make it. Equally noteworthy is the statement that the conditions of issue for bank currency should be such that the currency "would be retired when not needed for the transaction of legitimate business." Undoubtedly there have always been in the Democratic Party, and in the South, men who have seen these truths clearly, but they have either not been among the leaders, or their views have been subordinated to the sentiment of the party. It is an excellent sign when the entire Democratic minority on so important a committee as that of Banking and Currency can make a report such as we have here noted.

"COURT POLITICS."

The discussion in England of the constitutional question raised by the action of the Ministry in making what Lord CRANBORNE calls a "co-operation" with Germany is becoming warmer and warmer. It is not at all cooled by the consideration that nothing can be done about it officially. It is very certain that no responsible Minister is going to plead to Parliament the "commands" or even the wishes of an irresponsible monarch. The point of inquiry for Parliament will be how the Ministry came to make war, as Mr. BALFOUR has publicly admitted that it did, without consulting Parliament. That threatens to give the Ministry sufficient trouble.

Meanwhile, some of the denouncers of "Court influence" have gone to quite unwarranted lengths. Mr. SIDNEY LEE, for example, has set forth that the sovereign is "debarred from offering formal advice" to the Ministry, and The London Spectator appears to agree with him. The veteran publicist Mr. FREDERICK GREENWOOD forcibly takes issue with this view, and points out that, if it were adopted, the King of England would be denied political rights that belong to every one of his subjects.

The best statement of the case as to what really are the political powers of a British monarch is that which was made a generation ago by WALTER BAGEHOT. The chief rights of the sovereign, according to him, are "the right to be consulted, the right to encourage, and the right to warn." He adds that "a King of great sense and sagacity would want no others." As a matter of fact, Queen VICTORIA exercised these rights with effect, and sometimes to the great benefit of the nation. There is little doubt that the softening of the British demeanor in the Trent affair, which was due to her, or possibly to the Prince Consort, made the peaceful progress of the negotiations much more easily feasible than it would otherwise have been. Surely the King has a right to his political opinions. He has a right to bring them, "formally" or otherwise, to the notice of his Ministers. But always it is the Ministry and not the King that is ultimately responsible, and the power of decision must go with the responsibility. If King EDWARD has advised his Ministers to enter into a "co-operation" with Germany to bully Venezuela he has done nothing unconstitutional. It is the Ministers who have done something at once unconstitutional, weak, and fatuous, in yielding to his advice and acting upon it against their own judgments.

STEEL WAGON WAYS.

The article by Gen. ROY STONE on steel wagon ways, which appears on another page of this issue, is an interesting and valuable contribution to the literature of good roads. Lest it should be assumed that the author of the paper referred to, being the inventor and patentee of the system he advocates, is actuated therein by considerations of personal advantage, we are authorised to say that his interest in such patent or patents is dedicated to the public, and that he expects no further advantage from the use of the system than will come to him as a citizen and perhaps the user of wheeled vehicles.

The building of roads suited to the increasing requirements of the automobile gives the subject especial interest in connection with the agitation for good roads which the owners and friends of this class of vehicles have started and are maintaining with zeal and intelligence. Fortunately, what is a good road for the motor vehicle and the bicycle is also a good road for the road wagon, the heavy truck, and the farmer's wain, and the good roads argument is too well known and too unanswerable from the point of view of the public interest to need repetition here. The experimental section of steel wheelway laid on Murray Street has greatly facilitated the hauling of heavy truckloads from the river to the comparatively level streets running north and south along the backbone of Manhattan, and in a wider street its value would be proportionately greater.

TENEMENT REFORM THREATENED.

Most people have assumed that the tenement house reform was now quite secure from attack, since Commissioner DE FOREST consented, for the sake of conciliating opposition, to the amendments added to the law last year. He went, as he made clear at the time, to the utmost limit of the concessions that could be made without destroying the value of the reform. The immense improvements that have already been made in the building of the tenement districts of Manhattan are plain to whoever will take the trouble to look into the matter. They are plainest of all to the dwellers in those districts, who are voiceless, except through their votes. These will be cast on the side of decency when the time comes, and the issue is made plain. It will be seen, we believe, that providing tolerable conditions of living for those whose conditions have been intolerable was as "good politics" as it was good citizenship.

But it is by no means true that the friends and beneficiaries of unreformed tenement houses have ceased their efforts to beat the law. The Marshall bill, now pending at Albany, is the most formidable as well as the most insidious attack upon the reform that has been made. The Evening Post deserves special credit for being the first newspaper to analyze and expose it. When New York consisted of Manhattan, the moral weight of Brooklyn opinion was thrown on the side of tenement house reform, and was of good service. Now that Brooklyn is included in New York, all the selfish interests in Brooklyn that are concerned in the continuance of unreformed tenement houses are arrayed and leagued together for the purpose of securing the exemption of Brooklyn from the operation of the law. For, practically, the Marshall bill is a bill to exempt Brooklyn. A tenement house is so defined in it as to include the types of tenement houses commonest in Manhattan, and to exclude the types of tenement houses commonest in Brooklyn. Some ignorant or shameless Brooklynites have been heard even to maintain that there is no tenement house problem in that borough, that there are no slums in Brooklyn. The fact is that the inspectors of the Department have found conditions in Brooklyn too disgraceful to be overlooked, and have begun the Augean labor of putting the worst of the Brooklyn tenements into some decent and habitable shape. Hence these protests.

The builders of Manhattan have, for the most part, loyally accepted the law, or at worst have concluded that there was no use in trying to beat it. They have found that they can live and make money by conforming to it. Of course they have had to change their notions, and to exhibit more ingenuity than had been required of them before, in order to adapt their work to it. The spirit of routine is always one of the chief obstacles to progress. Apparently it is stronger in Brooklyn than in Manhattan. Certainly the Brooklyn builders more strongly and obstinately resent an interference with their habits. They will not, if they can possibly help it, be "put out of their way." If the people of Brooklyn were really desirous of maintaining their slums, and of creating a tenement house quarter that in a few years would involve all the physical and moral miseries of the worst of the unreformed tenement houses of Manhattan, the people of Manhattan might be moved to let them have their way. But it is by no means proved that this is the wish of the people of Brooklyn, and we decline to believe it on the evidence gathered by persons not exceptionally scrupulous, whose own interests lie in furnishing the dwellers in Brooklyn tenements with homes not fit to live in. And the question intimately concerns Manhattan also. Since it is necessary to make the wording general, the adoption of this bill would take away all the safeguards that have been laboriously erected around those dwellers in tenement houses in Manhattan, whose habitations happen to come under the categories exempted, for the benefit of the speculative builders, and to the injury of the tenement dwellers of Brooklyn, from the operation of the law. The bill is an abominable measure, which faithful legislators and every good citizen ought to oppose to the utmost.

THE PHILIPPINE CURRENCY.

It is not surprising that the Senate is apparently determined to do what it can to secure the passage of its own bill for the establishment of a sound currency in the Philippines in place of the bill passed by the House. This is natural from a purely party point of view. The House bill was passed by a combination of Democratic votes with a minority of Republicans, and while the latter are entitled to their own opinion, it is not to be denied that the action of the Democrats was largely inspired by a desire to bring the majority into confusion.

Apart from any partisan feeling the Senators may have in this matter, it is evident that their bill has the support of the best judges of local interests in the Philippines. It is the plan that was unanimously approved by the Civil Commission in the islands, by the Governor, by the experts sent out from Washington, and by the representative bankers of Manila. We believe that it is a plan that will work out for the stability and improvement of the currency in the islands, and that it will be safer, more practical, and more easily adapted to the existing conditions than the House plan of transferring the exact currency of the United States to the Philippines. Incidentally it is worth noting that the Democrats, in their anxiety to put the majority in "a hole," have committed themselves to a stricter anti-silver bill than that of the Senate. Precedents set with such motives have not usually much influence on future action, but this is at least a sign of returning sense.

OUR WATER SUPPLY.

On another page of this issue will be found a digest of the results thus far reached by the engineer of the Department of Water Supply, Gas, and Electricity to determine what becomes of the water impounded in the Croton Valley and brought to the distributing system of Manhattan by the existing aqueducts. The facts presented in this digest should be carefully studied by every citizen who pays taxes, directly or indirectly. They are as instructive as interesting. The startling injustice of the system of assessing the water tax for domestic consumption on the basis of the front foot measurement is well illustrated by the fact that whereas in a section of the Murray Hill district we have a daily per capita consumption of 128 gallons in an upper east side tenement district we have a per capita consumption, including still undiscovered waste, of only 27½ gallons; but the return to the city under the present system of water rates is a little over 7 cents per 1,000 gallons for the Murray Hill district, while for the tenement district contrasted with it the city collects at the rate of 10 cents per 1,000 gallons. Obviously, if the domestic use of the district having a per capita consumption of only 27½ gallons was metered, instead of its being a burden to consumers to pay for water by measure, they would find the meters a substantial economy over the frontage rates which yield the city $37,315 per annum. Facts of this character should show the fallacy of the arguments by which the popular opposition to the metering of dwellings is sustained and made plausible to the unthinking.

With the completion of the works now in hand in the Croton Valley New York will have an available supply of about 400,000,000 gallons of water per day. This is as much as London finds, or its authorities consider, necessary for the uses and waste of a population of 12,000,000. And yet we are assured that New York is confronted with the dreadful contingency of an imminent water famine. The facts show that we are, but it is obviously not because we have not water enough for the requirements of a population at least three times as great as we now claim. The work undertaken by the Department of Water Supply promises to have great educational value. It should open the eyes of all classes of citizens to the fact that in wasting water as we do we are robbing ourselves, and that to spend a hundred millions, more or less, for new watersheds, reservoirs, and aqueducts prematurely would be a misappropriation of the public money and an intolerable burden upon the taxpayer. This, however, can be averted only by intelligent co-operation between the citizens and the administration of this branch of the public business. In proportion as waste is guarded against the supply is increased, and that it may be multiplied by two or even by three is the judgment of those who are best qualified to pass judgment in the matter.

To the three Commissioners appointed by Mayor Low to study the whole problem of the water supply of New York we commend the thoughtful consideration of the fact that we are not now conserving more than half of the water which the Croton watershed yields. The average rainfall in the Croton watershed for thirty-three years is given as over 48 inches; for the past twelve years (1891-1902) it seems to have averaged 50 inches, as shown in Mr. JOHN R. FREEMAN's report. According to departmental reports more than half the water which reached Croton Lake went over the old Croton Dam to waste, as the following comparison will show:

	Brought to city and sold to be used. Million gallons.	Ran over Croton Dam to waste. Million gallons.
1891	58,875	100,774
1892	56,846	46,825
1893	52,602	118,732
1894	61,959	78,078
1895	64,085	49,529
1896	74,951	50,840
1897	76,864	68,691
1898	82,827	109,476
1899	86,509	78,520
1900	82,482	47,354
1901	83,983	96,611
1902	89,280	100,500
12 years	908,838	951,823

The arithmetic of the water proposition is really very simple. Only about one-half of the yield of the Croton watershed is now impounded. Of this half not more than one-half is accounted for. Of that accounted for about one-half represents preventable waste. The conclusion is inevitable that if we are confronted with a water famine the quickest and cheapest way to make it a matter of no concern to the present generation of our citizens is to utilize and economize the water we have.

THREE OLD BUILDINGS.

The demolition of the old Hall of Records is proceeding as rapidly as could be wished. But no more rapidly. We do not know any example of what may be called local piety more misdirected than the agitation to save this ugly old sham, the room of which is so much more desirable than its company, excepting, indeed, the proposition to take it away piecemeal and re-erect it. This latter proposition is particularly absurd, because the building has no claim whatever upon consideration except what arises from its site. To put it up elsewhere, with an inscription setting forth that it formerly stood upon the site of a prison which was at one time used as a political prison, is as fatuous a proceeding as can be imagined.

But we have, within the limits of Manhattan, two old buildings that are very well worth preserving, or rather one of preserving and the other of restoring. The first is the Morris house, commonly miscalled the "Jumel mansion." The second is Fraunces's Tavern. And there now seems to be good hope that both will be preserved.

The Morris house is the most considerable and creditable piece of Colonial domestic architecture left standing on Manhattan Island, antedating the Revolution by some fifteen years, and showing very well how rich New Yorkers lived in those days. It has both architectural and historical value, and it has the further advantage of a commanding site which would make an excellent small park.

The scene of WASHINGTON's farewell to his Generals is a monument which no patriotic American would like to see go. Happily the actual room in which the famous farewell took place remains as it was, and materials exist for the restoration to what it was of the whole house. When restored it can readily be let for more than enough to pay the cost of maintaining it.

It is both to be hoped and expected that these two relics will be spared and saved for the public. In that case we shall owe thanks to Mr. CANTON, who has shown unfailing public spirit and appreciation in this class of questions.

GENERAL NOTES.

The election in Vermont on the question of sustaining prohibition or substituting a high license law with local option is to be held on Tuesday next, Feb. 3.

* * *

Mr. William F. Wheatley has just retired from the office of Secretary of the Chamber of Commerce of Baltimore, Md., after holding the position thirty-five years.

* * *

The Troy Times, one of the last of the big folio newspapers, has put in new machinery, and has changed to the more convenient quarto form. The Times has existed for more than half a century, and is notable for its enterprise and many attractive features.

* * *

Montreal, Quebec, is to have a new French morning newspaper, to be called Le Canada and conducted in the interests of the Liberal Party. Godfrey Langlois, now editor in chief of La Patrie, is to be its managing editor. A committee of ten members will have control of the paper and the views it is to voice.

* * *

Edgar A. Bancroft was elected President of the Union League Club of Chicago last week by a vote of almost two to one, after The Tribune says, the warmest contest the club has ever known. Mr. Bancroft was a Republican Elector in the Harrison campaign, and is said to be a close personal friend of President Roosevelt.

* * *

The New Orleans Picayune on Sunday last entered upon the sixty-seventh year of its usually prosperous and always energetic though conservative career. It was a daily from the start, and it has outlived all save one of the Louisiana newspapers that were in existence when its first number was issued. There were thirty-one newspapers in the State then, seven of them being dailies.

* * *

A bill before the Alabama Legislature provides for increasing the annual salary of the Governor from $3,000 to $5,000. The Mobile Register urges, in addition, that the State provide a home for the Governor at Montgomery, the capital. A movement is also on foot in Florida to increase the annual salary of the Governor of that State. He is now paid $2,500. Friends of the measure want it increased to $5,000.

* * *

Chief Judge Alton B. Parker of the Court of Appeals has accepted an invitation from the State Bar Association of Georgia to address that body at its annual convention in July next. The meeting is expected to last three days. The Hon. Burton Smith, President of the association, will deliver the opening address on the first day, Judge Parker speaking on the second day, and miscellaneous papers by different members being read on the third day.

* * *

The Louisiana Historical Society has voted to devote two days in December next to a celebration in New Orleans of the centenary of the Louisiana purchase. As now designed, the celebration will open with a Colonial ball on Friday evening, Dec. 18, Saturday to be devoted to the entertainment of the President, an inspection of the Louisiana Historical Society exhibit, military parades, &c., and the observances concluding on Sunday with a grand pontifical mass and ceremonies at the Cabildo, in Jackson Square.

* * *

Richard G. Boone, Superintendent of Public Schools in Ohio, has recommended that the students in all the upper grades, at least, of the State's public schools take part in exercises on Thursday, Feb. 19, which shall appropriately recognize the centenary on that date of the signing by President Jefferson of the act admitting Ohio as a State into the Union. He also advises that the schools generally devote considerable time to the study of the history and geography of Ohio preparatory to the general celebration to be held from May 21 to May 28, probably in Chillicothe, of the State's admission.

* * *

The Trustees of Boston University have accepted the resignation of President William F. Warren, D. D., LL. D., who has been connected with that institution for more than thirty years, and have voted that he be paid a salary of at least $2,500 yearly as long as he lives. They also voted that he be continued in his professorship in the School of Theology with release from duty on full salary during 1903-4, and that this professorship be entitled the "Warren professorship of comparative theology and of the history and philosophy of religion." William E. Huntington, Professor of History and Dean of the College of Liberal Arts of the university, has been selected to act as President until President Warren's successor is chosen.

* * *

The Louisiana Ladies' Confederate Memorial Association at a recent meeting in New Orleans protested against the selection of George W. Cable's "Old Creole Days" as the designation of the Louisiana table at the Richmond bazaar. It is intended that each table shall be named after a book by some Southern author. One lady was loudly applauded when she said that she thought there were "plenty of brilliant Southern authors who were in sympathy with the people from whose works the title might be chosen." After prolonged consideration it was voted unanimously that the managers of the bazaar call the Louisiana table after the late Mrs. May Ashley Townsend's "Down the Bayou," as this would avoid discriminating among living authors, and the book is characteristic of the State and contains many pictures by Louisiana artists of scenes along the bayous which may be copied for decorative purposes.

Special Issues of Newspapers.

The Tacoma (Washington) Evening News worthily takes great pride in a "Prosperity Edition" which it issued on Monday, Jan. 12. It comprised sixty-eight pages, with many illustrations, and was. The News claims, an unprecedented journalistic achievement in that city. Its halftone views of Tacoma are especially attractive, and the issue contains a vast quantity of historical, commercial, descriptive, and financial matter concerning the thriving City of Tacoma and the rapidly growing State of Washington. The News says: "Tacoma's prospects for 1903 seem bright, indeed. New factory buildings are being completed every month, and fresh industrial undertakings are being launched in rapid succession. Tacoma's bank clearances for the year 1902 were greater in volume than those of six cities in the United States which led Tacoma in 1901 in this respect. There are other cities considerably larger in population than Tacoma which fall to equal Tacoma in the volume of bank clearings reported."

The Seattle (Washington) Daily Bulletin issued Jan. 1 an enlarged and handsomely illustrated number, devoted to setting forth the advantages of its State and the especial glorification of its city, "the gateway to the Orient" and the "centre of Puget Sound industries."

The New Year's Day number of The Kokumin Shimbun, issued by the Nation's Friend Publishing Company of Tokio, Japan, was worthy of the most enterprising publishers among the Yankees of the East. It consists of eighteen pages, and is printed almost wholly in Japanese on many topics doubtless of great present interest and of permanent value—to persons conversant with that language. There is one article in English giving "a brief review of the political situation, which led to the dissolution of the House of Representatives on Dec. 28, Sunday, by way of showing the standpoint of the Kokumin Shimbun on the political and social state of the country." Several quaint illustrations are scattered through the many pages, including a quarter-page picture of a Japanese dinner party, with the host and his guests seated upon the floor around the low table. There is also inserted a full-page colored cartoon representing a sedate-looking maiden of the Japanese style of beauty making a shadow picture with her fingers upon the wall. The New Year's number of the Kokumin Shimbun was a great success.

BENTON AS AN ORATOR.

Ex-Gov. Charles P. Johnson of Missouri, in a paper read at the Winter meeting of the Missouri Press Association at Columbia, talked most interestingly of Thomas Hart Benton, whom he styled the most prominent historical character of the State. In the course of his address he said:

"At the close of his last memorable campaign for Governor I heard him deliver his last speech in Missouri. It was the closing event of his remarkable political career. The place was on Twelfth Street, not far from where stands the City Hall in St. Louis. There was an immense crowd, and he received on this occasion respectful attention throughout an address of over two hours. In his appearance and manners there was no apparent apprehension of the overwhelming defeat he was to receive. The same proud, haughty, and defiant bearing was manifest in his every word and action. His personality was made as prominent as ever, his tall, robust, and commanding figure towering above all. He referred, as illustrative of his continued strength and prowess, to the fact that he had traveled over 1,200 miles, met with a continuous ovation from the people, and made forty speeches. His style on the platform was little different from that in the Senate, though slightly more condescending in tone. It was always Senatorial. He remained during the greater time in one place, occasionally advancing a step forward or turning and doing the same in a side direction. There was little variety in his poses. He held his head and body erect, the head occasionally thrown back, which increased the portliness and dignity of his appearance. When inclining forward he did so slowly and majestically. His principal gesturing was done with his right hand and arm; his left rarely was raised higher than his head. He indulged in no appeals to the kindlier emotions, and [illegible] rhetorical. He riveted attention by the clear manner in which he propounded propositions, and the strong and earnest arguments with which he sustained them. An intelligent listener was impressed with the idea that he was being taught something new. He was always historical in illustration, a department of knowledge in which he was well versed. To the majority of hearers he was most attractive as an orator when indulging in sarcasm, invective, and denunciation. During such times he became excited, raised, pointed, and shook the forefinger of his clenched fist, and in a climax brought it down with emphasis. All the characteristics I have noted were manifest in the speech to which I listened. His invective was as strong and vigorous as it ever was, and he seemed to relish the indulgence. I was reminded of the time when he asked a friend, just after his speech in the Senate on the "Omnibus Territorial bill," if he "didn't give Clay hell." He took especial pleasure in excoriating two of his well-known prominent opponents for their attitude toward him. He thought they were beyond the pale of salvation. When so aroused, his enunciation became clearer, his articulation of words was as if throwing them out separately as well as emphatically.

"Later, the meeting I was in his room with Mr. Blair and several others. I remember how impatient he was to have a correct report of his speech in The Missouri Democrat of the next day. It was his custom always to require that a proof be sent to him—he read and corrected it himself. His manuscript showed a small and cramped hand, but a printer would call it legible. While there he talked about his campaign; said he would be elected; that the people were enthusiastically in his favor. And he referred with a contemptuous smile to those parts of his address in which he demolished his local enemies.

"That was the last time I saw Mr. Benton. Not quite two years after this I stood on the steps of Christ Church, on the corner of Fifth and Chestnut Streets, in the city of St. Louis, and saw a hearse drawn by six black horses decked with sable plumes and velvet, containing the remains of Missouri's illustrious statesman. Thousands of people looked upon the scene with a feeling of awe and reverence. The drapery and habiliments of mourning were on all sides. But there was one thing in the pageant that struck me as strange and remarkable. There were many men on horseback in front, at the sides, and in the rear of the hearse, apparently among the chief mourners, who I knew to be the most implacable and vindictive foes of Mr. Benton when living. I thought it remarkable. I was quite young then, and did not understand. I am old now, and can account for it."

How Husbands Shop.

From The London Telegraph.

The pleasures of shopping are so vigorously denied to "mere man" as are the advantages of whistling to fair woman. The decree, being nature's own, is universal, and the attempts made to contravene it are new and unnecessary. An exception, more apparent than real, was made a few days ago by an uxorious Berlin husband intent on presenting his better half with a new blouse. He hurriedly entered one of the first shops in the capital and confided his intention to the graceful young lady assistant. "I want a blouse—a good one. You understand. It must be silk, the best silk." "May I ask what color you prefer?" inquired the superior young saleswoman, with a smile. "Oh, I'm not particular about the color, but I may say that it may cost from 30 to 40 marks." "And the cut?" "The cut? Well, I really don't much care; after all it comes to the same thing." "May I ask about the lady for whom it is destined?" "Why, she is my wife, of course! Whom else did you——?" "I beg your pardon. What I meant was, What is her size, at least approximately?" "It doesn't matter in the least. Please show me some blouses, one blouse, any blouse, and let me try it on. I am in a hurry to catch a train." "With pleasure, Sir; but if you cannot give me an idea of the color, cut, or size, nor anything else to guide me, how can I hope to suit you?" "Give me any blouse you like so long as the price is between 30 and 40 marks. It doesn't matter a straw what cut or color or size I choose, for in any case it's certain to be changed. I told you it is for a lady!"

The Last Dueling Clergymen.

From The Philadelphia Bulletin.

"When did clergymen cease to fight duels?" is the most startling inquiry in today's Notes and Queries. It will be news to many of us that they were ever fond of that exhilarating pastime. But, as a matter of fact, the Rev. Mr. Allan fought a duel with Lloyd Delany, Esq., and killed him in Hyde Park in 1787. He was convicted of manslaughter, and fined one shilling, plus six months in Newgate.

Wouldn't Put Sign on Post Office.

From The Pall Mall Gazette.

H. L. Hughes, Postmaster at Hughes, Plymouth Township, Penn., has resigned, and John W. Evarts, a veteran of the civil war, appointed to the vacancy. Hughes is seventy-seven years old, and has been Postmaster since the office which bears his name was established. The office is probably the only one in the country without a sign. Hughes refused to hang one out in order to avoid robbery. The net receipts of the office for the quarter ended Jan. 1, 1903, were 84 cents.

NUGGETS.

The Fire Demon Vanquished.

This is the way The Worcester Gazette headlines our Franklin Street fire: "Lurid Flames Lick Heavens!" And the Fire Department finally licked the "lurid flames."—Boston Transcript.

Painful Exposure.

Richard—Uneducated people often have a lot of insight.

Robert—That is so; our new maid knows that she is a better cook than we've been used to.—Detroit Free Press.

Business.

Merchant—Did you find out what that gentleman wanted?

New Clerk—No, but I found out what he didn't want—

Merchant—What? How dare you—

New Clerk—And I sold it to him.—Catholic Standard and Times.

Weather a Dangerous Topic.

Newitt—Well, there's one thing about the weather. It's always a safe topic of conversation.

Borroughs—I thought it was to-day when I met Lendham, but when I started to speak of it he said: "Yes, it's unsettled, and that reminds me of that note of yours."—Philadelphia Press.

Early Influences.

Lady—Oh, what caused you to drink so hard, my poor man?

Tramp—Well, mum, it's a sad story. When I was a baby I was found in a basket.

Lady—What of that?

Tramp—It was a champagne basket.—Chicago News.

KING'S MOUNTAIN.

[1780.]

John Williamson Palmer in Yale Alumni Weekly.

We lurked with Shelby in the pines,
We supped (and sulked) on Marion's fare;
Through Sumter's fens, in Sumter's lines,
We trailed when Tarleton took the air.
The limber Swamp Fox, where was he?
Who last had heard the Game Cock crow
While the Red ruffians, spurring free,
Sawed in the harvest, high and low.

'Twas Troopers here and Tories there,
A one-armed Hester's bounding blade,
Availed to lay an ambush bare,
Or pen a mountain camp afraid.
Jaunty the gibe, and grim the joke;
They guyed the slain with hideous "chaff"
And swaggering in a saure stroke,
"*That* for your quarter!" capped a laugh.

Aye! Devil's games;—but a man's,
A gruesome game;—but nobler stakes
Than forging balls from pewter pans,
Or matching straws for Johnny-cakes.
The rascal brook, that rollicked by,
Bantered and shouted with English fun;
And in the stubble, piping high,
The quail defied the foeman gun.

One night-one rain came down a flood;
At dawn the sun rolled up ablaze;
A dragoned scout, all foam and mud,
Came clattering through the startled maze:
"To saddle, mates! Wake up and shout!
And spring and fling, and have your way!
The whole keen mountain pack is out
And Buckskin whacks the bush to-day!"

'Twas Cleveland, jagged and saddle-sore;
'Twas Shelby, cramped with long leas;
'Twas flesh and blood, two legs and four,
To go where flesh and blood could go.
Blanket and Buckskin, hide and hair
Rifle and knife and tomahawk
Lank loins, without a shred to spare
And thews no hunt nor brunt could balk.

And so we scared the royal game;
The Tory scent came down the wind.
Dear Lord! we felt a hunter's shame
To strike them, dazed and deaf and blind.
We that were one in blood and breed,
Had fared as one for good or ill,
In sport or war! to cry godspeed
Met is a pit to curse and kill!

Hi-mat, illustrated!—you know the rest.
'Tis not a cheerful tale to tell.
Let some smug singer find his zest
In tuning happy rhymes to hell.
For us no braggart screed or song,
No fool's concert of blatant cheers.
The glorious Dead can do no wrong;
For them our silence and our tears.

SOCIETY AT HOME AND ABROAD

There are yet three weeks before Shrove Tuesday, and the calendar of important social events is nearly exhausted. At present the events in prospect are the dance to be given on Friday evening next by Mr. and Mrs. Whitelaw Reid, and the charity ball on Thursday. There is to be on Tuesday one more meeting of the Junior Cotillion Society, however, is hopeful and expectant. It having been whispered that William K. Vanderbilt may give an entertainment before Lent, and that Mr. Whitney has hospitable intentions. But the signs of the penitent period are beginning to be manifest. The Badminton Club is having meetings again, and the Knickerbocker Bowling Club has commenced its Wednesday sessions, and there are numerous invitations floating around to join this and that series of conferences, and to subscribe to musicales and lectures, and dates of sewing society meetings are being arranged. If this be the end of the season, the social year has been short and not over merry. It may be said by some persons the new fad for arranging impromptu affairs is at its zenith; that society is hopelessly divided into many sets, and that, to perpetrate a ball, nearly half that goes on in New York happens out of it. In other words, the fashionable world flits from suburb to town and from town to country, entertaining lavishly.

***

New York has been less gay than Philadelphia, where there has been almost ceaseless entertaining since Christmas, and where two assemblies can be supported liberally, with the Benedict ball, private dances, and any number of classes. Washington has had a busy Winter, Boston has done well, and Baltimore has been quite lively. A jolly Winter in New Orleans will end with a brilliant Mardi Gras. Abroad, London has been dreary and Paris not over enchanting. The season has hardly begun on the Riviera. Dinard has had theatricals, and Mrs. Hughes Hallett has entertained there a great deal, while in Pau the hunting set has made things lively.

***

In smaller entertainments for the week, Mrs. W. Bayard Cutting will give a dinner dance to-morrow in her residence. Mr. and Mrs. Frederic J. de Peyster will have a dinner on Monday, and Mr. and Mrs. Henry I. Barbey will entertain for Miss Barbey and her fiancé, the Baron de Neuflize, on Tuesday. On Wednesday Mr. and Mrs. Clement C. Moore will have a dinner, followed by bridge. On Thursday Mrs. Robert De Forest will give a musicale, at which the Dolmetschs will play on harpsichords, lutes, and viols de gamba, and will sing ditties of two centuries ago.

***

The trend of travel is toward the South just now. Mr. and Mrs. Cornelius Vanderbilt are to have a fortnight or more of quiet life in the land of magnolias and roses before they go to Europe and start on their Mediterranean cruise. Mr. and Mrs. H. McK. Twombly and Mr. and Mrs. Frederick Vanderbilts are to be at Palm Beach; but the Seward Webbs, with a party, are to see Winter sports in the heart of the Adirondacks. Mr. and Mrs. Scrymser will give their annual excursion, and Mr. and Mrs. Anson Phelps Stokes are to go to the islands of the Gulf and the Caribbean Sea.

***

There are not to be many weddings before Lent. On Tuesday next Miss Mary Constance Greer, the daughter of the Rev. Dr. David H. Greer, the rector of St. Bartholomew's Church, is to be married to Thomas S. McLane. The wedding of Miss Bertha Bartlett, the daughter of Col. Franklin Bartlett and Mrs. Bartlett, to Harry Horton Benkard is to be on Thursday, in Grace Church. Mr. Benkard gave his farewell bachelor dinner at Delmonico's last evening. Both weddings are to be large church affairs.

***

The past week has been very busy. It was opened with the cotillion given by Col. and Mrs. John Jacob Astor, which was a beautiful affair. Many of those who were at the dance went before to the opera, and in consequence there was in the parterre boxes one of the most representative audiences of the year. There seemed to be a return to jewels, and many of the fashionable women wore many gems. The favorite flower of this Winter seems to be the gardenia. Miss May Goelet has been wearing great bunches of violets and gardenias, and Lady Cunard had her hair dressed in the low and puffy manner which the London women have introduced this season, wearing in her hair several of the waxy blossoms.

***

On Tuesday a new and charming young hostess appeared in the person of Mrs. Stephen H. P. Pell, who was a bride two years ago. The dinner dance given at the Metropolitan Club Annex for Miss Gertrude Pell, a cousin of Stephen H. P. Pell, was a delightful affair. Mrs. Trenor L. Park gave a dinner at Sherry's that was followed by a theatre party on the same evening for Miss Jean Reid. Thursday was the date of the "small dance" in the residence of Mr. and Mrs. Elbridge T. Gerry. Everything was very well done, and there appeared a new cotillion leader—H. Pelham Robbins.

***

Friday was devoted to many of the literary set, and a very enjoyable tea in the afternoon in the studio of Burr McIntosh brought out quite a mingling of society and Bohemia. At the Alliance Française soirée in the evening there were some agreeable novelties witnessed by many of the exclusive set. Miss Margaret Ayer sang French chansons and the importation from Canada by James H. Hyde of the Montmartre Minstrels was a success. For a final bonne bouche Miss Marbury brought the Comte de Montesquiou-Fezensac, the literary lion of the hour. The private theatricals given by Judge Ingraham and Mrs. Ingraham last evening were a great success.

***

New York has become a little London at the present moment, and more bearers of English titles are sailing over the seas. The Countess of Carnavon is one of those who will be here in the beginning of the week. On the same ship are the Earl of Carnavon, the Earl and Countess of Radnor, the Countess of Lathom, and Sir Charles Howard. The Countess of Carnavon is a very pretty young woman, small and piquante. The robbery of some of her jewels recently was a nine days' sensation in London. She is the daughter of the late Charles Wombwell, and she was married to Lord Carnavon in 1895. Her husband is the fifth Earl, and he bears the name of George Edward Stanhope Molyneux. The Carnavons have a town house at 13 Berkeley Square in London. The Earl of Radnor is named Pleydell-Bouverie and Lady Radnor was the daughter of a clergyman. They live at the Manor House, Folkestone. The Countess of Lathom is a relative.

***

The arrival of Mrs. Cornelius Vanderbilt and her daughter, Miss Gladys Vanderbilt, accompanied by Mrs. Vanderbilt's sister, Mrs. William E. Shepherd, (Miss C. Moore Gwynne,) and Mrs. Elliott F. Shepard, her sister-in-law, and Mrs. James Burden, who has been in Scotland a greater part of the Winter, produced some slight commotion, as it was supposed that, on the arrival of Mrs. Vanderbilt, the plans for the wedding of Reginald C. Vanderbilt and Miss Neilson would be arranged. There was much absurd gossip and ridiculous rumor in regard to the return of Mrs. Vanderbilt and Mrs. Elliott F. Shepard. There was not the least ground for the story that Mrs. Shepard's son, Elliott, had relented his wife. The confusion in the names of Shepherd and Shepard was, possibly, the foundation of the story. Mr. and Mrs. Alfred Vanderbilt and Reginald Vanderbilt have been dropping with Mrs. Vanderbilt in her residence at Fifth Avenue and Fifty-seventh Street.

***

There has been much disappointment at the non-arrival of Miss Van Andre, the sister of Mrs. Chauncey M. Depew, and Mrs. Cornwallis West, both at the last moment having changed their minds about sailing. Several entertainments had been planned for them. Mr. and Mrs. Benjamin Guinness are being entertained a great deal since they have established themselves in the Bourke Cockran house at Sands Point. They are frequent in town. Mrs. Guinness had some superb jewels given her at her wedding. A novel idea was the subscribing by several of her friends, including the Grand Duke Michael and Countess Torby, the Duke and Duchess of Sutherland, the Duchess of Wellington, Lady Rosslyn, and many others, for a diamond and pearl tiara. The gift was magnificent, and society is waiting for a chance to see it.

***

Lady Lister Kaye, who was Miss Yznaga, seems to have come into the very front rank of hostesses. She has been entertaining the King and royalty and smart people in general. There is a rage for fancy dress dances abroad. Mrs. Bradley Martin passed the Christmas holidays at Balmacuen, where she had been giving large house parties. The Countess of Warwick brought out her daughter at a ball at Easton Lodge in Essex. She wore a gown that represented the rays of the sun and moon, worked in silver and black, with silver and black stars on the falling sleeves. In one hand she grasped a bouquet of gardenias, the scented cousin of the camellia, and the other was clasping the hand of her little son, Maynard. She wore also a Russian tiara, and, in her dress, a large knot of diamonds, with a diamond riviere, and a rope of pearls was twisted twice around her neck.

***

Lady Algernon Gordon-Lennox, who returned to England after the Horse Show, has been quite ill with influenza. She is convalescing slowly.

***

The Countess de Castellane and her sons have gone to Florida. Mrs. George Gould has been in town and she will entertain again on Thursday with a dinner that is to be followed by a theatre party.

***

Miss Evelyn Van Wart has gone to Philadelphia for a short visit. She will return to New York in a fortnight.

***

Mr. and Mrs. E. Reeve Merritt and Mrs. J. West Roosevelt have been visiting in Washington, D. C. They will return this week.

***

Mrs. Henry A. Coster and Miss M. R. Coster will have a euchre party on Saturday afternoon next. Mrs. William H. Osgood will have a bridge party also at Sherry's on Tuesday, Feb. 10, and Mrs. J. Henry Alexandre has invitations out for a euchre party on Tuesday afternoon, Feb. 17, in her residence at 10 West Thirty-second Street.

***

Mr. and Mrs. Henry S. Redmond will give a dinner on Thursday, Feb. 19, at 1 East Fifty-fifth Street.

***

A musical is to be given by Mrs. Richard Augustus Peabody to-morrow, at 29 West Thirty-ninth Street. Mme. Fritzi Scheff will sing.

***

Miss May Bird is visiting Mr. and Mrs. Sidney Dillon Ripley in their city home.

***

Mrs. Auguste P. Montant will give a dinner for her débutante daughter, Miss Marie Montant, on Thursday evening, and later will take her guests to the Charity Ball.

***

Mrs. Astor gave last evening the second of her large dinners. The guests asked were:

Mr. and Mrs. Richard T. Wilson, Sr.,
Mr. and Mrs. Benjamin Wellles,
Mr. and Mrs. T. J. Oakley Rhinelander,
Mr. and Mrs. Orme Wilson,
Mr. and Mrs. Elisha Dyer, Jr.,
Mr. and Mrs. Pembroke Jones,
Dr. Holbrook Curtis,
M. Curtis,
Mrs. Kernochan,
Mr. and Mrs. Orden Mills,
Mr. and Mrs. Whitelaw Reid,
Mr. and Mrs. Joseph Stickney,
Mr. and Mrs. E. J. Berwind,
Mr. and Mrs. J. Stewart Barney,
Mr. and Mrs. Devereaux Chapin,
Mr. and Mrs. James Speyer,
Mr. and Mrs. D. Frederick Schenck,
Mr. and Mrs. Orme Wilson,
Mrs. E. G. Bacon,
Mr. and Mrs. F. K. Sturgis,
Mr. and Mrs. Edwin M. Post,
Dr. John Woodbury,
Mrs. Woodbury,
Miss Eleanor Jay,
Miss Alice Strong,
The Misses Gladys and Beatrice Mills,
Miss Constance Livermore,
Miss Laura Swan,
Miss Pauline Robinson,
Miss Amy Townsend,
Mr. and Mrs. Clement March,
Mr. and Mrs. W. D. Sloane,
Mr. and Mrs. W. E. C. Findlay,
Mr. and Mrs. Harry S. Lehr,
Mr. and Mrs. Stuyvesant Mills,
Mrs. Adolph Ladenburg,
Mrs. Maturin Livingston,
Mrs. Charles H. Marshall,
Mrs. Richard Gambrill,
Miss Baldwin,
Robert B. Van Courtlandt,
Frederic H. Betts,
Charles A. Munn,
Lloyd Warren,
D. O. Mills,
Bradley Martin, Jr.,
Frederick T. Martin,
Comte de Montesquiou Fezensac,
Prince del Drago.

***

The theatre party that Mr. and Mrs. George Gould will give on Thursday evening is to be followed by a supper in their Fifth Avenue house. Their guests will number between seventy and eighty.

***

As announced in this column on Jan. 8, the attendants at the wedding of Miss Mary Constance Greer and Thomas S. McLane are to be Miss Daisy Greer, Miss Madeline Cutting, Miss Crocker, and Miss Adele Skiddy. Guy R. McLane will be his brother's best man, and the ushers selected are John A. Gardiner, Hamilton Stanton, Robert Gay, Edgar Seaman, Morris Parke, W. Rossiter Betts, George Scrieber, and Dr. Philip Van Ingen. The ceremony is to be performed at 3:30 o'clock on the afternoon of Tuesday, and a large reception in the rectory, adjoining the church, is to be given.

***

The engagement was announced last week of Miss Julia Fanshawe, daughter of Mr. and Mrs. William Fanshawe, and Louis Lawrence White, a son of Mrs. Foxhall Keene by her first husband.

***

A clever and original entertainment was given by Justice George P. Ingraham and Mrs. Ingraham in the annex of the Metropolitan Club last evening. The affair consisted of private theatricals, and three one-act French plays were presented, in all of which the Justice's daughter, Miss Natalie Ingraham, took a leading part. The guests were asked to come at 10 o'clock, but it was 11 before all had arrived. A small stage had been erected at the north end of the large room in the first story, used generally as a restaurant or ballroom, and the stage, under the direction of Miss Ingraham, was transformed into an excellent reproduction of a characteristic French interior. Miss Ingraham, who was educated abroad, and has spent most of her life in France, is considered one of the best amateur actresses, and last evening there were many warm plaudits and encores for her and the rest of the amateur players. The programme of the plays was as follows:

L'AUTOGRAPHE.

Comédie en 1 acte, de Meilhac.

La Comtesse .....Mlle. Gurnse
Julie .....Mlle. Ingraham
Le Comte .....Mr. Wendel
Chastenay .....Mr. Méletta
Flayto .....Mr. Cram

LES ESPERANCES.

Comédie en 1 acte, de Bilhaud.

Hermance .....Mlle. Ingraham
Horace .....Mr. Méletta

L'ANGLAIS TEL QUON LE PARLE.

Comédie en 1 acte, de Tristan Bernard.

La Caissière .....Mlle. Gurnee
Betty .....Mlle. Ingraham
L'Interprete .....Mr. Hunt
Julien .....Mr. Otis
L'Anglais .....Mr. Wendel
L'inspecteur .....Mr. Méletta
Le Garçon .....Mr. Cram

After the presentation of the plays a supper at small tables was served. The tables were placed in the rooms in the second story and also in the large room.

Among the guests asked to the affair were:

Col. Jay and Mrs. Jay,
Dr. Edgar and Mrs. Edgar,
Mr. and Mrs. Elisha Dyer, Jr.,
Mr. and Mrs. Pembroke Jones,
Dr. Holbrook Curtis,
M. Curtis,
Mrs. Kernochan,
Mr. and Mrs. Orden Mills,
Mr. and Mrs. Whitelaw Reid,
Mr. and Mrs. Joseph Stickney,
Mr. and Mrs. E. J. Berwind,
Mr. and Mrs. J. Stewart Barney,
Mr. and Mrs. Devereaux Chapin,
Mr. and Mrs. James Speyer,
Mr. and Mrs. D. Frederick Schenck,
Mr. and Mrs. Orme Wilson,
Mrs. E. G. Bacon,
Mr. and Mrs. F. K. Sturgis,
Mr. and Mrs. Edwin M. Post,
Dr. John Woodbury,
Mrs. Woodbury,
Miss Eleanor Jay,
Miss Alice Strong,
The Misses Gladys and Beatrice Mills,
Miss Constance Livermore,
Miss Laura Swan,
Miss Pauline Robinson,
Miss Amy Townsend,
Mr. and Mrs. Clement March,
Mr. and Mrs. W. D. Sloane,
Mr. and Mrs. W. E. C. Findlay,
Mr. and Mrs. Harry S. Lehr,
Mr. and Mrs. Stuyvesant Mills,
Mrs. Polly Whittier,
Mrs. Vail,
Mrs. Van Nest,
Mrs. Richard Irvin,
Mr. and Mrs. W. E. Strong,
Mrs. J. F. Pierson,
Mrs. Cynthia Roche,

Dexter Blagden,
Harry Pelham Robbins.

***

The final arrangements for the Charity Ball on Thursday evening in the Waldorf-Astoria have been made. There are only a very few boxes left, and the demand has been unusually brisk. It is to be the only large ball of the week, and, according to present indications, perhaps the last great ball of the season. Mrs. Algernon Sydney Sullivan, President of the Nursery and Child's Hospital, and the officers, Mrs. William M. Kingsland, Mrs. William C. Egleston, Mrs. F. N. Goddard, and Mrs. Edward Oothout, assisted by the Board of Managers, have been for many years active workers in this charity, one of the oldest in the city. New marches and dances are to be introduced by three orchestras. George Hammond Sullivan reports these additional members of the Floor Committee:

Theodore Layton Bailey,
Charles Edward Malmiere,
William R. McLaughlin,
Percy R. Pyne,
F. J. Oakley Rhinelander,
A. Augustus Fraser,
Roland Holt,
Frederick D. Juilliard,
McRae Livingston,
Russell Landale,
Charles B. Samuels,
L. Westervelt,
R. W. G. Welling,
William P. Wainright,
Frederick De Witt Wells,
Washington Lee Coppa.

***

Among the hostesses who have sent out cards for "dinner and the Charity Ball" are Mrs. Thomas Hicks, Mrs. Joseph Stickney, Mrs. Henry C. Eno, Mrs. Auguste P. Montant, Mrs. Henry F. Dimock, and Mrs. Herbert L. Satterlee. The Cotillion of Eighty will have a large representation. Mrs. George A. Macy will give a dinner on the night of the ball, and Mrs. Henry F. Dimock will take a party of twenty-five to the ball.

Mrs. Goddard of 2 East Thirty-fifth Street has unexpectedly several of the best boxes to dispose of, as the following persons have been obliged to relinquish those secured: No. 21, F. Layng; No. 16, J. Pierrepond Edwards, and No. 37, Mrs. Meyer. Additional names of box holders are: No. 25, Frank A. Munsey; No. 1, Mrs. Henry B. Howell; No. 23, Dr. Allan M. Thomas, and Box H, Mrs. J. Burling Lawrence and Mrs. Oliver Livingston Jones.

Naval officers who will join in the opening promenade are:

Col. R. L. Meade, U. S. M. C.
Lieut. C. W. Koester, U. S. N.
Lieut. C. W. Mathews, U. S. N.
Lieut. R. K. Crank, U. S. N.
Past Lieut. Engineer W. B. Day, U. S. N.
First Lieut. H. W. Low, U. S. M. C.
Capt. H. I. Bearss, U. S. M. C.
Second Lieut. William E. Smith, U. S. M. C.
Assistant Surgeon I. M. Lipplitt, U. S. N.
Capt. T. C. Treadwell, U. S. M. C.
Lieut. V. B. Houston, U. S. N.
Lieut. A. W. Marshall, U. S. N.
Lieut. W. I. Manion, U. S. N.
Lieut. Commander J. A. Dougherty.
Assistant Naval Commander Henry Williams.
Comm'der C. A. Adams, U. S. N.

***

The concert is to be begun at 9:30 o'clock and at 10 the managers and their invited guests will open the ball. Tickets may be had at 19 West Fifty-sixth Street, 22 Riverside Drive, 30 West Forty-ninth Street, 116 Fifth Avenue, 16 West Eleventh Street, and 23 East Sixtieth Street.

SOCIETY IN WASHINGTON.

Special to The New York Times.

WASHINGTON, Jan. 31.—Mrs. Roosevelt entertained this afternoon at a small musicale in the East Room, when some fifty or sixty personal friends were invited to hear Mme. Roget-Miclos, who gave a number of selections from Schumann, Chopin, and Liszt on the new concert grand piano which, with its gold case, is now the most conspicuous article of furniture in the entire White House. Tea was served after the music.

Hon. William D. Moody, the Secretary of the Navy, entertained at his first Cabinet dinner this evening, when his guests were received in the private suite of the New Willard. Mrs. Dewey, wife of the Admiral of the Navy, acted as hostess for the bachelor Secretary. The entire company included, in addition to the President and Mrs. Roosevelt, the Admiral of the Navy and Mrs. Dewey, the Secretary of State, the Secretary of the Treasury and Mrs. Shaw, the Attorney General and Mrs. Knox, the Postmaster General and Mrs. Payne, Miss Wilson, daughter of the Secretary of Agriculture; Justice and Mrs. Holmes, Senator and Mrs. Hale, Senator and Mrs. Lodge, Gen. and Mrs. Draper, Mrs. J. West Roosevelt, Miss Kean, Miss Lovering, Representative Foss, and Representative Gillett. The company was the largest of any Cabinet dinner of the season.

Representative Edward Morrell was the host this afternoon at a smart tea when his friends were invited to meet his mother, Mrs. John G. Johnson of Philadelphia. The drawing-rooms and dining-rooms were decorated in pink roses and an orchestra played behind a wall of palms in the upper hall. Receiving with the host and Mrs. Johnson were Mrs. William J. Hunt, the daughter of the latter, and Miss Mullan. Mrs. Leonard Wood poured tea.

Senator and Mrs. Alger entertained at dinner this evening in honor of Mrs. Hobart, widow of the ex-Vice President, who arrived this morning for a two weeks' visit to Washington. To meet Mrs. Hobart were Justice Brown, Senator and Mrs. Foraker, Senator and Mrs. Burrows, Senator Frye, Mrs. Hanna, Gen. Young, Gen. and Mrs. Gillespie, former Postmaster General and Mrs. Gary, Mr. and Mrs. J. B. Henderson, Mrs. Stanley Matthews, Miss Elisabeth Young, and J. Garrett Hobart, Jr.

The Austrian Embassy was this evening the rallying point for smart society, the occasion being the last evening at home of the Baroness Hengelmuller, who received after 10 o'clock. The drawing rooms were fragrant in green and gray with poinsettia blossoms, and the dining room, where a buffet supper was served, was decorated in pink carnations.

The handsome hostess wore a new and extremely becoming gown of Nile green silk, veiled in a network of crystal, with corsage garniture of Brussels lace and ornaments of emeralds and diamonds. The entire Diplomatic Corps and hosts of personal friends of the Ambassador and his wife called during the evening.

The arrival of the German Chargé d'Affaires and Baroness Sternburg on Friday and of the French Ambassador and Mme. Jusserand to-day will add greatly to the closing days of the season as both these distinguished couples will be very generally entertained. The Baron and Baroness Sternburg are already perfectly at home in Washington, where the former served as Military Attaché for several years before his marriage, while on his last visit to the United States he and his American wife were the guests of the President and Mrs. Roosevelt at the White House.

The French Ambassador and Mme. Jusserand will take immediate possession of their temporary embassy on Rhode Island Avenue.

The many friends of the First Secretary of the Embassy of Austria-Hungary and Mme. Callenberg will be glad to hear of the proposed return of the latter, who has been awaiting the assignment of her husband to a new post, and consequently did not return with him in the autumn. Mr. von Callenberg has very recently been notified that he will remain in Washington until May 1 sent for his wife at once, and expects her to arrive in Washington within the next ten days. Owing to the lateness of the season the Secretary and Mme. Callenberg will take an apartment at one of the hotels for the remainder of their residence in Washington, where they are both very popular.

Count Frederic Hoyos, Attaché of this same embassy, and the successor of Baron Frankenstein, who returns to Vienna next week, has arrived at his post and is likely to be a valued member of the diplomatic set.

This new Austrian Attaché is strange to say, a native Washingtonian, being the son of a former Ministry from that country who served here from 1870 to 1875, and is remembered by a very few of the older residents as a noted infant of that time, when nine perambulators and diplomatic babies were wheeled common in Dupont Circle or Lafayette Park as they are now. Count Frederic is twenty-six years of age, rich, handsome, and a bachelor.

A further distinction is that of being the brother of the Princess Herbert Bismarck, the cleverest young woman in German society to-day, the author of the novels of "Elizabeth in Her German Garden" and "A Solitary Summer," which have disturbed the peace of mind of at least three nations and afforded unmixed joy to thousands of American readers.

When the weights of life seem running down, and hope is fading with your strength, try DR. D. JAYNE'S TONIC VERMIFUGE. It's a revitalizer and a health-builder.—Adv.

THE HOSPITAL COLLECTIONS.

Charles Lanier, 17 Nassau Street, the General Treasurer of the Hospital Saturday and Sunday Association, reports the following additional contributions to the collection now in progress:

FROM THE CLOTHING AND KINDRED TRADES.

By auxiliary: Marcus M. Marks, President; J. B. Van Wagenen, Treasurer, and Messrs. William Goldman, F. Norton Goddard, Maurice Rothschild, Benjamin M. Holaman, M. Rock, Alfred Adler, S. Gutman, and George J. Ferry:

THE NEWS OF NEWPORT.

Special to The New York Times.

NEWPORT, R. I., Jan. 31.—Mr. and Mrs. Peter D. Martin have ordered the Cadwalader cottage, which they will again occupy this year, to be ready for occupancy next month. They will remain during the Summer.

Hugh D. Auchincloss, Miss Ida E. Bliss, and Mr. and Mrs. Frederick Scott White are at the Muenchinger King cottage.

Mrs. Alfred G. Vanderbilt and Reginald C. Vanderbilt returned from New York today, accompanied by a number of gentlemen, who went to Oakland Farm to remain over Sunday.

Miss Ida E. Currier of New York has purchased a large tract of land on Indian Avenue, near Newport, adjoining the Huntington and Colt estates and in the vicinity of Boothden, the Summer residence of the late Edwin Booth. Miss Currier will build a summer residence on her land.

Mr. and Mrs. Bradford Norman have closed their villa in Portsmouth and are at the Norman villa, Belair, until the Summer months.

Col. and Mrs. Reginald Norman entertained at dinner at the Barret cottage this evening.

Reception for Mr. and Mrs. A. Hitchcock

Special to The New York Times.

BERNARDSVILLE, N. J., Jan. 31.—Mrs. Horace D. Purdy of New York, who has been entertaining extensively during the past week at her country seat here, gave a large reception this afternoon in honor of her son-in-law and daughter, Mr. and Mrs. Alfred Hitchcock, who were married about a month ago. Mrs. Hitchcock wore her wedding gown, and Mrs. Purdy wore a gown of pale blue satin.

NOME A SUB-PORT OF ENTRY.

Secretary of the Treasury's Order is Expected to Add to the Alaskan Town's Prosperity.

WASHINGTON, Jan. 31.—The Secretary of the Treasury has issued an order making Nome, Alaska, a sub-port of entry. That action was taken after a thorough investigation of the whole subject by officials in Alaska, and it is expected that it will add materially to the prosperity of Nome and the whole Territory.

At present all vessels going to Nome are necessarily subject to many inconveniences and delays. Under the new arrangement vessels will enter and clear and duties will be paid at Nome the same as at all other ports of entry.

During the last Summer seventy-five vessels arrived at Nome from the United States carrying 4,000 passengers; 18,613 tons of general merchandise, 17,000 tons of coal, 1,170,244 feet of lumber, and 1,550 head of live stock, all for local consumption. During the same time 4,600 passengers sailed for the United States. The production of gold last season was about $6,000,000.

SHORTER ROUTE TO FLORIDA.

Special to The New York Times.

CHICAGO, Jan. 31.—It is the general opinion that the Evansville and Terre Haute Railway will soon change hands. There is considerable speculation as to whether the road will fall into the hands of the St. Louis and San Francisco, which controls the Chicago and Eastern Illinois, or whether it will go to the Louisville and Nashville. Both companies, it is said, are after it, and to either of them it would prove of great value. It is the connecting link between the Chicago and Eastern Illinois and the Louisville and Nashville between Terre Haute and Evansville. The three roads together give the shortest line from Chicago to Nashville, Tenn., by 150 miles, and are considered the best route from Chicago to the Florida resorts.

The financial condition of the Evansville and Terre Haute has much improved during the last year. At present it does not owe a dollar of floating debt, and is strong in cash resources. For the year ended June 30 the net earnings showed about 5 per cent. for the common stock, and the first six months of the present fiscal year will show an even more satisfactory gain. It is thought the company will be able to materially improve its earnings when it has received its 1,100 new freight cars and five new locomotives, which have been ordered. About 200 of these cars already have been delivered and paid for out of earnings, and the entire new equipment will be paid for without the issue of any securities or the creation of any car trust.

The total mileage of the road is but 307, of which only the 109 miles connecting the Eastern Illinois with the Louisville and Nashville are of great value.

BOY SHOOTS HIS UNCLE.

Special to The New York Times.

RED BANK, N. J., Jan. 31.—Richard Redway of Middletown was wounded to-day by his nephew, Lewis Hargate, aged ten, in the Hargate house while Mrs. Hargate was away for a few minutes. The boy wanted to go out of doors, but the uncle would not let him leave the house according to instructions he had received from Mrs. Hargate.

The boy became angry and, getting up stairs, he got his father's shotgun. Before Redway could escape the boy fired the gun, and the shot entered the man's back. A physician removed most of the shot but the belief is that the man cannot recover from the effect of the wound.

EPHRAIM H. CUSHMAN.

Ephraim Holbrook Cushman, who died on Friday in his residence at 337 West Twenty-second Street, was born in this city on May 18, 1832. He was a son of Don Alonzo Cushman, one of New York's old-time merchants, and a large holder of real estate, situated principally in what was the old village of Chelsea.

In his younger days he was a member of the wholesale dry goods firm of Lombard & Huttrick, and later of Marks, Palmer & Cushman. On his retirement from the last-named firm he took an active part in the management of the Cushman estate. He was a member of the Union League Club, and for the last twenty-five years Senior Warden of St. Peter's Church.

Mr. Cushman was one of the oldest residents of the Chelsea section. The members of the Cushman family live in several old-fashioned houses near the Chelsea Seminary. They and the Bayliss family had intended that part of New York for the court end of town. Mrs. Bayliss lived for many years in a mansion on Ninth Avenue.

Among the members of the family are Howard Cushman, who is a member of the Union League Club; Mr. and Mrs. Joseph Wood Cushman, (Miss Frances Rathborne,) and Victor Cushman. Several years ago a large garden party was given by Mr. Cushman for Lord and Lady Randolph Churchill in the gardens of the Cushman residences.

FUNERAL OF HICKS ARNOLD.

The funeral service for Hicks Arnold of the firm of Arnold, Constable & Co., who died on Wednesday in the Waldorf-Astoria, was

WASTE OF CITY'S WATER

Officials Getting Facts by Examining Subdivided Districts.

Murray Hill District Compared with a Tenement House District—Leakage at Mains and House Fixtures.

The facts of the use and waste of water in New York have never been known. Engineers of experience in the hydraulic problems of other cities have made shrewd guesses, and, in the light of experience elsewhere, have ventured the confident assertion that from 50 to 66 2-3 per cent. of the water impounded in the dams and reservoirs of the Croton Valley was lost in distribution or run to waste at leaky fixtures without benefit to any one. It was because the facts were not known that those interested in urging lavish and premature expenditures for new watersheds, new reservoirs, and costly aqueducts, have been in a position to disregard or deny the confident statement of experts that, in its present supply, New York has ample water for from two and a half to three times its present population, and that provision for its future needs may safely be postponed for twenty-five years, at least.

Commissioner Mourse of the Department of Water Supply, Gas, and Electricity entered office a few months ago with a realizing sense of his responsibilities, but with no preconceptions so strong that they were invulnerable to evidence. He saw that the first qualification for the intelligent discharge of his responsible official duties was to know the facts, and it has proved wise to him to preserve a judicial attitude toward the whole subject until he knew from actual and indisputable records what the truth of the matter really is. To this end, under the direction of N. S. Hill Jr., Chief Engineer of the department, and with the advice and co-operation of the Board of Commissioners appointed by the Mayor to study the whole subject of the water supply of New York, an examination has been undertaken which, when completed, should show the actual facts of the supply, use, and waste of water in New York, and permit waste to be subdivided into underground leaks of mains and house services, and leaks at defective and neglected fixtures in houses, which the application of water meters for the checking of a profitless flow which does no good would tend to correct.

The city being too large, and presenting in its several typical neighborhoods too wide a range of conditions to make it practicable to undertake its study as a whole, Manhattan was divided into relatively small districts, which, when subjected to investigation, are isolated by closing the valves or gates at their boundaries, leaving open certain mains, on which measuring instruments are placed. These measuring instruments give the quantity of all the water that flows into the isolated district during a period of twenty-four hours. The instrument used is the Cole-Flad Pitometer. It is primarily a rate meter, with a photo recorder, which indicates the flow during every hour of the twenty-four for which the meter is set.

Simultaneously with the measurements of the pitometer a house-to-house canvass is made to determine the leakage in the plumbing, the sewers are examined, and the conduits for the electrical subways are looked into. If the flow into the district seems unaccountably large, the district is subdivided again and cut off block by block until the point where the water is running to waste is located.

RESULTS OBSERVED.

Up to the present time four districts have been under investigation, and the results are considered instructive. District No. 1 is bounded by Forty-second Street on the north, Lexington Avenue on the east, Thirty-fourth Street on the south, and Sixth Avenue on the west. It may be considered a typical "brownstone" district. District No. 2 is bounded by Eighty-sixth Street on the north, East River on the east, Eightieth Street on the south, and Second Avenue on the west. It contains a large number of tenement houses.

In District No. 1, which can be designated as the Murray Hill District, the total population, according to the United States Census of 1900, is 8,400. It was ascertained that there was a consumption of 128 gallons per capita, which is about the general per capita consumption in that district, indicating an immense continuous waste not yet detected. Another fact which developed while these measurements were being taken was that the night flow—that is, the flow between 12 o'clock midnight and 4 o'clock in the morning—was 90 per cent. of the average flow for the entire twenty-four hours. In other words, during the period when it is supposed that people cannot use water the average flow kept up, probably through the overflow of tanks into the sewers.

As a matter of fact, in the large hotels, the heaviest consumers, the water meter readings showed that water was being drawn from midnight until early morning at almost the same rate as during the daytime. An inspection of the district showed also that a very large number of houses had tanks, and that the tanks filled as the pressure increased from midnight on.

In contrast to the Murray Hill district is the second district, an upper east side tenement neighborhood that has a population of nearly 40,000, according to the United States census of 1900, and uses 1,440,000 gallons of water a day. The gross per capita consumption is only 37 gallons, and if the actual leaks in the house plumbing, which were found and measured, were taken into account, the net per capita consumption is only 27½ gallons. If all the leaks were found it would probably be much less. In this district the night flow was only 50 per cent. of the day flow, and, after the leakage in the house plumbing was deducted, the flow at night was very small. The conditions in the district were normal. There were no indications of important leaks in the mains, and the thing necessary principally was that the house plumbing should be attended to.

"REVENUE FROM DISTRICTS."

A further comparison has been made between the Murray Hill district and the tenement house district. The daily supply of water in the two districts is approximately the same. In the former 1,470,000 gallons, and in the latter 1,440,000 gallons. The leakage in the mains in the districts is believed to be slight. The leakage in the house plumbing in the Murray Hill district, as far as has been ascertained, is a little more than 40,000 gallons a day. In the tenement house district the house leakage reported is 369,000 gallons a day. The water sold by meter measurement in the Murray Hill district is 638,000 gallons a day, and it produces a revenue to the city of $31,000 a year out of a total revenue for the entire district of $49,115.

In the tenement house district only 293,000 gallons are sold by meter measurement, producing a revenue of $14,550 out of a total of $51,861. From a small amount of water in the tenement house district and a larger amount definitely known to be running to waste, a larger revenue is produced, and this notwithstanding the fact that 40 per cent. of the water is metered in District No. 1, and about 20 per cent. in District No. 2.

On the total consumption in the Murray Hill district the city receives a little more than 7 cents for 1,000 gallons. In the tenement house district, the city receives on total consumption nearly 10 cents for 1,000 gallons. For water supplied on frontage rates, which is practically all the water that runs into the district, less what is actually measured by meters, it appears that for 832,000 gallons a day supplied to District No. 1 the city receives a yearly revenue of $18,115, while from 1,147,000 gallons supplied to the upper east side tenement house district (No. 2) the city receives a total revenue on frontage rates of $27,615. These figures demonstrate, it is said, not only the unfairness of frontage rates, but that the extra burden falls upon those least able to bear it.

If the figures for District No. 2 are analyzed critically it will be found that of the total per capita consumption of 37 gallons a day, 9.5 gallons are lost by measured leakage at fixtures. This is more than one-fourth of the daily per capita consumption. Twenty gallons are divided between unmetered consumption and street main leakage. The metered consumption accounts for only 7.5 gallons per capita daily.

The flow in a third district has been measured also. It is on the lower east side and is bounded by Grand Street on the north, the East River on the east, Market Street on the south, and Division Street on the west. It contains a population of about 20,000 and the consumption approximates 60 gallons per capita, but the plumbing leakage has been found to be very great and has not been measured fully, and other data have not been completed yet.

The work thus begun is to be continued until the city has been covered. The next districts to be studied are a down-town business section and an apartment-house neighborhood west of Central Park. The belief is that long before the entire city has been gone over a comparison of typical neighborhoods will afford a basis for safe and conclusive generalizations as to what becomes of the water from the Croton shed and what are the conditions of our mains, house connections, and indoor plumbing work.

DEATH RATE OF THE STATE.

Mortality Figures for 1902 Equal the Average for the Last Five Years in New York.

ALBANY, Jan. 31.—Vital statistics for 1902, issued to-day by the State Department of Health, show that there were 124,160 deaths during the year, a rate of 17 for each thousand of population. This is the average rate for the five preceding years, but less than the mortality of 1901.

The infant mortality is low, almost 5,000 less than the average. The zymotic mortality was 14 per cent. of the total, being above the average. Stomach troubles caused a very low Summer mortality. Scarlet fever continues the abrupt increase of last year. Diphtheria has the same rate of the last four years. Typhoid fever increased moderately in the maritime and Hudson Valley districts.

Smallpox existed in the early months throughout the Adirondack region, where it has not recurred save to a limited extent this present Winter. During the year the disease has developed in 135 municipalities in all parts of the State, including New York City and towns in Westchester County. It caused the same mortality as in 1901, but was more extensively prevalent. It exists now at Rochester and vicinity, abating, and in towns in Clinton, Chautauqua, and Delaware Counties.

There were 8,800 deaths from pneumonia and about 5,500 from Bright's disease. The acute respiratory mortality was a little below the average. Grip was estimated to have caused 4,000 deaths in the early months of the year. Its annual recurrence in November and December has been moderate, causing probably not more than 500 deaths.

PROTESTS AGAINST THE BIBLE.

State Superintendent Reports an Increase in the Opposition to Reading in the Public Schools.

Special to The New York Times.

ALBANY, Jan. 31.—The State Superintendent of Public Instruction reports that there has been a great increase during the last year in the number of protests against reading the Bible in the public schools.

Correspondence which he has had with the Superintendents of Public Instruction in other States has shown that the Bible is read in the schools of most of them, and in none of them does the custom seem to have aroused the amount of opposition encountered in New York.

There is a statute which provides for the reading of the Bible in the schools of New York City, and it has been read in those schools under this provision of law for nearly fifty years. The State Superintendent says that during the seventeen years he has been at the head of the Department of Public Instruction he has never heard of a protest from New York City against the reading of the Bible. He is therefore loth to adopt the rule of his predecessors, that the Bible shall not be read in the schools up the State.

McKinley Dispensary for Italians.

ALBANY, Jan. 31.—The McKinley Dispensary of New York City has made application to the State Board of Charities for incorporation. It is organized to maintain a dispensary especially for persons of Italian origin. The Directors are John A. Price, Max Ghertler, L. K. Bowd, Michael Viccali, and Marcus Schnitzer of New York City.

NEW DOMINICAN SEMINARY.

The Order to Erect a Building in Washington and Transfer Students from Somerset, Ohio.

Special to The New York Times.

WASHINGTON, Jan. 31.—A new building for the education of students is to be erected by the Dominican Order on the south side of Bunker Hill Road, opposite the grounds of the Catholic University.

The Dominicans until now have educated their students at Somerset, Ohio, but the seminary there, it is said, is entirely inadequate to the needs of the present day. The chief work of the Dominicans after the cultivation of theological science is the preaching of missions, and they have not a sufficient number of priests to meet the demands. A new and urgent reason for a more spacious educational institution has arisen from conditions in the Philippines. Two Dominican fathers now in the United States have been ordered to Manila, and three more are in Rome preparing for work in the East. It is certain that a considerable number of American Dominicans will be called to duty in the islands, and they are to be trained for that work in the Washington seminary.

The plan for the building has been prepared by A. O. Von Herbulis of this city. The new structure will be 182 feet in width of front and 210 feet in depth, built in the form of a quadrangle, inclosing a court 110 feet square. The work of building will be started in the Spring, and it is expected that within two years the professors and students now in Somerset will be able to take possession.

Mgr. Quigley's Promotion.

WASHINGTON, Jan. 31.—The Pontifical brief promoting Mgr. James F. Quigley from the See of Buffalo to the Archbishopric of Chicago was received by the Apostolic Delegation here to-day.

FOUR PHYSICIANS DISMISSED.

Dropped as City Vaccinators by Commissioner Lederle for Making False Reports of Their Work.

Four physicians were yesterday dismissed from their positions as city vaccinators by Commissioner Lederle of the Health Department for making false reports of their work. These officials are required to make weekly statements to the department giving the names and addresses and other particulars in regard to persons whom they have inoculated. Inspectors are upon occasion sent over the same territory to verify these reports, and it was through this detective system that the men got into trouble.

Dr. Peter Schaeffler of 433 East Eighty-seventh Street, one of those dismissed, reported that he had made sixty-five inoculations in a certain week, but the department has only been able to find thirty of these people, and of these only ten had been vaccinated.

Dr. W. K. Jacobs of 369 Fifteenth Street, Brooklyn, reported ninety-three vaccinations in a week. Only an even dozen were found.

Dr. Max A. Wachsler of 662 East One Hundred and Thirty-fourth Street is charged with making a false report of his work in the Bronx.

But the worst report of all, according to the board, was that of Dr. James J. Grady of 967 Washington Avenue. Not one of the persons he claimed to have vaccinated could be found, and many of their alleged addresses were vacant lots.

The loss of their positions may not be the only penalty to befall these doctors, for under Section 1,296 of the charter their alleged offense is a misdemeanor, punishable with a fine of $500 or imprisonment for one year.

CONGRESSIONAL NOTES.

A joint resolution was introduced in the House yesterday by the Chairman of the Judiciary Committee proposing an amendment to the Constitution prohibiting polygamy.

Representative Randall of Texas yesterday introduced a bill to render certain corporations operating in the Indian Territory liable for damages sustained by employes as a result of negligence on the part of the corporations.

The House Committee on Patents yesterday favorably reported the bill carrying out certain recommendations of the International Convention at Brussels, having under consideration patents and trade marks.

A concurrent resolution was introduced yesterday by Representative McClenry of Minnesota, providing for the printing of 14,000 copies of the proceedings of the unveiling of the Rochambeau Statue, 1,000 of which are to be delivered to the French Ambassador for his disposition.

Representative Daizell of Pennsylvania yesterday introduced a bill directing the Secretary of the Treasury to appoint a commission to recommend to Congress such changes in the revised statutes of the United States as will bring about the improvement of construction and secure a uniformity of inspection of all marine boilers and their appurtenances.

STATE CAPITAL POLITICS

Democrats Hope That the Elmira Gerrymander Will React.

J. Sloat Fassett Welcomed as a Prodigal Son—Automobilists Favor the Good Roads Movement.

Special to The New York Times.

ALBANY, Jan. 31.—The Elmira gerrymander bill will come up for final disposition in the Senate to-morrow night. Senators Brackett, Brown, and Elsberg say that their action in voting against their party associates on the motion of Senator Raines to substitute the Assembly for the Senate bill is not to be taken as an indication as to what their action will be when the measure is considered upon its merits.

In what they did last week they were actuated principally by a desire to punish Senator Raines for a slight of Senator Elsberg. It is possible therefore that one or all of them will vote for the gerrymander proposition. Any one of them can carry it through, as the bill has been made a party measure.

That the chief object of the bill is to give the Republicans a partisan advantage is not seriously denied. If any proof were needed as to the politics involved it would be furnished by the fact that the chief champion of the bill is J. Sloat Fassett, the Republican leader of the county, and its chief opponent John B. Stanchfield, the Democratic leader, and the further fact that it has been made a party measure.

In connection with this bill it is being recalled by the Democrats that one of the acts which brought about the downfall of the Democracy in the State was the gerrymander of Rochester. This measure was fathered by Jacob A. Cantor, who was then the Democratic leader in the Senate. The criticism which it caused is believed to have been responsible in a large degree for the subsequent Democratic disaster.

Remembering how their own political "crime" against Rochester was punished, the Democrats are consoling themselves for their inability to thwart the Republican attack upon Elmira with the reflection that perhaps the so-called "crime" will bring its own retribution to the Republicans as it did to them.

***

The return of J. Sloat Fassett to active politics is welcomed by Republicans generally. Mr. Fassett is a man of personal magnetism, his fund of wit and humor making him one of the most pleasing political platform orators in the State. His temporary retirement from active politics, as is well known, was due to his temerity in setting up his will against the mandate of Senator Platt.

Mr. Fassett decided to devote his energies to money making after his defeat. His success in this direction has been remarkable. Several years ago a friend of his got him interested in a gold mine in Corea. He went out to that country to look at the property. His inspection satisfied him that it was a good thing. So he put into it all the money he had and all he could realize. His investment is said to have been $400,000. He has since taken out all that he put in and has had an offer of $1,000,000 for the interest which he retains in the mine.

Sometime since Mr. Fassett made peace with Senator Platt and the Senator consented that he should come back into the fold, but insisted that his return to grace should be attended with proper humility in order that no encouragement should be given to the crime of lèse majesté.

Mr. Fassett asked if it would be too much for him to aspire to the leadership of his county. The Senator said it would not, and so Mr. Fassett announced himself as a candidate for that place. His gift of eloquence and the spread of information about his gold mine in Corea won for him an easy victory.

He is not a man to remain in the background. For a man who has been a candidate for Governor and an aspirant for an United States Senatorship the sphere of action afforded by the leadership of a county like Chemung is somewhat contracted. His scheme to make the Democrats of the Sixth Ward of Elmira cross twelve railroad tracks in order to get to a voting booth, however, is winning for him some of the political attention which he commanded before.

***

Chautauqua County has reached a compromise on the fish-spearing industry in Chautauqua Lake. At a hearing before the Assembly Committee on Forest, Fish and Game last week it was agreed that spearing should be permitted the four Thursdays in February, but immunity should be given to the muskallonge on all other days.

Now trouble in Chautauqua is scented on the skunk issue. Mr. Fowler has introduced a bill which provides for the repeal of the present law prescribing a closed season for skunks and permits of their destruction at any time. They have become so numerous in the county that the residents never know at what moment a meeting with one of these animals will cause temporary estrangements in families.

The residents of the cities and towns are said to be practically unanimous in desiring legislation which will be designed to lessen the number of skunks in the county, but the farmers are inclined to have the skunk protected. At a recent meeting of Pomona Grange the question of whether the Fowler bill would be supported not came up, and after considerable discussion the Grange adjourned without taking action.

It was urged on behalf of the skunk that he was useful to the farmers in that he destroyed bugs which preyed upon crops. The whole matter seemed to resolve itself down to a question as to the relative importance of crops and clothes, and the Grange was unable to decide what position it ought to take.

***

The attempt of the good roads men to tack on a "rider" to canal legislation providing for the issue of $50,000,000 worth of bonds for the improvement of the roads of the State has led to inquiry as to what the State has been doing for the reconstruction of highways.

Under the Higbie-Armstrong act the State appropriates 50 per cent. of the cost of all work done on highways under the supervision of the State authorities. The remaining portion of the cost is borne by the towns and the counties in the proportion of 35 per cent. for the town and 15 per cent. for the county. If all the applications for road improvement now in are favorably acted upon this year the State will be called upon to make an appropriation of $2,000,000 to cover its share of the cost of the work to be done.

State Engineer Bond says that the average cost of road improvement under the plan which is being followed is $8,000 a mile, but some of the new roads have cost as high as $15,000 a mile. Mr. Bond has prepared a plan by which every county seat in the State, with the exception of the county seats in the Catskills and Adirondacks, would be connected by improved roads. The estimated cost of carrying out this plan would be $10,000,000.

The growing popularity of automobiles has brought to the good roads movement the support of an influential class of citizens, and it is said that this class is secretly favoring the proposal to insist upon a bond issue for good roads as supplementary to the proposition to issue $52,000,000 worth of bonds for the improvement of the canals.

Despite the fact that the farmers, who are the chief beneficiaries of good roads, are only compelled to pay 15 per cent. of their cost, the remaining 85 per cent. being paid by the town or city benefited and by the State, Mr. Bond says that the farmers offer more opposition to the scheme of improvement than do the residents of towns and cities.

***

A weekly paper is now being published in Albany in the interests of labor. It is understood to have the official sanction of the labor organizations of the State. It is chiefly devoted to praise of bills which organized labor favors and attacks upon measures which organized labor does not indorse. How closely the attitude of members of the Legislature toward organized labor is studied is revealed by the following paragraph, which is a fair sample of the paragraphs on the editorial page:

"There are few members of the Legislature who wear hats without the union label. And these hats cover gentlemen chosen from industrial districts. We hope this paragraph will catch their eyes, and work a speedy reform. Else the 'Twilight Club' may pay them a visit."

ANNOUNCEMENT.

Franklin Simon & Co.,

H. A. FLURSCHEIM. FRANKLIN SIMON.

FIFTH AVENUE,

37th and 38th Streets, New York.

Beg to announce that they expect to open their new five story building on February ninth with an elegant and unequalled assortment of

Infants' Outfitting, Boys' and Young Men's Clothing, Hats and Furnishings, Girls', Misses' and Young Women's Clothing and Shirt Waists, Order Department for Boys, Young Men, Girls and Young Women.

Prepared by a corps of specialists, through whose expert work the new store is enabled to offer its patrons—

The most efficient and agreeable service, the highest degree of excellence in merchandise, and a range of prices lower than has ever prevailed for goods of similar character.

FRANKLIN SIMON & CO.

REPUBLICANS WIDE APART

Personal Bitterness Is Coming Out in the State Senate.

Senator Malby Has Been Leading Recently Oftener Than Senator Raines, but with Little Success.

Special to The New York Times.

ALBANY, Jan. 31.—Although Senator John Raines was elected the Republican leader of the Senate, it is a fact which has been much commented upon that Senator Malby, Chairman of the Finance Committee, has been doing most of the leading. About the only occasion when Senator Raines undertook to direct the majority was on the Elmira gerrymander bill, and in that fight so far he has been worsted.

There has been considerable speculation as to the reason why Senator Raines has been keeping himself in the background. One explanation is that inasmuch as the three bolters had declared their preference for Senator Malby as a leader if the choice lay between them, he consented to have Mr. Malby do the leading, at least for a while. Another story has it that Mr. Malby has acted on his own initiative, and does not feel the same obligation to take orders from Mr. Raines that he did from Col. Ellsworth, who was the Republican leader at the last session.

Be this as it may, the fact is that Mr. Malby has had no better success in his attempt to lead than Raines has had. In fact, in his fight to have referred to his committee the bill changing the period of residence required for cripple children to gain admission to the State institutions, he was ignominiously beaten, a number of the Republican Senators besides Brackett, Brown, and Elsberg voting against him.

Events which have occurred in the Senate during the last week and the comments which have been made in private conversation by Republican Senators have revealed that there is a surprising amount of personal bitterness among members of the majority. The independent spirit appears to be growing, and it seems not unlikely that the Republican bolt will gain in proportion before the session is over.

The dislike of Mr. Raines is by no means confined to Senators Brackett, Brown, and Elsberg. There are other Republican Senators who do not approve of him as a leader, and their disapproval may yet take the form of open protest.

Putting forward Senator Malby as a co-leader is not likely to help things. His ability is conceded and he is fairly well liked, but seemingly he is lacking in that diplomacy which is necessary to successful leadership. For years he has been more or less of an independent. His county, St. Lawrence, is overwhelmingly Republican, and his power with the organization there is such that no one has dared to dispute his supremacy. He was elected this year without opposition of any character.

His security from the misfortune which usually overtakes county leaders who do not do the bidding of the State leaders has bred in him a spirit of independence which has heretofore made him somewhat indifferent to the dictates of those who assume supreme authority in party councils. In playing the rôle of a strict organization man he somewhat resembles a fish out of water. Accustomed as he has always been to act as he was disposed, he apparently has not appreciated the necessity of having a thorough understanding with his associates on matters of party policy.

It is probably on this account that on several occasions Mr. Malby has found himself without needed support. A notable instance in point was his attempt to have all resolutions for printing extra copies of bills referred to the Finance Committee.

When Lieut. Gov. Higgins was the Chairman of the Finance Committee he always insisted that such resolutions should go to his committee. Nevertheless, when such a resolution was introduced early in the session, he referred it to the Committee on Printing, holding that it should consider such measures. When Mr. Malby appealed from the decision of the Chair, it was evident that no attempt had been made to reach an understanding among Republicans.

Senator Malby was very indignant over his defeat and made some audible references to the power of the printer's ring.

The Democrats seem to realize the opportunity which is presented to them in the dissensions of the Republicans and defective Republican leadership, and they are acting together this session more harmoniously than they have in several years.

Errors in the Alaskan Treaty.

WASHINGTON, Jan. 31.—The Senate in executive session to-day returned the Alaskan boundary treaty to the President for the correction of two clerical errors. One of these is in the matter of the title of King Edward and the other consists of the description of the tribunal created by the treaty as "a tribunal of arbitration," whereas, owing to the fact that there is no umpire, it is not so regarded. Secretary Hay discovered the errors. They will not affect the status of the treaty.

Judgeship for Mr. Vandevanter.

WASHINGTON, Jan. 31.—President Roosevelt to-day signed the bill recently passed by Congress creating an additional judgeship for the Eighth Judicial Circuit of the United States. Late this afternoon he made a personal tender of the judgeship to Willis Vandevanter, Assistant Attorney General for the Interior Department, and the proffer was accepted.

More Enlisted Men for the Navy.

Special to The New York Times.

WASHINGTON, Jan. 31.—A proposition is before Congress to increase the enlisted force of the navy by 5,000 men. According to the latest returns, the enlisted strength is 26,790, and that number is being increased by enlistments which, it is expected, will bring the force to the maximum within a few weeks. Under existing law, the maximum strength is limited to 28,000.

MR. MORGAN BURLESQUED

Financier Hears Quips on Himself at Gridiron Club Dinner.

President Roosevelt's Policy in the South Also Made the Subject of Jests in Washington.

WASHINGTON, Jan. 31.—J. Pierpont Morgan, as one of the guests of the Gridiron Club this evening, witnessed a burlesque on his business methods at the Arlington Hotel. Prominent men in the financial world mingled with army and navy chiefs, political leaders, and diplomats at the annual dinner of this organization of Washington newspaper correspondents.

The dining hall of the Arlington Hotel was handsomely decorated. The flowers upon the table, palms and ferns about the room, and a novel arrangement of electric lights produced a beautiful effect.

William E. Curtis, the new President of the club, was inaugurated, and reference was made to the part Mr. Curtis took in securing the attendance of Spanish grandees at the World's Fair at Chicago. The pomp and ceremony of the Spanish Court of 1492 and twentieth century ideas and events were mingled in the burlesque. One of the questions propounded to Columbus was, "What Is a Trust?" to which he answered, "A bunch of money surrounded by water."

Mr. Morgan was made the subject of the best burlesque of the evening. For the alleged benefit of the New York financiers the Gridiron Club installed "a bucketshop" as an adjunct to Mr. Morgan's office. The manager and "chair warmers" kept up a lively fire of questions and answers, in which various guests were placed upon the gridiron. Discussion of available Presidential candidates was a feature of this part of the entertainment. The burlesque concluded with a song dedicated to Mr. Morgan.

Experiments which Dr. Wiley of the Agricultural Department is making with borax as a preservative, afforded another vehicle for roasting prominent guests. It was announced that Dr. Wiley was conducting an experiment at the dinner. Two members of the club, personating Prof. Wiley and his assistant, showed the effect of borax on the brain. A "poison squad" was brought out, and the stethoscope and X-rays applied to their heads. The marvelous things which they were found to be thinking about, as told by the operators, created great amusement.

The initiation of Joseph K. Ohl of Atlanta and John P. Miller of Baltimore, who were made to personate leaders of the "Lily Whites" and "Black and Tans," respectively, gave room for witty references to the President's Southern policy.

There were other skits, many topical songs and choruses, and speeches by the guests.

The menu card was a calendar, with each month illustrated with the picture of a prominent guest, whose business or chief personal characteristic was indicated in a rhyme. The menu was:

Cape Cod Specials
Consommé of Chicken, with Quenelles.
Terrapin, Arlington Style.
Saddle of English Mutton, Spinach.
Sweetbreads Croquettes, Green Peas.
Gridiron Punch.
Philadelphia Squabs, roasted, Cheffonade Salad.
Ice Cream Plombiere.
Cigars. Coffee.
Wines.
Sauterne.
Moet & Chandon Brut Imperial.
Apollinaris.

Among the guests were Mr. Morgan, George F. Baker, Robert Bacon, George H. Daniels, C. A. Small of New York; Samuel Spencer, President of the Southern Railroad; F. D. Underwood, President of the Erie Railroad; Melville E. Ingalls, President of the "Big Four" Railroad; George W. Ochs of Philadelphia; Joseph Medill McCormick of Chicago, Rokuichiro Masujima, Japanese Counselor of the Embassy; the Russian Ambassador; Sir Michael Herbert, the British Ambassador; Count von Quadt, Secretary of the German Embassy; Señor Emilio de Ojeda, Minister from Spain; Lord Charles Beresford; Senators Aldrich, Beveridge, Depew, Dillingham, Dolliver, Dryden, Fairbanks, Hanna, and Kearns; Senators-elect Gorman and Stone; ex-Senator Thurston, Representatives Cannon, Foster, Grosvenor, Heatwole, Hull, Littlefield, Loudenslager, Mercer, and Moody; Govs. Murphy of New Jersey, and Terrell of Georgia; ex-Gov. Crane of Massachusetts, Secretary Cortelyou, Director of the Census Merriam, Rear Admiral Schley, Rear Admiral Bradford, Capt. Cowles, Lieut. Commander Knapp, United States Navy; Major Littleton W. Waller, United States Marine corps; Major Gen. Corbin, and Brig. Gen. Randolph.

GENERAL STAFF BILL PASSED.

Senate Accepts House Measure, Amending It to Take Effect on Gen. Miles's Retirement.

WASHINGTON, Jan. 31.—The Senate today passed the House bill providing for the creation of a general staff of the army, and added as an amendment the bill providing for the retirement with increased rank of officers who served in the civil war. The amendment is in the words of the retirement bill as it was recently reported by the Senate Committee on Military Affairs.

The text of the staff bill proper was not changed, except that an amendment was added providing that it shall not go into effect until August 15 next. That is the date of the retirement of Gen. Miles, and the amendment was made in deference to his opposition to the measure. The bill already has passed the House, and but for a notice by Senator Ferry that he would ask to have the vote by which the bill was passed reconsidered, it would now go to conference.

B. Altman & Co.

Dressmaking and Tailoring Rooms

(Third Floor.)

NEW MODELS OF EARLY SPRING STYLES are shown in

Reception and Evening Gowns, Street and Outing Suits, Riding Habits, etc.,

for which orders can be taken and finished at short notice and at MODERATE COST.

Attention is invited to a choice collection of

Oriental Rugs,

comprising select specimens of FINE PERSIAN RUGS, among which are Kirmanshahs, excellent in design and texture, and of unusually soft color, suitable for Salon or Reception Room, also examples of Tebriz, Saruch, Serape, Herat, Khorasson and other well-known makes, desirable in size, color and design for Halls, Libraries, Dining and Smoking Rooms, etc.

East India and Turkish Rugs,

in exclusive designs and colorings adapted to modern decorations, delicate cream grounds, Rose, Light Green, etc.

In addition to the above, a complete collection of FINE PERSIAN, SHIRVAN and KAZAK RUGS, in small and medium sizes is shown.

Persian Silk Rugs for Decorations and Covers.

Imported White Goods

for Spring and Summer, embracing an assortment of designs in French Plumetis, Embroidered Piqués, Mercerized Madras, Figured Swisses, and Embroidered Mulls.

Also Silk Mulls, India and Renaissance Mulls, Batiste, French Nainsooks, Dimities, Linen Lawns, Persian, Victoria and India Lawns, Organdies and Paris Muslins.

Women's and Men's Gloves

of Glacé and Suède Kidskin, for Street and Dress wear; also of Reindeer, Mocha and Cape, for Riding, Driving, Automobiling, Golfing, etc.; Silk Lined Suède and Mocha Gloves.

ALSO CHILDREN'S GLOVES.

The Marvex Glove in fashionable Street and Evening shades.

For MONDAY, February 2d:

Women's Heavy Walking Gloves,

Suède finish; Tan and Greys; Regular price $1.95, at per pair, $1.00

(Rear of Rotunda.)

Commencing MONDAY, February 2d, a special sale will be held of

Fancy Dress Silks,

15,000 yards at . . per yard, 58c.

COMPRISING A VARIETY OF SHEPHERD'S CHECKS, HAIRLINE STRIPES, PRINTED GRENADINES, ETC.,

FOR SHIRT WAIST SUITS, SEPARATE WAISTS AND EVENING WEAR.

(Rear of Rotunda.)

Eighteenth Street, Nineteenth Street, Sixth Avenue, New York.

J. & J. SLATER

BOOTMAKERS

ANNUAL SALE

OF

High Class Shoes

FOR

Men, Women and Children

COMMENCES FEBRUARY 2d

BROADWAY, Cor. 25th Street.

ALASKA'S PRESENT NEEDS

Col. Sutherland Discusses Conditions and Legislation.

Mining for Copper in Valdez—Slow Progress of Railroads—The "Jumping" of Claims in Winter.

Better laws for the security of the settler are essential to material improvement of conditions in Alaska, according to Col. W. J. Sutherland, who has returned from a year's sojurn in that Territory, as a mining engineer and operator, and is stopping at the Fifth Avenue Hotel.

"Political questions," said the Colonel to a NEW YORK TIMES reporter, "are causing something of a muddle in Alaska, and things have been a good deal mixed since several men have been seeking the office of Territorial Delegate to Congress. It is very important that a wise selection be made in this matter. Alaska needs above all a representative of ability and unquestioned integrity.

"Better protection in their legal rights than is now accorded the people there is necessary, and more adequate facilities to secure titles to property in the towns. If a man wants a homestead or a tract of land, he can take it up, but much of it is needed in Alaska to make a living. It is not nearly so valuable as in Arizona and other Territories.

"There should be changes, too, in the mining laws to conform to the conditions of the country. There should be special legislation providing for a Mining Commissioner, as in British Columbia. The Winters are so severe in Alaska that many men do not stay on their claims to protect them, and when they return at the close of the cold season, find their property has been jumped. While the appointment of a Mining Commissioner would be an innovation of the mining law, it would be a good thing in Alaska, giving owners a clear title to their claims, which could be maintained in the courts.

"Our Government seems to forget that it costs a great deal more to live in Alaska than it does down here. The pay allowed Federal Judges is miserably small, and any mediocre lawyer can make more money in three months than the annual salary of a Judge. Judge Johnson, who was at Juneau, soon discovered that fact, resigned and is now practicing law at Nome.

"The climatic conditions in Alaska are very peculiar. Where the Japanese Current comes in it is very seldom cold along the coast, but four or five miles inland extreme cold prevails. There was little or no snow at Juneau when I left, but at Silver Bow Basin, five miles inland, there was twenty-five feet of snow. On Jan. 6 twenty-five of our men were caught in an avalanche, but we managed to dig them all out and no lives were lost. There is, of course, no placer mining in Winter, but in quartz mining the weather makes little difference, although in many places the ground is frozen from the surface to bedrock. Mining is going on now at Porcupine, Atlin, and Nome, and the snow is not deep except at Porcupine.

"There are few agriculturists in Alaska. The talk that everything can be grown there should be taken with a grain of salt. I am satisfied that no place can grow better lettuce, cabbage, onions, and cucumbers, or, in fact, any truck of low and rapid growth. The days are twenty hours long in the Summer, so that there are no cold nights. But I do not believe that grain, wheat, or oats can be successfully raised. Those products need time to mature. They grow tall enough, but contain little substance. So it is with the grass. Persons owning cows feed them with material obtained in Oregon, Washington, or California because the Alaska grass contains no nourishing strength for milk.

"Many railroads are being built in Alaska—on paper. To see some of the circulars one would expect to find trains running, whereas in some instances surveys have not even been made. Jack Dalton has been laying out trails for the Government, but some of these had to be abandoned.

"I heard reports that 100,000 persons were expected to be in Valdez in March. Valdez contains much copper, but the properties have not been developed and there is not enough to be done there just yet to keep 100 men working for any length of time. That is my candid opinion, regardless of the statements of the steamship companies that there is a great opening at Valdez. There is talk of building a railroad from Valdez to Eagle City, establishing an all-American route to Dawson City.

"My advice is that people should not go to Valdez until the country is developed. If they do, the Government will have to send boats to get them back.

"The Alaska Central is projecting a railway from Resurrection Bay to Rampart City, about 416 miles. F. A. Heinze, the Montana copper man; Gov. McGraw, and Gen. Dickinson are back of it, and it is possible it may be built, if the projectors see the country is worth developing.

"Another railroad is contemplated from Pidalgo Bay to the Copper River country along the Yukon River to Rampart City. The Copper River country is at the headwaters of the White River, and the Tananna River strikes it about fifteen miles from Pidalgo. This road will be built in sections of about fifteen miles each. That is, fifteen miles will be first built, and if the revenues warrant it a second fifteen miles will be constructed, and so on as the business demands. There is an abundance of excellent coal in the section. Pidalgo is a fine, land-locked harbor, with about fourteen fathoms of water. It is never frozen over and affords a sure outlet the year round.

"There are magnificent timber forests in that country, too, with an abundance of fir, hemlock, and yellow cedar. Some of the cedars grow to a height of 200 feet, than 200 feet and exceed 15 feet in diameter near the base. The only way this timber land can be acquired is by putting on soldier scrip, and this would cost from $14 to $18 an acre, whereas in Washington it could be done for $2.50. A man is handicapped by the laws all over Alaska.

"The Government ought to extend the homestead and timber laws to Alaska. Under existing conditions the timber lands are at the mercy of the rich, because the benefit of the laws only of benefit to men with money. Something should be done for the benefit of the poorer individual.

"Nome is subject to glacial and volcanic action, and a man with little money has no business there. The ground never thaws to bedrock.

"I am going to head an expedition in April that ought to be very interesting. We will leave Pyramid Harbor for the headquarters of the Tananna and White Rivers, go along the Yukon to Eagle City, and make a thorough examination of the gold and copper sections. We will have about twenty-five men in our party, with fifty horses, fifty mules, plenty of guns, and ammunition. Game is abundant and the black bear is the only animal not protected by the laws. Each man may kill two grizzlies, two moose, four elk, eight deer, and two mountain sheep. The deer are very thick.

"Alaska promises to be a rich field in the near future with better legislation. Its resources are found, the best to be found. Coal is abundant all the way from Southeastern Alaska to the Aleutian Islands, while there is any quantity of petroleum of much better quality than has been found in Texas or California.

"While the total population of American Alaska is only about 55,000, including Indians, I should be in favor of creating three Territories there with the respective capitals at Juneau, Nome, and Valdez.

"But before anything else is done there must be legislation to improve conditions."

SOUTH NEED NOT FEAR BLACKS.

Assurance of Bishop Smith, Who Says His People Never Petitioned the President for Social Recognition.

Special to The New York Times.

NEW ORLEANS, Jan. 31.—On the eve of his departure for Cuba, where he is to open the first conference on that island of the African Methodist Episcopal Church, Bishop C. S. Smith spoke last night in St. James's Church, and touched on the sensational speech attributed to James H. Hayes, in Washington, a few days since. Bishop Smith said in part:

"It is unfair and cruel to hold the masses of negroes responsible for the ravings of Hayes. We are no more responsible for the utterances than are the entire white people in this country for the ravings of Mary Mott and Emma Goldman. We ask that our whole people be not made to suffer for the sins of an individual.

"The President of the United States has erred in that he has done things without involving either directly or indirectly the innocent millions of my people. We have not petitioned the President to invite any one to his public functions or to his private table. With that we have nothing to do. We are satisfied to dwell in our homes, eat at our own tables, and enjoy our own society.

"Even the new South has no need to fear that the negro, whether old or young, will resort to wholesale deeds of violence to avenge either fancied or real wrongs. Now, as in the past, we submit our cause to the arbitrament of an eternal and just God, and to the Christian consciences of the intelligent and dominant people of the South."

NEW RAILWAY FOR CHINA.

British-Belgian Syndicate Obtains a Concession for a Line from Hankow to Chin Tu.

Special to The New York Times.

TACOMA, Washington, Jan. 31.—The steamship Victoria brings news from Shanghai that several prominent Chinese officials, on behalf of the British and Belgian syndicate, have obtained a concession for a line of railway from Chin Tu, the capital of Sz-Chuan, to Hankow, where connection will be made with the Hankow-Canton line, to be built by American capital.

Liu Chubeku, the chief concessionaire, is reported to have presented to the Dowager Empress 600,000 taels and to have received in return high official rank.

The proposed line will parallel the Yangtze River in a general way, but keeping away from the river in many places to avoid engineering difficulties. The natives do not take kindly to the idea, as such a line will divert a large part of the traffic now dependent on the great river.

It is announced in Shanghai that the British-Belgian syndicate will advance 30,000,000 taels for construction purposes, together with 3,000,000 taels for expenses of preliminaries and promotion. The syndicate desires to anticipate the French railway constructors by building another line connecting Burmah and Yun Nan. Newspapers in Peking report that Sir Ernest Satow's visit to England is in connection with these railway concessions.

COPPER PROCESS DECISION.

Owners of Patent Not Entitled to Damages for Alleged Infringement, Says Montana Court.

Special to The New York Times.

HELENA, Montana, Jan. 31.—Judge Knowles decided in the United States Court to-day that the Manhes process of converting copper mined into commercial copper was merely the bessemer process of converting iron into steel applied to copper, that for that reason the owners of the patent were entitled to no damages from the Boston and Montana Mining Company for alleged infringement on patent.

Practically all the copper mined in the United States is converted by the so-called Manhes process, and for that reason the decision of Judge Knowles is of vast importance. Franklin Farrell and the late Achilles F. Midgeon, to whom the process had been assigned by Manhes, who patented it in 1892, claimed a royalty of $2 a ton on each ton of matter converted by that method. As all the copper mined in the United States since 1892, when the patent was taken out, is indirectly involved, the amount of damages that might have been claimed would approximate more than $2,000,000.

OBJECT TO A MARCONI PLANT.

Special to The New York Times.

MONTREAL, Jan. 31.—The authorities of McGill University have written to the Mayor and Council of Montreal to protest against the proposed establishment of a Marconi wireless telegraph plant on Mount Royal.

The letter says that the top of Mount Royal is only seven hundred yards in a straight line from the physical laboratory of McGill, and the establishment of the wireless plant would seriously impair the usefulness of the laboratories, preventing the university from effectively carrying on the important investigations which have been carried on for years.

It is also stated that the operation of such a station at Montreal or its vicinity would increase the danger of fires arising from defective insulation of electric wires all over the city and therefore increase insurance rates.

HORSE KICKED AND MANY DIED.

Animal Broke a Gas Meter and Eleven Horses Were Suffocated.

Special to The New York Times.

CHICAGO, Jan. 31.—A white horse kicked a hole in a gas meter in Abe Klee & Brothers' boarding stable on Milwaukee Avenue last night. When the employes unlocked the door this morning they found eleven horses dead.

The fumes of the gas were so strong that it was a long time before it was possible to enter the barn and take out the bodies. The white horse had been in the stable for some weeks. No one had noticed that its conduct was bad.

FUGITIVE HIDING IN JAPAN.

William A. Wilson, Who Fled from Manila, May Soon Be Caught.

WASHINGTON, Jan. 31.—Information has reached the War Department that William A. Wilson, once disbursing officer of the Bureau of Coast Guard and Transportation at Manila, has been traced to Japan and is now supposed to be in hiding in the interior of that country.

Mr. Wilson disappeared from Manila about Jan. 1 last year, and an examination of his accounts is said to show a discrepancy of about $8,000. He is a native of New York and was appointed to the Manila office in April, 1901.

The authorities at Manila are of opinion that his apprehension is only a question of time.

EXAMINATION PAPERS STOLEN.

Regents' Questions Taken from a Box at a High School.

Special to The New York Times.

COOPERSTOWN, N. Y., Jan. 31.—Somebody stole the box of regents' examination papers from the high school building at Unadilla, this county, this week and placed the faculty in a most embarrassing position.

The papers were received from Albany in a sealed box and carefully locked up by Prof. Barnes of the school. When he went to distribute them to the pupils he could not find them. He telegraphed to Albany and a representative of the regents came to investigate.

A New Kind of Orchid.

Special to The New York Times.

BOSTON, Jan. 31.—What was declared by orchid experts to be the most remarkable plant of the kind ever exhibited in Horticultural Hall was shown there to-day by George Melvin, gardener for Col. Charles Pfaff of South Framingham. It was a single plant of the Oncidum unguiculatum, which had two spikes, each six feet long, bearing flowers in perfect bloom. On one of the spikes were fifty-six blossoms and on the other fifty-eight, making a total of 114 blossoms on the single orchid, which was grown in an eight-inch pan. The award of a silver medal was made by the Plant Committee for the exhibit. The plant was so far ahead of anything of the kind ever seen here that it received the highest award ever given for orchid culture, the silver medal for superior cultivation.

Princeton Game Protectors.

Special to The New York Times.

PRINCETON, N. J., Jan. 31.—Ex-President Grover Cleveland has been elected First Vice President of the Princeton Fish and Game Protective Association, and Prof. Ulric Dahlgren has been made President of the organization. The other Vice Presidents are Dr. Henry Van Dyke, M. Taylor Pyne, and Prof. William Libbey. The Secretary and Treasurer is H. L. Robinson.

Instructor at Williams College.

Special to The New York Times.

TROY, Jan. 31.—Clement Geisner, at present a teacher in a New York high school, has been appointed instructor in German in Williams College. He was graduated at Williams in 1896. After studying two years abroad, he taught two years in Cushing Academy and two at Hobart College.

CANADIAN RAILROAD ABSORBED.

Great Northern Purchased by the Canadian Northern—Grand Trunk May Purchase Both Lines.

Special to The New York Times.

MONTREAL, Jan. 31.—The Canadian Northern Railroad to-day bought the Great Northern Railway of Canada, thus acquiring an important link in the proposed transcontinental line which the Mackenzie and Mann interests are said to be contemplating.

The Great Northern was completed and equipped for traffic in November, 1900. It has a line 225 miles in length and with its connections follows a line almost as direct as the crow flies from Parry Sound, the best harbor on Georgian Bay, to Quebec. It has largely affected the grain-carrying trade from the Great Lakes to the European markets. The route is 800 miles shorter to Liverpool than from Duluth by way of Buffalo and New York.

A branch of the Great Northern already reaches Shawinigan Falls, a power only second to Niagara, as a producer of electric force. It also traverses the rich pulp region of Lake St. John, in which millions have been invested by English and American capitalists.

D. D. Mann of MacKenzie & Mann was in the city to-day. He announced that his company would not apply to Parliament for a subsidy for the extension of his road to the Pacific. He believes that the Grand Trunk Pacific people are straining every nerve to prevent the Government from granting any subsidy to the Canadian Northern for this extension, and that they want to obtain his road as part of their proposed trans-continental system because they have discovered that the country north of Lake Winnipeg cannot supply a railway.

This opinion coincides with that of Premier Roblin of Manitoba expressed on Thursday last. The existing lines of the Canadian Northern are heavily mortgaged, and they cannot raise the money for the new roads unless they get a subsidy or a guarantee. Should they fail in either they would practically be forced to sell out to the Grand Trunk Pacific, although they have refused high bids from that company already.

RELIGION IN THE SCHOOLS.

President Faunce of Brown University Says Church Should Not Shift Responsibility of Moral Training.

Special to The New York Times.

BOSTON, Jan. 31.—In the course of an address on the Protestant view of moral education before the Twentieth Century Club to-day, Dr. Faunce, President of Brown University, said: "We must do something to get together. Protestant and Catholic, Agnostic and Jew, we must all insist that that which is fundamental shall not be ignored, but the use of the school for the inculcation of dogmatic theology will be in the end harmful to the Church which so uses them.

"We need fairness and toleration, but the narrowest sectarianism is that of the Secularist. People of one faith should not be taxed for the support of any other religion, and no denomination should be hindered in the exercise of its religion or in the bringing up of its children in its own faith. Nevertheless, the Bible in the schools as literature is to be defended. If the dubious moralities of Olympus are read for their literary value, the fundamental moralities of the Bible should not be excluded.

"How long are we to admit to the schools the religion of Greece and Rome and bar by law the Bible because it is a part of the religion of America?

"If in our fatuous fastidiousness we continue to exclude the Bible our descendants will probably see it restored by the disciples of Herbert Spencer and Thomas Hardison.

"Most of all, we must insist that the Church and the home must not shift upon the school the responsibility of all moral training. When motherless homes and anaemic churches leave to the school the mental and moral training of their children the burden is too great to bear. The school can never replace the Church in its power or the home in its opportunity.

"I would like nothing better than to see, under the auspices of the Twentieth Century Club or the National Educational Association," said Dr. Faunce, "a conference of fifteen such men as Edward Everett Hale, Dr. Patton, and Archbishop Ireland, men who differ in their religious views, yet whose fairness of mind makes them universally respected, to outline a moral code in the schools that should be a modus vivendi, and which would not involve the slightest surrender of the theological ideas of either."

RAID OVER CAPTAIN'S HEAD.

Central Office Men Take Prisoners in Five Raines Law Hotels.

Detectives from the Central Office, armed with warrants from Justice Holbrook in the Court of Special Sessions, went into the East Twenty-second Street precinct early this morning, and over Capt. Fitzpatrick's head raided five Raines law hotels, as alleged disorderly houses all on Third Avenue between Fourteenth Street and Twenty-third Street. They got fifteen prisoners, eight women and seven men. The women were locked up for the night in the East Thirty-fifth Street Station.

Capt. Fitzpatrick would not have anything to say as he saw the prisoners brought into his station house, but he looked glum. He knew nothing about the raids until the detectives brought the prisoners around to his station.

RIFLED NEW YEAR'S MAIL.

More Than 500 Packages Opened by Thief at Toledo.

TOLEDO, Ohio, Jan. 31.—More than 500 mail packages sent to the Post Office here were found buried in a lumber yard here this afternoon. Every envelope had been opened, but money orders and checks to the value of several hundred dollars which could not be used without danger of detection were left undisturbed.

The envelopes were rifled of jewelry, cash, and New Year's gifts.

ALARMED AUDIENCE'S ESCAPE.

Fire Under Association Hall, New Rochelle—Oil-Soaked Paper Found.

NEW ROCHELLE, N. Y., Jan. 31.—In the course of an entertainment in Association Hall last evening fire was discovered in the shoe store of James Gallagher in the ground story. Several women in the audience became excited, but all persons managed to get out safely through a narrow hallway.

The flames were extinguished quickly. The firemen found several shoe boxes that contained tissue paper saturated with oil.

JUSTICE OF THE PEACE ARRESTED

Accusations of a Detective Against Isaac B. Esberg of Perth Amboy.

PERTH AMBOY, N. J., Jan. 31.—Isaac B. Esberg, a Justice of the Peace, is under arrest here on the charges of extortion. He is accused by Detective R. A. Peltier of charging Annie Ubrin $10 for issuing a peace warrant and of taking $12 from Angelo Biancarella. One of the women had charged the other with slander.

Esberg denies the charges. Louis Kemony is under arrest on a charge of securing money under false pretenses, and the report is that he has acknowledged that he collected money from the women for services as interpreter.

Copper Found in North Carolina.

ASHEVILLE, N. C., Jan. 31.—Copper has been discovered on the upper waters of the Big Ivy Creek and large mining enterprises to develop it have been projected. It is understood that representatives of mining capitalists have taken options on several tracts of land on which the find is located.

Olympian Games for St. Louis.

CHICAGO, Jan. 31.—H. J. Furber, Jr., President of the Olympian Games Association, to-day said of the proposed transfer of the games from Chicago to St. Louis in 1904:

"We have as yet received no official notification from Europe, but there is a strong probability that a transfer to St. Louis will be made.

"In taking the position which it has, the Chicago organization has felt that it should not permit local pride or ambition to stand in the way of the success of an undertaking like the Louisiana Purchase Exposition, which, having already received the sanction and support to the extent of $5,000,000, of the United States Government, is now a National enterprise."

BILLIARD PLAYERS READY

Amateur Tournament Starts To-morrow in Hanover Club.

Stark and Conklin Will Open the Championship Contest—Possibility of Some Professional Matches.

The final details for the amateur billiard championship tournament which is to begin at the Hanover Club, Brooklyn, to-morrow night, were arranged last night at a meeting held in the clubhouse. Rules governing in the various contests were drawn up, and part of the schedule was arranged.

Owing to the illness of Edward Gardner, who won the championship in the clubhouse last year, and a slight injury to the hand of Dr. Mial, one of the players who competed in the Amateur Athletic Union's tournament of a year ago, it was thought a postponement of the tournament might be brought about. Gardner, however, appears to be in fairly good condition now, although he has not quite gotten over the effects of an attack of the grip. He played at the Knickerbocker Academy yesterday, and showed that he was in shape to do himself justice.

C. F. Conklin of Chicago and J. Byron Stark are to play in the opening game to-morrow night. The second game, which is to be played on Tuesday afternoon, is to be between Arthur Townsend and Ferdinand Poggenburg. On Tuesday night Wilson P. Foss and Dr. Mial will compete. No further games were arranged for at the meeting.

Of the original entries seven will compete. Probably the most noted player is Wilson P. Foss, who has held the Amateur Athletic Union's billiard championship of the United States for three years. Dr. Mial is an old Knickerbocker Athletic Club player, who had always rendered a good account of himself in tournaments, while C. F. Conklin is a Chicago player who has competed in most of the Amateur Athletic Union's Class A tournaments held at the Knickerbocker Athletic Club. The other entries are J. Byron Stark, Ferdinand Poggenburg, Arthur Townsend, and Edward Gardner. Stark, Poggenburg, and Townsend have played in this city for years, and they competed in the tournament held last year at the Hanover Club.

While the amateurs are busy, the professionals are looking toward Paris for news of the world's championship tournament that begins in the Grand Hotel on Feb. 14. Maurice Daly was the last of the big fellow to leave New York. Daly has always been an ardent promoter of tournaments, both amateur and professional, and anything that would keep up the interest of the sport he was always interested in. Just before sailing Daly promulgated some plans toward bringing back to this country some of the Frenchmen after the tournament was over in Paris. George Slosson also has the same idea, and he is backed by George Wheelock. With these three men desirous of seeing high-class professional play in New York before the Winter season is over, it is more than likely that the Madison Square Garden Concert Hall will be the scene of some excellent matches either in March or April.

One of the latest things that has cropped out in connection with the ever-popular game of pool is that those who play continuously may receive a reward for their constancy. The new scheme is the giving away of coupons to every player who patronizes an open pool game at certain rooms. This is done similar to the manner in which certain tobacco firms issue coupons. The pool player who keeps at the game long enough may at last gather enough coupons together to get him various useful articles. The list issued by one of the rooms states that for 500 one may get a pair of patent leather shoes, for 650 a pair of trousers made to order, for 1,000 an all-wool suit of clothes, for 1,500 a Spring or Winter overcoat, and for 3,000 a solid gold watch. Larger bunches of coupons will draw premiums up to grand pianos.

The New York Amateur Billiard Club has gained a sufficient number of subscribers, and has leased rooms at the corner of Seventy-ninth Street and Columbus Avenue. This scheme was made successful by Albro Aikin of the old Knickerbocker Athletic Club. The new club will use the outfit that formerly was at the Cherry Diamond Clubhouse, where billiards proved one of the most popular of the sports. Among the gentlemen associated with Mr. Aikin in the new organization of the Amateur Billiard Club were David J. Burtis, Dr. W. C. Douglas, Howard A. Colby, Dr. A. B. Miller, Thomas S. Kurtz, Edward O. Presby, and Dr George Heywood.

HARVARD WINS AT HOCKEY.

The intercollegiate hockey match between the sevens of Harvard and Columbia, which was played at the St. Nicholas Rink last evening, resulted in a victory for the former by five goals to one. The score against Columbia would have been much greater but for the fine work of Van Bermuth in goal, who saved time after time when the Harvard forwards appeared to have the net at their mercy. But apart from the work of the Columbia goalkeeper, the display by both teams was below the average even of college hockey.

Several of the players on both sides found difficulty in retaining their equilibrium on skates even when no opponent was near, and every one appeared to be so awesome by nervousness that the majority of the passes were made directly to one of the other side. The few attempts at team play were made by Harvard, yet in each of the half dozen cases in which two men of the same side collided and went down, the impetuous ones wore crimson sweaters.

If the game was rough, it was not of intention, for little ill-feeling was shown, yet more body checking and wild slugging was indulged in than has been seen at the rink this season in a college game.

The roughness began directly after the face-off, and within two minutes Wolff was knocked out in a scrimmage near the Harvard goal, and play had to be stopped for a short time. Upon resuming, Harvard had a little the better of matters, and although neither team work nor good individual play was attempted, the puck was kicked, shoved, and slugged through a succession of scrimmages to the mouth of the Columbia goal, where Souther batted it through. On top of this severe, Columbia had to contend against odds, for Akin was sent to the side immediately afterward for tripping. Nevertheless, the wearers of the blue and white put considerable steam, if not quite so much science, into their game, and during the two minutes of Akin's absence had rather the better of the argument.

But with both teams again at full strength, Harvard again swarmed around the Columbia goal. Three times Van Bermuth cleared cleverly, but at last Lovering picked the puck from a scrimmage, and getting a chance shot hard from the right, Van Bermuth partially saved again, but Souther swept down on him and scored again for Harvard.

Harvard would have added to the score within half a minute later, but for another splendid save by the Columbia goalkeeper, who passed out to Akin. The latter gave the rubber to Hecker, who sent in the first attempt for Columbia, but Litchfield checked the puck Hecker, and for the third minute the Columbia goal was again in danger. Then Akin got away on the right, and, not attempting to dribble too far, sent in a high left, which completely beat the Harvard goalkeeper and lodged in the net.

The Cambridge team quickly retaliated. Lovering scoring on this occasion. Before the end of the half, both Lovering, Foster, and Souther tried again, but in each case Van Bermuth was equal to the call on him and saved cleverly.

The second half had been in progress only one minute when Foster forced the puck through for Harvard from a scrimmage in front of their opponents' goal. Two minutes later, the same player made a short run on the left and passed to Souther, who scored the fifth goal for Harvard.

The remainder of the game consisted of a succession of scrimmages, during which several sticks were broken, and one or two skyscraping lifts by one or the other of the men at point, which threatened the safety of the roof of the building once or twice. Toward the close Columbia took a brace, and Harvard tired a trifle; but although Cooke, who had replaced Wolff in the second half, sent in one good shot, no further scoring resulted. The line-up:

Harvard.	Position.	Columbia.
Litchfield	Goal	Van Bermuth
Carr	Point	Benedict
Clothier	Cover point	H. Duden
Foster	Forward	Akin
Souther	Forward	W. Duden
Lovering	Forward	Hecker
Gaston	Forward	Wolff, Cooke

Goals scored—Souther, (5,) Lovering, Foster and Akin. Referee—Goal Tumbull, New York A. C. Goal Umpires—W. H. Stern, Columbia, and E. Stern, Yale. Time of halves—Twenty minutes.

WRESTLING BOUT A DRAW

Match Between Plening and Jenkins Stopped at Midnight.

Science and Skill Displayed by Both Contestants—Large Crowd in Madison Square Garden.

Tom Jenkins of Cleveland and John Plening of this city, two of the leading wrestling experts in their respective styles, catch-as-catch-can and Graeco-Roman, wrestled for two hours and ten minutes in Madison Square Garden last night, and at midnight, when the police stopped the bout, the referee called the contest a draw.

The men were matched for two out of three falls, mixed style, and as Plening is a Graeco-Roman expert, he chose that style, as he won that right on the toss of a coin. Both men were trained to the hour and were fairly matched as to weight. They certainly gave a very clean exhibition, and for cleverness, endurance, and a total absence of brutality the contest was by far superior to anything of its kind which has been seen in this city.

Jenkins would have gained a fall if catch-as-catch-can rules had governed the first part of the match, but Plening surprised every one by his clever work, offensive and defensive, and, try as he did to the very limit of his ability, Jenkins was unable to gain any advantage over the local man.

Acting Inspector Walsh and Police Captain Miles O'Reilly, who had a large force of police in the garden, stopped the bout at midnight so as to prevent any infraction of the Sunday laws, and while the large assemblage of spectators felt disappointed they filed out of the Garden without any disorder or demonstration of dissatisfaction.

At 9:50 o'clock Jenkins and Plening shook hands, and Referee Bothner cautioned them as to violations of the rules. After a few passes Jenkins secured a neck hold and forced Plening to the mat. There he got a double Nelson on the "Butcher Boy," but the latter broke and sprang to his feet, but Jenkins slammed him back again on the mat with a waist lock. Jenkins then went on the defensive for a little while, but soon broke loose again when Plening attempted a double Nelson.

Jenkins again went on the defensive, and remained so for fully ten minutes. The Cleveland man was perfectly cool, and it was evident that he was permitting Plening to work himself so that he might waste strength in doing so. Jenkins tried three times for a neck hold, but failing, still remained underneath. Plening attempted a double Nelson hold, then a half Nelson, both of which Jenkins broke, and then, after twenty minutes had expired, Jenkins began aggressive tactics, but after he secured a hammer-lock on Plening the latter rolled off the mat, and the men were ordered to move in the centre.

Plening broke a double Nelson and then Jenkins almost had him over on a half Nelson when, by a dexterous movement, Plening got free again. Jenkins, who is used to the catch-as-catch-can style, came very nearly losing on a foul as he twice attempted to secure a crotch hold, but quickly remembered that he had to confine himself to Graeco-Roman holds, all of which are above the waist. After falling with a waist lock and half Nelson combined Jenkins desisted and both men arose to their feet.

They sparred for three minutes for a hold, and Jenkins got one first, sending Plening down with a neck hold. Then he picked up Plening with a body hold and threw him again heavily. Jenkins worked for a hammerlock, but missed it and Plening got on top. He lifted Jenkins with a body hold, but let him fall again without any advantage. Plening got a double Nelson then, but Jenkins threw back his head and broke the hold with ease. Plening forced Jenkins halfway over with a hammerlock, but the latter twisted out of it safely. When they had struggled for one hour they alternated in attack and defense, after which they got to their feet again as the timekeepers announced that seventy-five minutes had expired.

Once more Plening was forced down, but he got to his feet again, although Jenkins retained a body hold, with which he brought Plening to his knees again. For another quarter of an hour Jenkins tried every possible move to gain a good hold, but all to no purpose, and during the following fifteen minutes he remained on the defensive, although whenever he wanted to he easily forced Plening underneath.

The struggle had become monotonous at the end of two hours, and it was evident that neither man was capable of throwing the other in any style of wrestling, and they still were straining every muscle when the police put a stop to the bout at midnight and Referee George Bothner declared the bout a draw.

Preceding the meeting of the big men four bouts of lesser importance were decided. The first of these was at catch-as-catch-can style between "Nick" Elliott of this city and Louis Whistler, the "strong boy" of Brooklyn. Elliott won handily, gaining two straight falls.

Elliott was the aggressor at the beginning, but Whistler forced him to defensive work within a minute. Elliott had no difficulty in breaking from a leg hold, and soon secured a crotch hold on Whistler from which he gained the first fall in 3:20. After a brief interval Elliott went to work and quickly got a quarter Nelson which he improved to a double Nelson on his opponent, and threw him easily in 4:50, winning the match.

A pair of Lilliputian wrestlers, Leonhardt and Kelly of Newark, then went on for a catch-as-catch-can bout. Neither of the lads seemed to be over twelve years of age, but each of them was well drilled in the fine points of the game. Leonhardt won the first fall with a roll to a pinfall, but Kelly won the next with a bar lock and the bout was declared a draw.

In a Graeco-Roman bout, which followed between the heavy-weights, John Kammerer of this city and Gus Holtz of Brooklyn, Kammerer, after losing the first fall, gained the second and third falls, using a hammer lock and a half-Nelson in each instance. The last of the preliminary bouts was also a catch-as-catch-can affair in which Kanetes Idone defeated J. Martin. After Martin had gained one fall with a hammerlock, Idone, a Italian expert speedily threw his opponent twice with a similar hold.

CLOSE FINISH AT POOL.

Burns Wins in a Remarkable Finish in the Brooklyn Tournament.

Weston and Burns were the winners last night in the sweepstakes pool tournament at the Montauk Billiard Academy. Weston beat Wenrick rather easily, 125 to 85; but the second game between Burns and Smith had the most remarkable finish of the entire tournament thus far. The match ran very evenly, although Burns began by knocking all the balls in the first frame. At the end of the sixteenth frame, Burns had 13 to go and Smith only 4. Smith had the first shot, and broke the balls, leaving a very difficult combination. Burns succeeded in pocketing a ball from a hard shot, and then kept going until he ran out his entire 13, winning the match. The scores of the two games:

Weston—24, 12, 16, 18, 7, 0, 9, 19, 4, 2, 13, 0, 0, 7, 2. Total, 125; scratch, 0; high run, 24.

Wenrick—4, 3, 0, 3, 13, 8, 10, 12, 2, 0, 0, 7, 2. Total, 85; scratches, 0; high run, 13.

Burns—12, 7, 10, 8, 1, 16, 2, 2, 0, 13, 1, 14, 2, 0, 11, 13, 13. Total, 125. Scratches, 0. High run, 13.

Smith—0, 7, 4, 0, 14, 0, 13, 12, 14, 0, 14, 1, 13, 1, 4, 10, 3. Total, 121. Scratches, 0. High run, 13.

The standing of players is:

	Won.	Lost.		Won.	Lost.
Stoff	6	0	Rogers	3	4
Weston	4	1	Hamber	3	4
Smith	4	2	Kirkland	4	4
Wenrick	3	2	Burns	4	4
Ward	4	2	Marber	0	4

Schedule of games for this week is: Monday—Sneden vs. Hamber, Stoff vs. Ward; Tuesday—Rogers vs. Sneden, Wenrick vs. Smith; Wednesday—Weston vs. Ward, Stoff vs. Wenrick; Thursday—Smith vs. Kirkland; Rogers vs. Hamber; Friday—Stoff vs. Weston.

NEW YORK FENCERS WON.

Mercury Foot Foil Experts Beat Fencer's Club and Philadelphia Teams.

Special to The New York Times.

PHILADELPHIA, Jan. 31.—Three fencing teams, representing the New York Athletic Club, New York Fencers' Club, and the Philadelphia Fencers' Club, competed in a triangular journey to-night for the E. L. Hawkins trophy, which was won by the New York Athletic Club team, defeating the New York Fencers' Club representatives in the preliminary round by the score of 6 bouts to and the local team in the final round by the score of 5 bouts to 1.

The tourney was conducted under the rules of the Amateur Fencers' League of America, with foils.

The winning club was represented by Dr. Graeme Hammond, William E. Heintz, and Charles Bothner; the New York Fencers' Club by Charles Tatham, Langdon Byrne, and A. Vance Post.

Dr. Hammond of the New York Athletic Club exhibited the best form, and showed fine judgment of distance, both in attack and defense. His parries were superbly timed, and his thrusts were made with unerring aim. Mr. Heintz was the weak spot in the Mercury Foot trio, losing both bouts sacrificed by his team.

The New York teams fenced first, and the winner met the local trio. The New York Athletic Club won both bouts, losing a solitary game in each, owing to the combined weakness of Heintz and the stubborn defense and aggressive work displayed by Ewing of the New York Fencers and Kohler of the local team.

TRIAL CONTESTS.

TENEMENT LAW DEFENDED

Commissioner De Forest Talks of the Work of His Department.

Objects to the Amendments Proposed by Senator Marshall's Bill—Believes Improvements Have Paid.

Commissioner De Forest appeared before the East Side Civic Club at 548 Grand Street last evening to tell of the workings of the Tenement House Department under the new charter. He sounded a note of warning and said that attacks were being made on the foundation of tenement house reform by legislation at Albany. He advised organization and protest against the amendments which it is proposed to make to the law by the bill introduced by Senator Marshall.

"Under the new tenement house law," he said, "500 structures have been put up in the five boroughs and 1,500 old buildings have been altered. There is not a single room which has not more light. The improvements protect the people against disease.

"The construction and alterations of buildings under the new law have proved a good investment for the landlords in most instances. One building was called to my attention in which the landlord made substantial improvements in the sanitary arrangements of his house and raised the rents $1.50 on each tenant. The people were more than satisfied to pay the increased rent for the improvements.

"Since this department has been organized we have had 4,000 complaints. Some landlords have complained about certain orders for changes in buildings, and all these troubles have been charged to the Tenement House law. For the first time in the history of the city a specific department has been charged with improving the conditions in tenement houses.

"The result is that laws which have been ignored for twenty or thirty years are now being enforced, and the landlords complain. Every one knows about the law prohibiting stables in the same lot with a tenement house, which has been in effect for many years, yet one landlord when ordered to remove the nuisance complained bitterly against the new law."

The Commissioner explained how many of the old tenements of the east side were giving way to modern dwellings and said that the sanitary conditions of the old structures were being improved greatly.

"We are face to face with legislation this year which aims at the fundamental principles of the tenement house law," he said. "The tenement house problem is now the most serious situation it has had to meet at Albany. The great bulk of the people who are proposing the radical changes do so for narrow reasons, and are not acting in the interests of the city or the people. Many of these men may be actuated by honest motives, but most of them are desirous of selling building materials or are speculative builders, who want to rush construction to make the money without any idea of helping the city or the tenants.

"I don't say that the tenement house law is perfect, but the best legal talent has been at work on the matter. The persistent attempts to change the tenement house law to take houses for three or four families out of its supervision are striking at the very foundation of tenement house regulation. I am sorry that the tenement house has become so generally abused. It is connected with uncleanliness and bad surroundings, and it would be better if the law applied to multiple dwellings."

The Commissioner told of the difficulties of carrying out all of the provisions of the law with a small staff of Inspectors in so large a city, and asked those present to ask him questions.

The first was why the Tenement House Department allowed servants and janitors to live in the cellars of houses, when the occupancy of cellars was prohibited by law. The Commissioner replied that when it became distinctly unsanitary, was under the control of the Health Department. He said also that it was a question whether the public would sanction a law which would direct how people should be housed in a private dwelling.

In the discussion Commissioner De Forest took the ground that the landlords' interests were not paramount, but that the health and good interests of the city were more to be considered, although he said that under the new law the landlords had found improvements to pay.

"Why is it, then, that the landlords are opposed to the Tenement House Department?" an east side land owner asked. "Is it is good business for them, why are they all against the law?"

Commissioner De Forest replied that he was convinced that the law had been a success, and that the health of the people had been improved, and that they had been given more accommodations in tenements.

"There is another consideration outside of the money making for the landlord," he said. "It is the healthy conditions which make more healthy people."

A questioner wanted to know whether the Tenement House Department was going to wait for complaints before remedying nuisances. The Commissioner replied that arrangements were being made for inspections periodically, and that the question had been discussed fully and would be carried out as soon as the officials of the department could complete the most pressing work which has burdened them.

The question was asked also whether the tenement house law would not congest the old and cheaper tenements because of the inability of the poor people to pay the rents asked in the tenements put up under the new law.

The Commissioner said that the improvements in the rapid transit system and the bridges across the East River would probably solve that problem and give the people a chance to get homes where land is cheaper. A vote of thanks was tendered to the Commissioner for his "entertainment and lecture."

ENGINEER DAVIS'S STORY.

The Version Given by a Policeman—Three More Funerals Held in Plainfield.

ELIZABETH, N. J., Jan. 31.—George W. Young, an officer of the Westfield police, has made the following statement to Prosecutor English, which the latter gave out to-day:

"When I went to the wreck I was going to place Engineer Davis under arrest. The engineer said: 'I expected the light to turn white every minute.' He also said that he left Jersey City eighteen minutes late. He was informed he had a clear track and was told to run into Philadelphia on time. He asked for Sam and was told that he was all right. He said:

"'I mean the fireman.' Some one said he was all right, and Davis replied, 'Thank God for that.'

"'I saw the red light,' went on Engineer Davis, and expected it to turn to white, but it never did turn white.'

"He was conscious, and he was torn open. We put rags around him and bandaged him up.

"This is my first statement. I have not heard a statement of any railroad official. I was taken to the engineer's at the time but myself. He had a pair of buckskin gloves on. He kept asking for Sam. I asked him who Sam was, and he replied: 'He was my fireman.'"

PLAINFIELD, N. J., Jan. 31.—There are still nine victims of Tuesday's wreck on the New Jersey Central Railroad in the Muhlenberg Hospital. It was said at the hospital this morning that all were doing well, and it was hoped that all would recover. Fireman McCarthy of the Philadelphia filer, who was very low for a time, is now improving. The others are also making favorable progress.

The funerals of three more victims of the wreck were held to-day. Services were held this morning at his home for Edgar W. Williams, a New York lawyer, who resided in East North Street, Plainfield. Mr. Williams was thirty years old. He acted as private secretary to Dr. M. K. Carroll of the Porto Rican Commission. He leaves a wife and one child.

Services were held this afternoon for Thomas Adam Cuming, thirty years old, of Putnam Avenue, Plainfield, and Harold W. Tomlinson, thirty-two years old, of Virden Street. Mr. Cuming was in the real estate business in New York City. He leaves a wife and daughter. Mr. Tomlinson leaves a wife and two children. The funeral of Harvey Patterson of Dunellen will take place to-morrow. Sermons on the disaster will be preached in most of the churches here to-morrow.

Sultan of Maciu Is Dead.

MANILA, Jan. 31.—The Sultan of Maciu is dead from cholera. He resisted the entry of the American troops into Lauao and was defeated at Maciu.

CORN EXCHANGE BANK'S FIFTIETH BIRTHDAY.

Many Bankers Attend the Institution's Dinner—$50 Gold Pieces for Employes.

The officers and Trustees of the Corn Exchange Bank celebrated the fiftieth anniversary of the foundation of the bank with a banquet at Sherry's last night, and by presenting to every employe of the institution yesterday morning a corncob in which was a fifty-dollar gold piece.

President William A. Nash presided at the banquet, which was largely attended by banking men. At the guests' table with the President were Joseph C. Hendrix, the Rev. Dr. Donald Sage Mackay, Frederick D. Kilburn, W. A. Davis, John S. Wise, F. T. Martin, S. W. Marlor, Hirman R. Smith, S. M. Griswold, R. Delafield, J. T. Gwathmey, Stephen Baker, Rudolph Keppler, H. W. Cannon, James Stillman, B. Fielding, T. T. Baer, E. Burgess, D. Bingham, William Sherer, P. B. O'Sullivan, C. H. Fancher, the Rev. Dr. E. M. Stires, Lawrence Dillingham, DeW. C. Falls, the Rev. Dr. A. H. Vinton, A. C. Judson, and A. Williams. The menu of the dinner was as follows:

Huîtres.
Potage Ambassadeur.
Olives. Radis. Céleri. Amandes.
Aiguillettes de Bass Rayée Diplomate.
Selle d'Agneau Richelieu.
Jambon de Virginie aux Epinards.
Canard Canvasback.
Hominy. Céleri Mayonnaise.
Glace Fantaisie.
Gateaux. Fromage.
Fruit.
Café.
Vins.
Laubenheimer. Romanee 1881.
G. H. Mumm's Selected Brut, '92. Apollinaris.

President Nash reviewed the history of the bank, asserting that the institution had made two contributions to banking, the loaning of money on warehouse receipts or bills of lading, and the principle of branch banking. He concluded as follows:

"During the past two or three months much of the old-time reverence for bankers has revived under the stimulus of high rates. On entering our offices the borrower has removed his hat and left his half-smoked cigar, some resting place outside of the office. Of course with the return of easy money we all expect to see them enter full-helmeted and puffing away in blissful forgetfulness of the days when money was high. The great competition in banking accounts for the decay of the prestige of bank officers."

Others who spoke were Joseph C. Hendrix, the Rev. Dr. Mackay, F. D. Kilburn, W. A. Avis, and John S. Wise.

CLASH OF MINERS' INTERESTS.

John Mitchell's Testimony for Anthracite Men Quoted Against the Bituminous Men, Who Want More Pay.

INDIANAPOLIS, Jan. 31.—At the open session of the bituminous coal miners and operators' joint wage conference to-day the Scale Committee made a formal report, setting forth that on the preliminary vote yesterday the operators voted unanimously not to grant the increase in wages or changes in standards of mining that were demanded by the miners.

Several operators addressed the conference, giving reasons why the increase demanded should not be granted. Testimony given before the Strike Commission was quoted by the speakers to show that the conditions in the bituminous fields are better than those in the anthracite fields.

President Mitchell's testimony was repeated as proof of this argument. Mr. Mitchell replied that while he had said that the bituminous miners were faring better than the anthracite men, his testimony could not be made to apply generally, nor could it be shown that the average pay per capita was much better than that in the hard coal mines.

The entire matter was referred back to the Scale Committee, which will meet Monday morning.

GAS STOCK HOLDERS SUE.

Charge That Directors of Four Boston Companies Have Fraudulently Withheld Dividends.

BOSTON, Jan. 31.—Joseph B. Doherty and Thomas J. Egan, in behalf of themselves and other stockholders of the Bay State Gas Company of Delaware, brought a bill in equity in the Superior Court today against the Mercantile Trust Company of New York and others, with a view of having the four Boston gas companies ordered to meet the sinking fund requirements and interest on the United Gas bonds and turn over the excess to the Bay State Gas Company of Delaware.

Damages were placed at $10,000,000, and the writ for that amount was the largest ever issued in this State. It was given to Deputy Sheriff Kelly to serve, but later counsel concluded to abandon that course, and took out a subpoena that will be served on the parties.

The plaintiffs allege that the Directors of the Boston, South Boston, Roxbury, and Bay State Gas Companies of Massachusetts have withheld fraudulently dividends and profits earned by the companies which should have been paid to satisfy the sinking fund requirements and interests on the United Gas bonds.

The bill will be heard next Tuesday before Judge Richardson. Counsel agreed on a hearing at that time, so no order of notice was issued. The case will come up on a prayer for a temporary injunction.

CHICAGO SELLS CHEAP COAL.

Cannot Meet the Demands of Those Eager to Buy Bituminous.

CHICAGO, Jan. 31.—The distribution of bituminous coal at cost price by the city was begun to-day. Hundreds of persons, mainly women, gathered at the City Collector's office, and at the various points of distribution throughout the city, and it was demonstrated early in the day that the estimate of 150 tons a day would prove inadequate to meet the demands.

A hurried consultation resulted in the restricting of the amount sold to each person to one half ton, instead of a ton as originally planned. It is estimated that 1,200 tons would be required to meet the demands of the first day's applicants. The scale of prices ranges from $2.20 to $2.35 per half ton.

"We cannot meet the demand fully," said Commissioner of Public Works Blockl, but with the 300 tons we have daily we can relieve absolute distress. Doubtless we could get an adequate supply if the railroads could deliver it to us."

To Increase United Gas Stock.

PHILADELPHIA, Jan. 31.—The Board of Directors of the United Gas Improvement Company, at its meeting to-day, decided to ask the stockholders of the company to approve an increase in the capital stock of 30 per cent. of the present issued stock, or 160,000 shares, with a par value of $50 a share. The present capital stock of the company amounts to $28,125,000.

COLUMBIA-BARNARD DEBATE.

Proposed Test of the Oratorical Powers of Men and Women.

An innovation in intercollegiate debating is being proposed by the Philolexian Society of Columbia University in the plan to hold a debate with the young women of Barnard College. George H. Butler, Jr., President of Philolexian, is the originator of the plan. And it is his opinion that the debate will be valuable as forming a basis of comparison between the oratorical and argumentative powers of man and woman.

The subject has not been broached to Dean Laura D. Gill of Barnard, whose permission is necessary before the women can enter into any agreement for the contest.

COLUMBIA'S 150TH ANNIVERSARY.

The authorities of Columbia University are considering the subject of celebrating next year the one hundred and fiftieth anniversary of the founding of the institution by the charter granted by King George II. to King's College, in the City of New York.

The University Council has appointed a committee, consisting of Dean J. Howard Van Amring of the college, Dean Robert Simpson Woodward of the School of Pure Science, Prof. Harry Thurston Peck of the Latin department, and Prof. Munroe Smith of the School of Political Science, to report upon the advisability of holding anniversary exercises.

A NEW JEWISH THEATRE

The Grand a Large and Up-to-Date Structure.

To be Opened This Week with a Musical Comedy Entitled "Zion"—City Officials Invited.

The first theatre in New York ever erected expressly and exclusively for foreign-speaking Jewish patronage of the better class will open its doors Thursday night. Other playhouses, such as the Thalia and the People's, not built for the Jews, have been leased, and, as everybody knows, one may hear in these houses plays in Yiddish any day in the week, but the house to be opened Thursday is brand new.

The theatre is called the Grand, and stands a handsome white stone structure—of the Renaissance style now prevailing in playhouses—at the corner of Chrystie and Grand Streets. It was built for and is owned by a stock company (the Grand Theatre Company) of which this business manager is Louis S. Gottlieb.

Within, the theatre is decorated in red and old gold, and provides with its orchestra floor and three balconies for the seating of 1,700 people. The theatre is, therefore, a very large one, so far as seating capacity is concerned, while each floor is provided with lobbies, cloak rooms, and smoking rooms of unusual size—all, like the auditorium, decorated in prevailing tones of red and gold. In spite, too, of the number of seats, the view of the stage from almost any part of the house is good.

The boxes on either side the stage upon the orchestra floor and in the first and second balconies are four in number, and are especially roomy, with a pleasing absence of the dove-cote effect common in proscenium boxes, and the objectionable drapery which too often offends the eye in theatres of much greater pretension. The last gallery also has boxes, but the topmost tier is like those "tea trays in the sky" at the Criterion and some other playhouses on Broadway—a place which affords only a "standing" of the top of the ladies' heads. It is notable, also, that the house is well provided with exits, while the manager claims for it a very perfect system of ventilation. The stage is equipped with a counterbalance system of weights running in cylinders—a labor-saving device for lifting and shifting scenery, which the stage manager says is not used elsewhere in New York.

Mr. Gottlieb said yesterday that the purpose of his company was to furnish dramatic entertainment for the better class of east side Jews, who, he said, find it easier to listen to plays in "Jewish-German" as he expressed it, or Yiddish, than to plays in English. The entertainments he will offer will not differ greatly from those at the Thalia, but he designs to provide a sort of family theatre, to which men who do not go to the Bowery theatres will patronize. For his opening Thursday night the bill is a musical comedy with a name to the Gentile mind hardly suggestive of comedy, "Zion." The play is called, and deals, by all accounts, with the Babylonian captivity and wanderings of certain persons Jerusalemward. The piece was written for the Grand Theatre Company by Joseph Lateiner, and the music is the composition of Louis Heidsieck.

Mr. Gottlieb expects to make his opening a great event on the lower east side. Among the guests of the house that night will be the Aldermen and Assemblymen from that quarter of the city, and Mayor Low also has been invited to attend.

'MARY MAGDALENE' SUPPRESSED

BERLIN, Jan. 31.—Theatrical circles here are excited by the action of the Public Censor of Berlin in forbidding the production of Paul Heyse's "Mary Magdalene" upon the ground that it is founded on a biblical subject.

At a meeting of university professors held at Kiel indignation at the Censor's action was expressed.

WOMAN 'CELLO PLAYER BARRED.

According to information furnished by Arnold Dolmetsch, who is giving in New York lecture-concerts of old music, the Musical Union of this city declares that a woman cannot play a 'cello, and therefore has forbidden Sam Franko to play with Mr. Dolmetsch in case Mabel Johnston, his assistant, plays.

The point was raised previous to the orchestral concert which Mr. Franko gave last Tuesday at Daly's. The music rendered treated of the eighteenth century, and therefore Mr. Dolmetsch was invited to take part. The latter thought that he would use his usual assistants, Mrs. Elodie Dolmetsch and Miss Mabel Johnston. Miss Johnston plays the viola di gamba.

But the union informed Mr. Franko that Miss Johnston could not play with him, since this viola resembled a 'cello, and, according to its laws, no union member could play with a woman who played this instrument. Miss Johnston did not play.

Arnold Dolmetsch will give a lecture-concert of old music at Association Hall, Brooklyn, to-morrow night.

STORMY POOLROOM SUIT.

NEWARK, N. J., Jan. 31.—Herbert W. Knight, special examiner of the Supreme Court heard testimony to-day in an action brought by Edward L. J. Looney of New York to have set aside an order of arrest issued against him because he had failed to satisfy a judgment of $900 obtained against him by James McGarrigle, a coachman, of Morristown. McGarrigle, a coachman, advanced the money, he claimed, to be put in a drug store. Looney claims he advanced it to be put in a poolroom run by John P. Collins; that the place proved a failure, as it was closed by the authorities, and that McGarrigle then "squealed" and brought suit.

When Looney failed to satisfy a judgment that McGarrigle had obtained for the amount he had him arrested, charged with obtaining money under false pretenses. Looney furnished bail and then applied to Justice Garretson for an order to show cause why the order of arrest should not be set aside. It was on this that testimony was taken to-day.

William P. Burns, a telegraph operator, testified that he had worked in a poolroom in Warren Street, New York, which was run by Mr. Collins, and that McGarrigle was continually there.

Collins testified that he had run a poolroom on Hudson Street and that when he was forced to change the location to Warren Street through Jerome's activity, he wanted a partner with $1,000 capital to invest. He told Looney and the latter subsequently introduced McGarrigle, who, he said, put up the required amount, and knew he was putting it into a poolroom.

When Looney took the stand he declared that Elmer King, counsel for McGirrigle, had a grudge against him. Looney, and was working it out by taking McGarrigle's case. King admitted he had a grudge against Looney, but said it was because he had robbed his mother-in-law of $4,500.

"You're a liar!" shouted Looney, "and you know it. If you repeat at Morristown what you have said about me, it will be the last time you will ever say it."

Examiner Knight had much difficulty in keeping order while the hearing was going on. It was not concluded.

Secretary of St. Peter's Killed.

ROME, Jan. 31.—Mgn. Felix de Neckere, Secretary of St. Peter's, fell down the stairs of his residence to-day, fractured his skull, and died on the spot. Mgr. de Neckere was Secretary of the Congregation for the Fabric of St. Peter's. This congregation was founded to have charge and take care of the administration and preservation of St. Peter's and matters relating to pious bequests, &c. The Prefect of the congregation is Marianus, Cardinal Rampolla del Tindaro.

The Francis H. Leggett Launched.

Special to The New York Times.

NEWPORT NEWS, Va., Jan. 31.—The lumber steamship Francis H. Leggitt was launched at the shipyard to-day at 11 o'clock. The vessel is being built for the Hammond Lumber Company of San Francisco, Cal., and will ply in the redwood lumber trade along the California coast. Mrs. Archer M. Huntingdon, daughter of the President of the company, was the sponsor and broke a bottle of wine upon the prow of the vessel. On the ways vacated by the Leggitt the keel for the battleship Louisiana, sister ship of the Connecticut, will be laid in a few days.

NEW YORK CENTRAL CHANGES.

John Carstensen and William J. Wilgus Made Fourth and Fifth Vice Presidents of the Road.

By the creation of two new Vice Presidencies, announced yesterday, an important change has been made in the organization of the New York Central Railroad. Heretofore the men who have now been created Vice Presidents were under the jurisdiction not of the President of the company direct, but of officials subordinate to him. Under the new arrangement these newly appointed Vice Presidents will not only report to the President direct, but they will have a much wider sphere of authority, consequently of responsibility, and incidentally of credit for achievements. This system is practically the same as that which has been in use on the Pennsylvania Railroad with great success for several years.

The changes were made at a meeting of the Board of Directors held yesterday, and will go into effect to-day. The changes are as follows:

John Carstensen has been appointed Fourth Vice President, with offices in this city, to have general supervision of the accounting department and such other powers and duties as may from time to time be assigned to him by the President, subject to the approval of the Board of Directors or of the Executive Committee. Mr. Carstensen was born in 1854 in this city. He was educated at the Cayuga Lake Academy and at the Alexander Military Institute at White Plains. In 1871 he entered the employ of the New York Central as an office boy. He gradually worked his way up until some years ago he was appointed Controller. This position of Controller has been abolished and Marshall L. Bacon has been appointed Auditor, with office in this city. He will have supervision of disbursement, freight, passenger, and general accounts.

Another appointment, and which is considered by railway men of greater importance to the future of the New York Central, is that of William J. Wilgus as Fifth Vice President, with offices in this city, to have, under the direction of the President, general charge and supervision of all construction work; to assist the Third Vice President in matters pertaining to maintenance of way and structures, and to perform such other duties as may be assigned to him from time to time by the President, subject to the approval of the Board of Directors or of the Executive Committee.

Mr. Wilgus has heretofore been Chief Engineer of the road. He was born in 1865 in Buffalo. He was graduated from the Buffalo High School and took up a course in civil engineering at Buffalo and a correspondence course at Cornell University. He entered railway service in 1885 as a rodman and draughtsman. His advancement was rapid.

After varied experiences in the field he became in 1890 Division Engineer of the Chicago, St. Paul and Kansas City, but in 1891 he took up the study of electrical appliances and apparatus in Chicago. He was then resident engineer in charge of construction of the Union Terminal Railway in Chicago. In 1893 he went to the Rome, Watertown and Ogdensburg, of the New York Central system, and in 1897 he was brought to this city as resident engineer of the parent road. After that he was gradually advanced until in 1899 he became Chief Engineer.

ATTACK ON ROCK ISLAND.

Action Brought in Chicago Denying the Validity of the Reorganization and Charging Fraud.

CHICAGO, Jan. 31.—A bill in equity was filed here to-day in the State Circuit Court, by C. H. Venner & Co. of Boston, through their counsel, James Hamilton Lewis, against the Chicago, Rock Island and Pacific Railway Company of Illinois, the Rock Island Railroad Company of Iowa, the Rock Island Company of New Jersey, the Central Trust Company of New York, and the officers, Directors, and prominent stockholders of those companies, including William H. and James H. Moore, William B. Leeds, Daniel G. Reid, H. C. Frick, Marshall Field, Ogden Mills, and others.

The bill attacks the validity of the late reorganization of the Rock Island Railway system and the legality of the issue of $75,000,000 of the new stock. It demands that the Iowa and New Jersey companies of the consolidation be declared "frauds" as created in violation of the Illinois Constitution, and that the Central Trust Company, the holders of the stock and bonds of the consolidated roads, be enjoined from voting the stock or acting as trustees in Illinois; also that the officers be declared guilty of a fraud on the minority of the stockholders and a receiver be appointed for the stock properties.

Venner & Co., who bring the action, say they represent a majority of the dissenting stockholders. About $300,000 is represented in the bill. There has been, it is said, some bad feeling among certain stockholders of the system since the reorganization was effected last July.

"BIG FOUR" DEFENDS ITS RATES.

Declares That Recent Increases Are Based on Business Conditions.

WASHINGTON, Jan. 31.—The Cleveland, Cincinnati, Chicago and St. Louis Railroad has filed with the Inter-Stte Commerce Commission a statement alleging that its recent increases in freight rates on grain, grain products, dressed meats, and provisions are reasonable and just and based on existing business conditions and the present increased cost of transportation.

The railroad says that the rates were fixed without agreement or combination with any other carrier, were not based on permanent improvements, and that it has made no rebates or concessions since May 1 last.

Susquehanna and Western Official.

Henry E. Gilpin has been appointed General Superintendent of the New York, Susquehanna and Western Railroad, which is controlled by the Erie Railroad. Mr. Gilpin will have headquarters in Jersey City. He was heretofore General Superintendent of the Ohio Division of the Erie Railroad and of the Chicago and Erie Railroad. His successor in this position will be John C. Stuart.

SPANISH-SPEAKING JEWS.

Three Families from Roumania Arrive at Ellis Island.

Three Jewish families from Roumania, speaking only Spanish, were landed yesterday at Ellis Island. Three men, Moritz Kaufman, Moremo Haraver, and Minachen Alsas, were brought before Allan Robinson, Commissioner Williams's secretary, and Interpreter Ephraim Navon, who is descended from Spanish Jews, explained the case.

The families, he said, were the descendants of Jews who had been driven out of Spain in the reign of Ferdinand and Isabella, and, settling first in Turkey, emigrated later to Bulgaria and Roumania. For 500 years they have spoken only the Spanish language, and they have kept up Spanish customs.

Civil Service Examinations.

Competitive examinations for a chemist of the sixth grade will be held by the Civil Service Commission on Thursday, Feb. 19, and for a stenographer and book typewriter of the second grade on Friday, Feb. 20. The receipts of applications for both positions must be in by Monday, Feb. 16, at 4 o'clock in the afternoon. The compensation for chemist is $1,800 per annum, and for the stenographer and book typewriter $900.

Funeral of Charles Titus Thayer.

BUFFALO, Jan. 31.—The body of Charles Titus Thayer, General Superintendent of the National Express Company, who was killed in the railroad accident at Westfield, N. J., was buried here to-day in Forest Lawn. Besides members of the family, J. A. Vickers, General Superintendent of the Western Division of the National Express Company of Chicago, and other company officials were present.

Rev. C. H. Richards's New Office.

The Rev. Charles H. Richards, D. D., of Philadelphia, has been elected Secretary of the Congregational Church Building Society. His acceptance was announced yesterday.

The Value of Simplicity in Furniture

is beautifully shown in our exhibit of "Hampton" Furniture for the Bedroom. Of white enamel, natural birch, or maple, these pieces offer a charming treatment where cheerfulness blended with simplicity, is desired.

The low twin Beds, the Dressing Bureaus, Chiffoniers, Toilet Tables and Chairs—are all in harmony in this conception.

POLO HERE AND ABROAD

First Big English Tournament to be Under American Rules.

What the Hurlingham Club Has Done for the Game—George Gould Buys More Polo Ponies.

Polo, as well as golf, begins in England much earlier in the year than in America, and this fact has been brought into prominence recently by the announcement of some of the season's important polo tournaments by the leading English clubs. The Hurlingham Club will give its opening tournament on April 28, the events continuing through to May 2. To American players the results of this event will be watched with considerable interest, because the American rules are to be observed in the various competitions. This is in accordance with the policy decided upon two months ago at an informal polo meeting in London brought about by William A. Hazard, the Secretary of the American Polo Association, who has been agitating with considerable success a uniform standard of rules in polo for both countries. Mr. Hazard promised, in so far as he was able, that a tournament would be played in this country under the English rules. The Chairman of the association, H. L. Herbert, is heartily in favor of the idea, and definite plans will be made at the coming annual meeting of the association, which will be held in April at the Metropolitan Club.

The annual Oxford-Cambridge polo contest will be played on the Hurlingham field on June 22, and the Hurlingham championship cup tournament has been fixed for June 8 to 13. The Ranelagh Polo Club, which is also one of the active centres of the sport in Great Britain, will open its tournament season on May 2, and a large number of club and inter-club games has been arranged for that month as well as for June and a portion of July. Rugby and Roehampton will also give the usual number of events.

The tournament to be played here under the English rules will be held on the Georgian Court field of the Lakewood Polo Club, and the date will be fixed at the coming annual meeting, and it is generally understood that the event will be one of the early competitions. It will be the first time in this country that the Polo Association has given an event strictly under the English rules, but the purpose of this international courtesy in testing the rules of each other's country is to give the players practical knowledge of the different systems, and the result may occasion certain modifications which may bring about a uniform standard. Mr. Hazard will not return to America until next month, and he will probably have some interesting statements to make to the Polo Association regarding his conferences with the English players. He is also trying to have an English team visit this country early in the season, but nothing definite has been arranged as yet, although his letters to Mr. Herbert on this subject are very encouraging. A number of the best English players would like to come, but the difficulty is in fixing a suitable time for enough good players to come together and there is reluctance on the part of some of the polo men in bringing over their best horses for a comparatively short time.

In the absence of a polo association in Great Britain, the Hurlingham Club acts as the arbiter of the sport. In this respect it holds the same relation to the polo world of the United Kingdom as the St. Andrews Golf Club does in the sport of the links. From time to time there have been criticisms of this one club rule in both cases, but as the rulings of each club have been established through the instrumentality of men who are acknowledged as leaders in the respective sports, their edicts have usually been accepted as beneficial. The authority that each of these clubs wields in its special domain is well illustrated this year, for changes in rules are being made in both polo and golf. The St. Andrews rules have already been announced, and the chief changes will be embodied in the American code.

POLO CHANGES IN ENGLAND.

A number of minor changes have been called for in polo, and the agitation for a uniform international system has brought the subject into greater prominence in England than it has had for several years. The foreign players admit that the recent contest with the American team has revealed points that it will be well to change in the English system. It is barely possible before international uniformity is reached that each country may adopt some of the rulings of the other, thus coming to a compromise on the disputed points.

The Hurlingham Polo Committee has brought about many desirable reforms in the game within the last half dozen years. One of these, the fixing of the game at six ten-minute periods, instead of four fifteen-minute periods, as is the case here, has been highly commended by many American players who have played on English fields. In the ten-minute period no stoppages are allowed, unless, of course, a foul is called, but it is understood that the ponies are to be used through the period without change. In a fifteen-minute period here, many changes are often made, so that a fifteen-minute period will often be stretched to twenty or twenty-five minutes. There has been a long rumor that John E. Cowdin, one of Rockaway's star players and new of the Lakewood Club, has expressed his high appreciation of the English system in the division of periods.

Other improvements made by the Hurlingham committee are in defining more accurately the rule for crossing, in insisting upon the official measurement and registration of ponies which are not allowed to play until they have reached 14.2 hands, in altering the penalty for a foul, which is now a hit-out from between the goal posts, the defending players being free to place themselves where they please, and the attacking side not to approach within twenty-five yards. The Englishmen, however, admit that this rule, as well as the one defining the penalty for deliberate hitting behind, needs further amendment. Lawrence Waterbury, in some of the international games last June, showed that a side which may have been in danger really gains in hitting behind, the advantage of turning defense into attack, and so getting to the ball on the gallop against opponents who may be standing still. The result can hardly be called a penalty. It has been pointed out, however, that the new penalty, whatever it may be, should not be exacted if the ball goes behind from another player or pony. Other small points, including directions to the umpire, are also under consideration.

Several new polo ponies will be used by George J. Gould and his sons this season in their Lakewood games. Mr. Gould now possesses one of the largest stables of polo ponies in the country, among them being several that are valued close to $1,000 apiece. He has just purchased eight more in Texas, and they were shipped last week to Lakewood. The ponies were bought from Harry Tappan, who has a large ranch several miles from Austin, and he has supplied many other polo players with some of their best mounts. All of the ponies have been well trained for months to polo, particular attention being paid to quick turning and stopping abruptly. They will be used in several preliminary practice games at Lakewood previous to the regular Spring tournament.

Big Bark Ashore Awhile in the Bay.

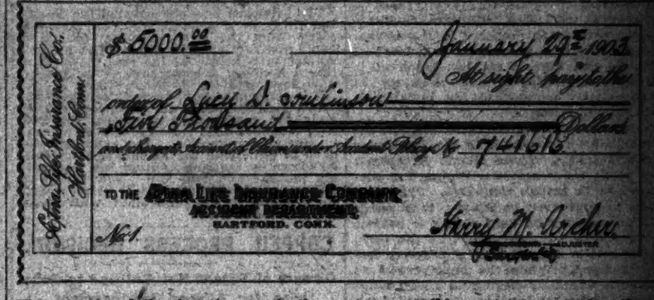
The big British bark Dunfermline, bound for Shanghai, when proceeding to sea on Friday night in tow of the tug McCalden Brothers grounded on the west bank in the lower bay. She was hauled off yesterday by the wrecking tug I. J. Merritt and towed back to Clifton, S. I. The vessel is supposed to have sustained no damage, but she is to be examined before she proceeds to sea.

JERSEY CENTRAL RAILROAD ACCIDENT

Practical Demonstration of the Benefit of Accident Insurance by the

ÆTNA LIFE INSURANCE COMPANY, HARTFORD, CONN.

The largest company in the world writing Life, Accident, Health, and Liability Insurance.



The morning following the wreck the newspapers did not enumerate Mr. Tomlinson among the unfortunate victims, but the following day—the 29th inst.—when his name appeared in the death list, and the ÆTNA ascertained the facts, it VOLUNTARILY, without waiting for notice from the family, tendered the bereaved widow the above draft, with their sincere sympathy.

The Contract was an

ÆTNA TWENTIETH CENTURY COMBINATION ACCIDENT POLICY, written for Twenty-five Hundred Dollars, and giving

DOUBLE THE SPECIFIED SUM FOR RAILROAD, BOAT, TROLLEY, ELEVATOR, BICYCLE, AND BURNING BUILDING ACCIDENTS. The premium paid was $12.50.

Dinner of the Society of the Genesee.

The Society of the Genesee will have its fifth annual dinner on Saturday evening next in the Waldorf-Astoria. The speakers are to be George L. Rives, who, in response to the toast "The City of New York," will defend the present administration; George Von Skal, editor of the New Yorker Staats-Zeitung, who will refer to the Venezuelan incident; John Kendrick Bangs, Julien T. Davies, Dr. Rush Rhees of the University of Rochester, and Clinton Mayo.

AUTOMOBILE TOPICS OF INTEREST.

An Interesting Series of Motor Vehicles Representing Twelve Years of Actual Construction—Illustrated by an Exhibitor at the Recent Show.

A most interesting showing was made at the recent Automobile Show in the Madison Square Garden by a Reading manufacturer, one of the pioneers in the business, who distributed a booklet containing illustrations and descriptions of twelve vehicles, representing twelve years of actual work in automobile building. Lack of space prevented the exhibition of the vehicles themselves, which would have made a most interesting historical exhibit, and only one of the most recent models was actually upon exhibition.

This manufacturer selected the internal combustion motor for vehicle use in 1888 and began experimenting. Actual work was begun in 1891 and has been carried on continuously ever since. The first vehicle, begun in 1892 and finished in 1892, was similar in appearance to the ordinary horse buggy with a motor and gearing attached and carried in sight under the body. It had a buggy dash and folding top, with high wooden wheels with iron tires. A single cylinder motor of one and one-half to two and one-half horse power drove a variable speed friction device, as on some vehicles to-day. The power was transmitted to the rear wheels by a counter shaft with double chains and sprockets, the latter being attached to the spokes of the wheels in the manner now commonly employed in motor bicycles. A governor regulated the motor so that speed changing and steering were the only functions to engage the attention of the operator. The steering device comprised an upright pillar in front of the dashboard, with a transverse tiller extending back toward the seat. A sidewise motion of the tiller steered the vehicle, while an up-and-down motion changed the speed. This is said to be the original of the one-hand-controlling device now quite generally used on light automobiles. A spray mixer with electric ignition was used. Spiked iron tires gave traction in Winter. The weight of the entire vehicle was 650 pounds.

These vehicles saw considerable use, and as a result of the experience gained with them the next model, designed in 1893 and completed in 1894, showed a wide departure from the buggy type. The body was made longer and was placed lower on the axles, lowering the centre of gravity. It was box shape and inclosed most of the machinery. The dash was curved and hollow, giving a space for parcels. The front wheels were smaller than the rear ones, and both had pneumatic tires. The steering pillar was placed back of the dashboard in the carriage, the body of the vehicle being extended beyond the front axle. The rim sprockets on the wheels were replaced by a large sprocket on the live rear axle.

Other features of this model were the one-hand control, double cylinder motor, gear transmission giving three speeds forward and reverse, pump circulation, water tank forward under the floor, exposed to the air, and parcels receptacle in the hollow dash. It further included bevel gear transmission, the motor being placed with crank shaft lengthwise the vehicle. It had a variable governor, acting on the inlet valves, and a means for throttling to a limited extent. The engine was of four-horse power and the weight of the entire vehicle was 1,200 pounds. It won the Chicago Times-Herald race, first prize $2,000, Thanksgiving day, 1895, in fifty-two miles of deep crusted snow, a feat some modern vehicles might not be able to accomplish.

The use of the Chicago winner during 1895 suggested smaller wheels, larger tires, longer base, lower centre of gravity, more power, and a more perfect throttle control. Although built originally with automatic governors, these were removed and throttle control became an established fact. The hollow dash for parcels, the tiller steering, with speed changing by the same lever were prominent features. The water circulation was perfected by abandoning the pump for a large tank at the back of the seat, with gravity circulation to the twin motor packets. Because of foreign practice a first-class gear transmission was abandoned and belt transmission substituted, a distinctly backward step and one subsequently retraced.

Four of these vehicles entered the cosmopolitan race from New York to Irvington, Decoration Day, 1896, and three were the only vehicles to return the same day, winning all prizes. $3,000. Weight, 1,450 pounds; 5 horse power. The buggy top was discarded in this model, and the high upholstered seatback made its appearance, together with mud guards to all wheels.

The carriage built in 1898 resembled that of 1895 in general aspect and construction, but had no reaches, the mechanism and body being carried on angle iron frames and semi-elliptic springs. This feature of an angle iron frame was promptly copied by the foreign makers to whom it was shown (rear view) in the "Liberty Day" run from London to Brighton, England, Nov. 14, 1896. In that event this vehicle took the first, second, and third French race winners by more than an hour in fifty-two miles, which is said to be the only instance of an American gasoline vehicle beating the best foreign vehicles over their own roads.

Another feature of this model was a mechanical generator with speed governor for furnishing the electrical current, a device of recognized superiority to-day. The weight was 1,150 pounds, five horse power. Many of these vehicles are still in service to-day.

A light dos-a-dos runabout of modern type with wire wheels was the model of 1897, marking a further advance toward a light vehicle for family use. The wheels were 30 and 34 inches instead of 34 and 38 inches, as formerly used. It also had an opposed double cylinder engine with gear transmission, giving three speeds forward and reverse, a centrally placed steering post equipped at the top with wheel or crank as desired, and the single controlling lever at the side for throttling the motor and changing the speeds. Corrugated radiating water tanks were built into the sides of the vehicle and a detachable dos-a-dos seat provided carrying capacity for two or three additional passengers. The angle-iron frame without reaches, long semi-elliptic springs, inclined floor, self-oiling chain, long wheel base, and low centre of gravity were additional features. Weight, 900 pounds; 5 horse power.

In 1898 the form of construction which with but minor alterations is employed to-day was adopted, including a balanced triple motor with single water jacket, transmission gear by the side of the flywheel concentric with motor shaft, direct-acting speed governor, self-oiling, noiseless chain, large sprockets and bearings, and one hand central control. A three-wheeler was brought out this year, which is still made, and to which several claims of excellence over the four-wheeler are made. There are also a four-wheeled phaeton, family vehicles to carry from four to ten passengers, surreys and runabouts with or without tops, traps, hansoms, and broughams. The latter are built only to order and are geared either for park use or for touring, as desired.

***

This three-wheeled phaeton just mentioned not only has been a conspicuous exhibit at the three automobile shows which have been held in this city, but has some excellent performances in competition to its credit, which would seem to justify the claim of its excellence made by its makers. With such a vehicle of eight horse power and weighing 800 pounds, the Eagle Rock hill-climbing contest was won on Nov. 5, 1901, and the best American gasoline time made on Nelson's Hill Sept. 8, 1900.

In construction and appearance the three-wheeler is similar to the four-wheeled phaeton, except that there is but one front wheel instead of two. Equal stability with the four-wheeler is claimed, because if the turning gear of the latter is flexible, as usually is the case, and as it must be for use on poor roads, the front end of the vehicle is practically supported by a single pivot, giving it no greater actual stability than the three-wheeler. In addition a number of advantages are claimed for the latter type.

Having only three points of contact on the ground, the three-wheeler is said to be capable of traversing rough roads at speed without rocking and straining the body, and with actually less shock and vibration to the passengers. In many cases two front wheels will strike twice as many obstacles and transmit twice as much vibration to the passengers as a single wheel, which can usually be steered clear. The load on the front of these vehicles is quite light, so that the front tire is not overloaded by carrying the entire amount, while the saving of 25 per cent. of tire troubles is worthy of consideration, as no other feature of the modern automobile gives as much trouble as the tires.

The three-wheeler throws less mud and does not require front mud guards, which are simply added weight, cost, and pieces to clean and climb over in getting in and out of the vehicle; so 90 per cent. of the mud guard nuisance is therefore saved. Having one front track instead of two, fully 15 to 20 per cent. of the road friction is saved, as is evidenced by the fact that these vehicles are faster and more capable than the same vehicles, identically, when equipped with four wheels. A test often made, as the makers frequently convert from one form to the other, it being a very simple operation.

***

It is argued that a four-wheeler makes but two tracks, and therefore runs easier than a three-track vehicle, but on the other hand a four-wheeler gets muddy on all four wheels, and picks up more mud than does a three-wheeler. If the track out by the front wheels could be followed by the rear ones without road friction or the effect of sticky mud there would be something in the argument, but experience has demonstrated that the reverse is true, and it requires decidedly less power to drive a three-wheeler than a four-wheeler. The same argument was used when tricycles were in vogue and two-track machines, both three and four wheelers, were offered, but the final form was the three-track vehicle.

It is also claimed for the three-wheeler that it has less parts, and is therefore more readily kept in repair. It weighs less, is easier to clean, handier to walk around, takes less room in the stable, may be turned in a narrower street, steers easier and with greater certainty, and is generally more satisfactory.

Being narrow in front, it splits through the air instead of under it, so that less current is felt by the riders. The spray of dust and mud from the forward wheel is carried by the wind to one side or the other, whereas with a four wheeler there is always a wheel on the windward side, throwing dirt into the passengers' faces. It is not only said to be more capable in sand, mud, and on hills because of its less resistance, but faster, a machine of this type having developed a speed of 45 miles per hour in England recently without spark advancement or any such refinement.

In the matter of steering, it is said, there is a decided difference, particularly in such roads as are found in the Winter when the front wheels tend to follow ruts in the snow. In such a case the three wheeler may be handled with much greater certainty and ease. Further, a four wheeler tends to skid when one forward wheel strikes an obstruction because the strain on that side of the vehicle holds it back and permits the other side to slew around. It may be said that the centre of the road often is rougher than the wheel tracks, but as one-horse vehicles are more common than two-horse teams, particularly in the country districts, it will be found more frequently that the wheel track, the single horse in the centre of the road is the best portion.

***

One of the principal novelties at the recent Automobile Show was a chainless and gearless motor truck which involves a most radical departure from ordinary types in its construction. The engine is of the internal combustion type, two-cylinder cycle, with separate copper water jackets, giving great water capacity and rapid radiating surface. Diameter of pistons, 5½ inches, 8-inch stroke; speed, 400 revolutions per minute, developing 12 horse power; flywheel 26 inches in diameter. Electric ignition, with break spark, current for which is supplied by batteries carried under the wagon seat. The engine is so designed that it can be run any number of hours consecutively under load without undue heating or loss of efficiency. To insure ease in starting the exhaust valves are held open during part of the compression stroke.

In transmitting the power from the crank pin of the engine to the driving axle of this vehicle, no gears, belts, or chains are employed. A transmission device has been adopted by which the hitherto non-flexible, non-reversible internal combustion engine has been harnessed, and by its use the wagon may be run at any desired speed, forward or backward, up hill and down, stopped or started without in any way altering the speed of the engine or its direction of rotation.

To accomplish this two important elements are employed—one a reversible roller ratchet on the rear axle, and the other a variable throw crank pin in the fly wheel of the engine. In detail, this reversible roller ratchet consists of a hardened tool steel centre keyed to the driving sleeve on the rear axle. This steel centre, which is 4 inches long by 7 inches in diameter, has cut on its periphery 12 longitudinal grooves, ⅜ inch deep by ⅝ inch wide at the base, with sides flaring to a width of 1⅜ inch at the circumference, these sides or bevels being ground to an angle of about 30 degrees, varying with diameter of the steel centre.

These 12 longitudinal grooves, 8 inches long, form seats for 24 hardened tool steel rollers ⅝ inch in diameter by 3¼ inches in length, two rollers lying in each longitudinal groove, end to end, but properly spaced and held in position by a slotted bronze cage or sleeve which surrounds the hardened steel centre and is fitted with 24 slots to receive the rollers.

These slots are the exact length of the rollers, but are wide enough to allow them to move freely and at the same time keep them in alignment. This bronze cage or slotted sleeve fits loosely on the steel centre and is ¼ inch thick, thus allowing the rollers to extend 1-16 inch above and below it. It is connected to the steel centre by two straight keys with a longitudinal spiral feather on each key. The straight keys slide in a keyway cut in the steel centre, while the spiral feather on the key slides in a spiral keyway in the inside of the bronze cage. If then these straight keys be moved in the steel centre, it follows that the spiral feather will cause the bronze cage to advance or recede in accordance with the pitch of the feather and the length of the movement imparted to the straight key.

In practice the cage moves about one-half inch in either direction from the centre, and the function of this movement is to allow the rollers to leave the level neutral plane in the centre of the seat and advance or retreat toward the inclined bevel edge, so that if a rotary movement be given them they will attempt to mount the incline.

Surrounding the rollers are two cast-steel sleeves, or rings, each four inches in width, each having cast on one side an arm, to which may be attached the connecting rods. These sleeves have a hardened tool steel bushing forced into a keyed and ground to proper size to slip easily over the twelve rollers, when they lie in the lowest point in their respective seats on the neutral plane. End plates are bolted on with felt washers to keep out the dust and dirt.

So long as the rollers are confined to the neutral plane by the slotted cage the outside rings or sleeves may be moved freely in either direction of rotation, and if a reciprocating movement be imparted to the arms on these rings, no resistance to free rotation will be noticed, since the hardened steel bushing in the rings running on the steel rollers simply causes them to roll back and forth. If, however, the bronze cage be moved forward or backward by the forcing in of the keys carrying the spiral feather, the twenty-four steel rolls will mount the inclines formed by the bevel or incline, and if then an attempt be made to move the arm or ring surrounding the rollers in a direction toward the incline to which the rollers have been advanced, they instantly wedge, and lock the tool steel ring to the hardened steel centre, thus carrying it and the driving sleeve and axle with them.

The return movement unlocks them instantly, but it is evident that a succession of reciprocating impulses given to this outside ring would cause a complete rotation of the axle, the direction of rotation depending on the position of the rollers relative to the inclines. Each arm has connected to it a suitable rod whereby the reciprocating movement may be transmitted. The two sets of rollers working on the same steel centre are each actuated by a different connecting rod, so that while one of these is pulling the other is being brought into position to push, and hence as this action takes place alternately a turning motion is imparted to the rear axle. In practice, it is observed that, since the reciprocating movement is obtained by equal rods, actuated by the same crank pin, there is a lag or lead of one impulse over the other to such a degree as to make the turning movement of the rear axle constant.

The flywheel is of cast iron, with a cylinder three inches in diameter cast through it. In this cylinder is fitted a brass piston in which is screwed the crankpin. A sliding shoe to prevent the piston from turning and to keep out dirt, a stiff compression spring at one end and a leather cup at the other, with an oil passage through the crank shaft to a small pump running from the side shaft of the engine, complete the device.

Two connecting rods of equal length connect the lower and the upper ratchet arms to the crankpin. If the crankpin be moved off the centre a reciprocating movement is imparted to both connecting rods simultaneously, and the magnitude of the movement or stroke depends upon the radius of the circle described by the travel of the crankpin, or, in other words, the distance the pin was off of centre, the full stroke, which is double that distance, is imparted to the arms of the roller ratchet by the connecting rods, and if the cage be set so that the rolls can engage on either incline, the rear driving axle will be caused to revolve either forward or backward in accordance with the position of the cage.

In operation, the engine is instantly started by a hand ratchet on crank shaft. The engine being under way, the reversible roller ratchet being in its normal go-ahead position, the operator desires to start his wagon, possibly heavily loaded. Having hold of the hand lever he pushes it forward a few inches, when the friction clutch starts the pump, and like a hydraulic jack, the crank pin begins to move off of centre. As there is no lost motion in the roller ratchet, the vehicle begins to move instantly, although the pin may be only one-quarter of an inch off the centre. In this position the leverage is greatly in favor of the engine, and a stupendous starting torque is developed at the rear-driven axle. For each second of time the pump acts, the pin advances approximately one-quarter of an inch, and the wagon rapidly accelerates until the desired speed is obtained; all or which may occupy from 2 to 10 seconds, according to the speed desired. Having attained the desired speed, the lever is brought back to normal position, the pump disengages and ceases work, and the crank pin being oil locked, the wagon maintains a constant speed until the driver desires to slow down or increase it further.

To back the wagon the reversing lever is thrown over which causes the cage to recede and the rolls engage on the opposite incline.

With this power-transmission device and speed-changing mechanism it is claimed that the heaviest truck can be economically operated, up hill and down, backward or forward, without altering the speed or direction of rotation of the prime mover—the gasoline engine—and no belts, gears, chains, or other devices are required.

***

Noticeable progress was shown in the large exhibit of electric vehicles, which showed a much wider range of use than either steam or gasoline. A novelty shown for the first time was an electric tonneau car, constructed upon lines rather suggestive of gasoline types. The tonneau body is removable and in its place may be substituted a rumble seat, a hamper, or the rear platform may be left vacant for carrying heavy luggage. There are two motors, giving three speeds forward and three backward, and the batteries will carry the vehicle forty miles on one charge.

Two types of victoria were shown, one being the regular model, furnished with the usual victoria hood and nickel mountings, and the other having a canopy top and brass mountings. These models embody a number of noticeable improvements over the victorias placed on the market by the same makers over a year ago. The motors have been made more powerful, and the batteries are accessible for inspection at all times without taking them from the vehicle. The new driving gears are of the noiseless herring bone type. This has been one of the most popular electric vehicles, and many have been sold in this country and abroad. The Duchess of Marlborough recently purchased one, which was shipped to Blenheim Palace. There are three speeds forward and two backward, the maximum speed being fourteen miles per hour. The radius is forty miles on one charge of battery.

Another noticeable vehicle was an electric rear boot coupé, which is built exclusively for private service, and combines on a smaller scale the distinctive features of both the brougham and hansom types. The passenger compartment regularly accommodates two persons, but additional seating capacity is afforded by a hinged seat forward, facing the main seat, which may be lowered and brought into service. The location of the operator at the rear leaves the forward view from the compartment entirely unobstructed, a feature which makes the vehicle an especially convenient one for sightseeing or for pleasure driving at times when use of an open carriage might be undesirable.

An electric hansom was one of the most elegant and thoroughly distinctive electric vehicles in the entire exhibition. It is designed exclusively for private service, and all details of equipment and fittings are of the highest order of excellence. The body design departs somewhat from previously existing models, the top being more commodious and having increased window spaces. The interior furnishings include mirrors, speaking tube connecting with the driver's seat, a clock, and an electric incandescent lamp in dome fixture. A special feature of the vehicle is the wheel-steering arrangement, which is entirely new in hansom constructions.

Among the electric vehicles for business purposes was shown a large electric truck. The frame, which will accommodate any kind of a platform or body, is furnished in two sizes having load capacities of 10,000 pounds and 5,000 pounds respectively, with a smaller size for delivery wagons, and other vehicles for business purposes may be used. The running gear is of the reachless type with three-point body suspension. The truck exhibited is of two and one-half tons capacity, and has two motors, each developing a maximum of five horse power. A special feature is the vertical controller operated by a small wheel beneath the steering wheel, for which many advantages are claimed. There are two powerful foot-operated brakes, the regular brake being of the band type acting on the outside of the drum, and the emergency brake of the internal expansion pattern. There is also an electric brake in the controller. In addition to these safety appliances, there is a fuse kickout emergency switch by which the current can be cut off instantly. The undersing batteries are put in from below, and are held by an ingenious automatic device which reduces the trouble of changing batteries to the minimum. There are four speeds forward of 2, 4, 6, and 7½ miles per hour respectively, and three reverse speeds.

In addition there was exhibited a special service wagon, primarily intended for the department work of inspectors, superintendents, fire and police officials, and others requiring a high-powered electric automobile, suitable for hard service in all weathers. The running gear, control, and steering are similar to those of the electric tonneau. The extension back has a large closed compartment which may be utilized for tools or light luggage of any description. The top affords complete protection in stormy weather.

BOATS FOR SEAWANHAKA CUP.

New One Designed Comprising Several Novelties—Manchester Yacht Club the Challenger.

Eastern yachtsmen are taking considerable interest in the coming season's race for the Seawanhaka International Cup, which has been held by the Royal Canadian Yacht Club ever since 1896. The race will be sailed in the home waters of the latter club, Lake St. Louis. At the recent annual meeting of the Seawanhaka-Corinthian Yacht Club in this city the report of the Race Committee informed the members that the Manchester Yacht Club of Manchester, Mass., was the challenging club this year. Nothing definite was stated regarding the plans of that club for a suitable racing boat, but the fact has recently been announced that the Manchester Club syndicate has already ordered two boats from Burgess and Packard, and one is already under construction. The syndicate of the club builders is headed by A. Henry Higginson and Reginald Boardman.

A third has also been designed by E. A. Boardman, a member of the Manchester Club. He has embodied some novel features in his design, and yachtsmen are anxious to see the showing that the boat will make in the trial races. The outboard profile is the most marked departure from the usual type. The directions of rotation depending on the position of the rollers relative to the inclines. Each arm has connected to it a suitable rod whereby the reciprocating movement may be transmitted. The two sets of rollers working on the same steel centre are each actuated by a different connecting rod, so that a point at the extreme outer end, the water will roll off more easily. The idea is to cause the boat to slip out from the water without causing any great amount of frictional disturbance.

The needed strength to take up the hull strains will be secured by trussing. The water line has been carried almost as far as possible to the maximum, in order to get the greatest possible speed under the restrictions. The boat will be 41 feet over all, the forward overhang being 10 feet 6 inches, and the after overhang 4 feet 6 inches. The draught will be 9½ feet, with the board dropped. The yacht will be a stronger boat than the Mayasaoit, designed by Crowninshield for the trial races last year, and has been designed especially to encounter the heavy weather prevalent on Lake St. Louis. The beam will be 8 feet 4 inches.

This new boat will have a single cockpit, 13 feet by 5 feet and 2 inches. The sail area will be 492 square feet, 500 feet being allowed under the rules. Hollow spars will be used, their estimated weight being a trifle under 90 pounds. The tiller will come up through the deck, giving every facility for quick work. The centreboard will be of metal. The planking will be single and very light and covered with canvas.

COLUMBIA ATHLETIC GAMES.

Duffey Will Try for a World's Record at Seventy Yards—Many College Runners to Compete.

J. G. Prall of Columbia University has received assurances of a big entry of college athletes for the games of Columbia University, which will be held at the armory of the Twenty-second Regiment on the afternoon and evening of Feb. 28. From present indications it will be the biggest indoor intercollegiate and interscholastic meet ever held in this city. Yale alone will probably be represented by a score of athletes, and the colors of Harvard, Princeton, and Pennsylvania will also be conspicuous. Cornell is expected to enter a few of her long-distance runners. In the interscholastic events, which will take place in the afternoon, all the local schools that have strong athletic teams and many of the New England athletic academies will be well represented.

In the open events will be seen the best of the club athletes, including most of the metropolitan and National champions. There is no better board floor track in the country than that of the Twenty-second Regiment armory. The floor has just the right spring in it to make it easy for the sprinters to make fast time, and the tan-bap track has turns easy to negotiate for even so short a distance as a furlong race or a low-hurdle contest at the same distance. On this account it is confidently expected that one or two indoor records will be broken. This track will give Arthur F. Duffey, the phenomenal little sprinter, an excellent opportunity to place the world's record for seventy yards to his credit, something he has been anxious to do for the past two or three years. Duffey will have several of the fastest men in this country to pace him in this event.

BARNARD COLLEGE ATHLETICS.

Young Women Are Active Basket Ball Players and Have Formed a Ping-Pong Club.

Barnard College girls have developed quite an athletic spirit this college year and have organized several athletic teams modeled on those of their brother collegians at Columbia. The girls now have a golf club, a basket ball team, a chess club, a tennis club, and a ping-pong club, in addition to the Barnard Athletic Association which controls the undergraduate sporting activities.

The ping-pong club was organized recently with Miss Amy Hill, 1905, as manager, and Miss Cecil I. Dorrian, 1905, as Secretary. The club has already a membership list of over fifty and has in preparation an intercolass tournament.

Basket ball is the real "Varsity sport of the college. Besides the "Varsity team which represents the college in the intercollegiate matches there are several class teams which, besides playing in a contest of their own, also arrange outside games. The present make-up of the "Varsity five is: Forwards, Miss Helen Cooley and Miss Cecil Dorrian; centres, Miss Abigail Talbot, Miss Annie Fisher, and guards, Miss Margaret Hoffman and Miss Anna Reilley. On the freshman team are Miss Edith Somborn and Miss Caroline Hall as forwards, Miss Belle Russell as centre, and Miss Virginia Ralph and Miss Irma Seligman as guards. All the Barnard basket ball players are being coached by Trevanion G. Cook of the Fanwood Athletic Club, the director of the "Silent Five" deaf-mute basket ball team.

Barnard's tennis players had a Fall tournament, but owing to its slow progress the final honors were not decided before snow put the courts opposite the college out of use. The tournament reached the final round, in which Miss Edith Handy of the sophomore class and Miss Elsbeth Kroeber of the senior class will meet.

The chess club is the newest organization. It has chosen Miss Lillian Wiesner, a freshman, as captain of a team yet to be developed.

POOR WIND FOR ICE YACHTS.

KALAMAZOO, Mich., Jan. 31.—The international ice yacht regatta at Gull Lake was begun just before noon to-day, after postponements for nearly two weeks. The wind was light, and it was doubtful whether the yachts would be able to finish within the time limit of the first event, the Stuart International trophy. The course is two miles and return five times. At the first and second turns the yacht Dreadnaught of Shrewsbury River led the fleet, but on the third the Kalamazoo yacht Wolverine had the lead. The other Shrewsbury boat, the Scud, dropped out of the race at the third turn.

The yachts failed to finish within the time limit. The Wolverine finished the first heat 1 minute and 45 seconds ahead of the Dreadnaught.

The second attempt to sail a heat for the Stuart trophy also resulted in a failure. The Wolverine of Kalamazoo finished in 1:16, just one minute outside the time limit. The heat may be sailed to-morrow.

Skating and Hockey at Clermont Rink.

Three interesting skating races were among the features last night at the Clermont Skating Rink, Brooklyn. One was an exhibition half mile by Peter Sinnirud, who is about to become a professional. He covered the distance in 1:34. A one-mile Class A handicap was won by E. Mulligan in 2:55, with a handicap of 100 yards. Philip Kearney and A. G. Sarony, both starting from scratch, got second and third respectively. Kearney was only beaten for the winning place by ten yards. The one-mile Class B handicap was won by T. Hayward in 3:03 4-5 from 40 yards. H. McKeofrey, 120 yards, was second, and J. J. Clark, 100 yards, was third.

The hockey teams of the College of the City of New York and Stevens Institute played a match which was won after a hard fight by the City College, which scored 2 goals to 1 for the Stevens players.

Results of New Orleans Races.

NEW ORLEANS, Jan. 31.—McChesney and Scotch Plaid ruled favorites at even money in the Merchants' Handicap, worth $2,110 to the winner, the principal number on to-day's card. Despite all sorts of interference the chestnut son of MacDuff galloped home a head in front of his field. Edward Corrigan's Hargis ran a surprising race, but was outclassed. McChesney and Jim Clark, both ridden by Redfern, were the only winning favorites. Weather clear, track good. Summary:

FIRST RACE.—Selling; seven furlongs. Cori Kaiser, 110 pounds, (Fuller,) 8 to 1, won; Hodge, 92, (Scully,) 50 to 1, second; Paul Clayton, 106, (Redfern,) 13 to 5, third. Time—1:32. Andes, O'Hagen, Fading Light, Star and Garter, El Rey, The Messenger, Dodie S., and Katie Gibbons also ran.

SECOND RACE.—Five furlongs. Apple Sweet, 97 pounds, (Robbins,) 8 to 1, won; Agnes Mack, 97, (Lindsey,) 7 to 1, second; Henry McDaniel, 102, (Robertson,) 12 to 5, third. Time—1:01 4-5. Sir Knight and Tarrington, Orphans, Jack Birchwood, Carraher, and imp. Lady Tinkle also ran.

THIRD RACE.—Handicap; five furlongs. Scorpio, 11 pounds, (Winkfield,) 20 to 1, won; Summer Girl, 92, (Robbins,) 12 to 5, second; Mr. Frank Foster, 97, (Lamley,) 10 to 1, third. Time—1:14 2-5. If You Dare, Fodasal, Amagart, Dan Hallum, and Sapolio also ran.

FOURTH RACE.—Merchants' Handicap; mile and a sixteenth. McChesney, 122 pounds, (Redfern,) even, won; Hargis, 107, (Winkfield,) 10 to 1, second; Harry New, 103, (Lindsey,) 8 to 1, third. Time—1:48 2-5. Telamon, Jena, Flintlock, Carat, Ben Chance, Scotch Plaid, John A. Clark, and Old Hickok also ran.

FIFTH RACE.—Selling; mile and a half. Brief, 101 pounds, (Buchanan,) 4 to 1, won; Sells Coal, 106, (Lindsey,) 8 to 1, second; Hayward Hunter, 101, (W. Hicks,) 6 to 5, third. Time—2:37. The Way, Ceylon, Erne, Dragsamp, Determine, and Sir Vera de Vere also ran.

SIXTH RACE.—One mile. Jim Clark, 108 pounds, (Redfern,) 2 to 1, won; St. Tamanny, 109, (Davidson,) 15 to 2, second; Bard of Avon, 106, (Lindsey,) 9 to 2, third. Time—1:41 2-5. Emotion, Kilogram, Frank M., Eremack, Eva Rice, and Ray also ran.

PLANS FOR LOCAL GOLF

Important Matters for Metropolitan Meeting This Week.

Contest Expected in Awarding the Women's National Tournament—Fox Hills Club to Prepare Monthly Handicap Lists.

Local golfers experienced an unusually severe loss last week in the death of W. Alston Flagg, one of the organizers and prominent members of the Morris County Golf Club, and Vice President of the Metropolitan Golf Association. His name was proposed nearly a month ago by the Nominating Committee of the local organization for the Presidency, succeeding Percy Chubb, who declined a re-election. The choice was a popular one, for Mr. Flagg was one of the best-known golfers in the metropolitan district. He was an enthusiastic player, seldom failing to complete in the important events on the Morris County links, and last year he was Captain of the club. The nominee for Vice President of the local association is Charles F. Watson of the Essex County Club, and he may succeed to the chief office, as it is now too late for the Nominating Committee to name a new man. The annual meeting will be held next Tuesday night in the Metropolitan Club, and it is barely possible that nominations from the delegates may be made. A number of important matters respecting the local golf season will be decided at the meeting, and the links for this year's local championship will probably be chosen.

Judging from the sentiments of the women at the Women's Metropolitan Association last week, Chicago will not find everything smooth sailing at the annual meeting of the National Association in its efforts to secure the women's championship tournament. The Eastern golfers seem to be strongly opposed to the idea of going as far west as Chicago for their annual event. The Atlantic City Country Club has also applied for the women's contest, but there is no indication that Atlantic City is very popular among golfers for National tournaments. Chicago has never had the women's contest, and this is one of its strong arguments in favor of the event going to the West this season. The Chicago delegates will come to the annual meeting on Feb. 17 with strong arguments to back up their wishes. It is expected that some of the Philadelphians may argue for Atlantic City, and the prospect is therefore bright for a sharp contest over the award.

The Nassau Country Club of Glen Cove is the popular choice for the amateur championship. The Nassau delegates gave way last year in favor of Glenview, after being beaten on the first ballot by only one vote. The course is a long one of eighteen holes, and is admirably fitted to give a thorough test of golf. There are rumors that the Myopia Hunt Club near Boston may ask for the event, but if Nassau really wants the tournament the chances of other clubs will be very slim. Baltusrol is not regarded as a dangerous factor.

VISIT OF FOREIGN GOLFERS.

One of the most important topics that will come before the delegates to the National Association meeting will be the proposition to invite a team of Cambridge and Oxford golfers to visit America this year. G. Herbert Windeler and R. H. Robertson were both in England last year and they have both stated that plans have been made which will be perfectly satisfactory to American golfers. What the plan is will be divulged at the coming meeting. This international golf feature is attracting attention among English players as well, and a London newspaper recently referred to the project as follows:

"It is to be hoped that no pecuniary consideration will hinder the best men from being chosen, as American young men have taken very kindly to golf, and will take a good deal of beating. It may be remembered that a similar project fell through last year owing to the attitude of our cousins across the Atlantic in regard to the amateur status. It was proposed that some portion of the expenses of the visiting team should be defrayed by American clubs, and the objections being raised to this course of action, the contemplated visit was abandoned."

The annual match this year between the Oxford and Cambridge golfers will be played on April 23, on the Sandwich Golf Links, England. Some of the players who will compete in this tournament will undoubtedly be on the team that proposes to visit America.

G. Herbert Windeler, the nominee for the Presidency of the United States Golf Association, has taken an active part in the formation of the new Massachusetts Golf Association, and he, with the other members of the Constitution and By-laws Committee, has recently drawn up the code of government for the new organization. Over thirty clubs have joined the Massachusetts association, and the final meeting to adopt the constitution and perfect the organization will be held in Boston on Feb. 24. The proposed constitution is modeled upon that of the Metropolitan Association, but it has failed to specify that clubs holding open or invitation tournaments must have their dates sanctioned by the local association. This is simply done as a convenience and justice to other clubs, so that important events may not conflict. The Boston delegates intend to have a rule embodying this provision inserted in their by-laws. It is also probable that the par score handicap system just inaugurated and adopted by the New Jersey Golf Association will be accepted by the Massachusetts golfers.

The constitution for this new State association specifies that membership will be limited to clubs in the National Association, and this has met with general favor. The Executive Committee will consist of nine members, and the annual meeting will be held in the third week of January. A championship tournament will be held each year. The committee that has been instrumental in making the organization a success consists of G. Herbert Windeler, Brookline; Herbert Lee, Myopia; Lewis Ledyard, Oakley; Warren Merrill, Essex County; A. L. Ripley, Oakley; R. R. Freeman, Wollaston; E. A. Wilkie, Newton; C. A. Bowles, Springfield. Permanent officers for the year will be elected at the coming meeting.

FOX HILLS HANDICAP SYSTEM.

The Handicap Committee of the Fox Hills Golf Club, Staten Island, will begin its duty of handicapping members this month. The committee intends to revise the handicap schedule every month hereafter. In order to establish the club handicap list, each member has been asked to send to Mortimer M. Singer the best score in match play and the best score in medal play that he ever made over the course and also his own estimate of what his average score ought to be. Careful account will be kept during the monthly competitions of the season, and as members improve, their ratings will be changed each month. This system, while entailing plenty of work upon the Handicap Committee, is sure to stimulate interest in the club competitions, and will undoubtedly have the effect of bringing out nearly the full playing force of the club.

The annual dinner of the Fox Hills Club has been set for Thursday evening, Feb. 26, at the New York Athletic Club. M. M. Singer, Joseph J. O'Donohue, and Hugh O'Donohue comprise the dinner committee. The golfing policy of the club for the season will be announced. While the club's golf was not as successful last year as the previous season in the number of victories, nevertheless, it made a very creditable showing. In 1901 the Fox Hill team was only beaten once and won out a dozen matches.

The Westchester Golf Club has made plans for an active season, and several tennis courts will be laid out, as the club has plenty of room for the addition of that sport. The new officers recently elected are: President—J. A. Coffee; Vice President—H. Tarrington; Secretary—A. York; Treasurer—J. E. Boyce; Captain—D. D. Compton; Committee—W. H. Beardman, A. F. Matthews, F. A. Goetze, and F. M. Nicholas. Compton was Captain and champion of the club two years ago. Last year the Captaincy was held by Dr. J. L. Savage, the physical director of Columbia University. The club tournament season will begin early in the Spring. The links, however, are not closed, being open all Winter for practice.

Yale golfers are making early preparations for the coming season, and in order to give a good start to the formation of class golf teams Captains have been elected in every class, as follows: Senior—F. J. O. Alsop; Junior—Percy H. Jennings; Sophomore—Archibald Rogers; Freshman—S. Smith. Sheffield Scientific—Reid Hunt. M. Fitchmond; Junior—R. C. Carroll; Sophomore—E. M. Dailey. A series of inter-class team matches will be arranged in the Spring, and there will also be a university golf tournament. The seven class teams will play every other match, and the two winning the greatest number of matches will meet in a thirty-six-hole contest for the class championship.

The Ekwanok Country Club of Manchester, Vt., has just announced the dates for some of its important Summer tournaments. The first big event will be on July 2, 3, and 4, for the Ekwanok Cups. This will be followed by the Taconic Cup tournament on July 23, 24, and 25. There will be two President's Cup competitions in August, the first coming on Aug. 6, 7, and 8, and the second on Aug. 27, 28, and 29. An open tournament for women will be held on Aug. 20, 21, and 22. Paul Watermaid has been reappointed Captain of the Green Committee. He is a member of the Lakewood Golf Club, and is now playing in the Palm Beach tournaments. George Low, the Dyker Meadow Club's professional, will have charge of the Ekwanok course this season, as formerly.

The annual meeting of the Innis Arden Golf Club of Sound Beach, Conn., was held last week, and the officers chosen for the coming year are: President—James W. White; Vice President—A. H. Wiggin; Secretary—Percy D. Adams; Treasurer—Eugene O. Washburn; Captain—H. S. Hadden; Governors—Ralph H. Hinchman, Clayton Rockhill, Frederick K. Rupprecht, and Frederick W. Tuttle. The new committees will soon be appointed, and the usual list of tournaments for the season will be announced at an early date.

Ice Trotting on Saratoga Lake.

Special to The New York Times.

SARATOGA, N. Y., Jan. 31.—The trotting event on the kite-shaped track on Saratoga Lake this afternoon was won by M. Dwyer's Dan J. of Saratoga. Four heats were trotted, Dan J. winning the first, third and fourth in 2:27, 2:27½, and 2:23½.

W. H. Gailor's Grace L. of this place won the second heat in 2:28. The two other starters were C. Lohne's Lady Foxwood of Saratoga and L. Bibbey's Vinto of Glens Falls.

CRESCENT A. C. SHOOTING.

L. C. Hopkins Wins January Cup for Best Three Scores of Month.

The final weekly competition for the January Cup offered by the shooting committee of the Crescent Athletic Club of Brooklyn to the member making the best three scores in the weekly club shoots was decided yesterday afternoon at the club traps at Bay Ridge, and the trophy was won by L. C. Hopkins, whose best three scores were 50, 49, and 47, a total of 146 in a possible 150. The three next best scores were made by G. E. Pool and were 49, 47, and 44, a total of 139 in a possible 150.

Among the competitors in the other events were Capt. A. W. Money, and his son, Harold Money, of Oakland, N. J. The latter also shot in the cup match, but not in competition, making 44 in a possible 50, the second best score of the day. The best score was 48, made by W. W. Marshall.

Two special trophy matches at 50 targets each were shot, and both were won by Harold Money, who broke 48 targets out of a possible 50 in the first event and 46 in the second. There were also several handicap events. The scores follow:

JANUARY CUP.

Weekly competition, fifty targets, handicap, best three scores of month to win.

Name.	H.	B.	T.	H.	B.	T.	Grand Total.

FINEST LION HOUSE IN THE WORLD

Will Be Opened This Week in Bronx Zoological Park.

Ornate and Novel Structure the Home of a Fine Collection of Felines Brought from Many Lands.

The new lion house, which is to be opened at the New York Zoological Park to-morrow, is the finest building in the world to be erected for such a purpose. It has every possible modern improvement, many of its features being entirely novel for such a structure. It promises also to remain for some years to come the most elaborate and attractive of the buildings in this park.

The opening to-morrow will be only to members of the New York Zoological Society and their guests. Among the latter there are expected to be present the Mayor, the Board of Estimate, and various other city officials. On Tuesday morning the building will be thrown open to the public and the splendid collection of felines which have been gathered here will make their bow to the people of New York.

Among the most conspicuous features of the new building are the cages. There are twelve of them, along the side of a corridor 192 feet long. Six of the cages are extra large, 18 by 22 feet in size. These are for the large lions. Then there are six smaller ones, 12 by 22 feet in size, designed especially for the leopards, pumas, and cheetahs.

The first feature of these cages that will attract the visitor's notice is that instead of having iron bars, so suggestive of a prison, in front of them, they have wire netting. This is an innovation in the confining of dangerous animals. The view of the captives is obstructed to a less degree than in any other form of cage that has so far been devised.

The mesh of the netting is three inches square. The horizontal wires are relied upon to resist the attacks of the animals. These are made of hard steel, and each wire has a tensile strength of 4,500 pounds. The end of each wire is wrapped around a heavy frame of round wrought iron, twisted slightly upon itself, and the end soldered down. The horizontal wires are held in place, and equidistant, by perpendicular tie wires, three inches apart, wrapped around the horizontals at each point of intersection, and firmly soldered.

The whole of this iron and steel work is painted a dull olive green, to match the tiling of the interior of the cages. As to the strength of this device, it is estimated that if the iron bars holding the various panels of the front of the cage remain in place it would be impossible for an elephant to break through the partition.

DECORATED GREEN WALLS.

The floor of the cages is three feet above the floor of the corridor arranged for spectators. This cage floor is made of narrow wooden strips, so that the whole resembles the floor of a bowling alley. It is considered that concrete floors would be too hard on the feet of the animals. The walls of the cages are made of tiling painted a dull olive green, imitating as nearly as possible the native surroundings of the animals. This tiling reaches about eight feet high, and then there is a border, in some cases representing the jungle, in others the desert, and the ceiling above blends into a light-gray color. In the top is a small skylight, designed to give precisely the amount of light needed by the occupants of the cage.

In the rear of the cages is a sleeping cage for each of the two animals intended to occupy the full cage. These are about four feet high. The tops of them are flat, serving as a sort of balcony. There is a huge stump, cut in the form of what stage carpenters call "practicable steps" for the animals to mount to this balcony. There is a steel door to each of the sleeping cages, operating on a trolley, and which may be opened, closed, and bolted by pulleys from the keeper's passageway under the cages.

The public corridor is well lighted by skylights and by windows in the walls opposite the cages. Just in front of these opposite walls there is a raised platform, two steps high, with oak settees against the wall, intended to enable the visitors to overlook the heads of those who may be in front of them on crowded days. In the centre this western wall is broken by a hexagonal alcove, the side walls of which are unbroken by windows. It is proposed to hang on the walls of this alcove paintings and photographs of carnivorous animals which are extinct or too rare to be in the collection on view.

Along the walls opposite the cages are also to be placed maps of Asia, South America, and Africa, colored so as to show the native homes of the various felines exhibited. There is also a brief description, in popular terms, of the animals and their characteristics.

In front of the cages is a narrow gauge iron track for the cart containing the food of the animals. There is a very complete system of drainage. The whole building is heated by hot water, the temperature being automatically regulated by the most improved pneumatic apparatus.

There are also several striking cages on the outside of the building, where the animals will have more freedom in Summer. The series consists of three enormous cages—two semi-circular and one square—and six smaller cages. Each of the large cages represents two of the interior dens, and at first will be used by the occupants of the dens alternately. The large semi-circular cages are 88 feet wide and 42 feet 6 inches deep. The large central square cage measures 88 feet each way. The smaller cages are 12 feet 6 inches wide by 24 feet deep. The fronts of each cage are of wire netting, similar to those on the interior.

A STUDIO FOR ARTISTS.

At one end of the building there is still another novel feature. It consists of a studio for painters, sketch artists, and sculptors. This is a large, well lighted room, its floor being step-shaped, to accommodate the easels of artists and to prevent any one getting in any one else's way. On one side of this room there will be a cage partitioned off to which the animals may be brought for the special benefit of the artists, enabling them to work without interference or annoyance from visitors.

This cage will have in its centre a trap door, through which a small traveling cage containing an animal may be inserted and the animal released from its traveling cage. The operation of these traveling cages from below constitutes one of the most interesting features of this whole building and one which the public will seldom be permitted to see, if at all.

Under the sleeping dens of the interior cages there runs a passageway, about eight feet wide and eight feet high. It has a wide track and a car fitted for its special objects. A shaft has been arranged between each pair of sleeping dens, with a door entering each one. On the car there is an elevator operated by a hand mechanism. The elevator car is also the traveling cage for animals in the building.

When an animal is received he is placed in this cage outside the building. The elevator is lowered, the car runs along the track to the shaft entering the cage intended to be used, the elevator is raised, the doors are opened, and the captive enters his new home. When it is desired to move animals from one cage to another or from a living cage to the studio cage this elevator and car are called into service.

That there may be no possible mistakes in the opening and closing of doors, the pulleys in the passageway below which operate the different doors, have green and red tags attached to them. The red tags signify that that pulley opens a dangerous door. The green tag signifies that its pulley can cause no harm. To still further guard against accidents there is a speaking tube from the front of the cages to this passageway, thus giving the operator below the benefit of the observation from the public's side of the cage.

Great attention has been paid to the carvings and sculpture decorations of the building. There are to be four life-size sentinel lions at the two entrances. There will be two life-size lion heads on one side of the structure, and along the cornice there will be life-size heads of various smaller felines. Eli Harvey was engaged to come over from Paris especially for this work. His decorations are somewhat novel in that they represent natural and not apocryphal beasts.

The lion house will open with a pretty full collection of inmates. They have been collected from many parts of Europe and Asia, and the prominent zoologists and animal collectors, constitute the finest collection of their kind in this country. Director W. T. Hornaday of the Park, made a special tour of Europe last Summer to select the animals which were to go into this collection.

SOME DISTINGUISHED INMATES.

The greatest interest will undoubtedly centre in the magnificent Barbary lion presented to the institution by Andrew Carnegie. This specimen has been named Hannibal. He is eight years old and has a splendidly luxuriant mane. He has developed a habit of posing in the middle of his cage, for love of admiration. Hannibal's mate is a big lioness who has been named Cleopatra. She was presented by O. H. Payne.

Another pair of Barbary lions, equal to the finest to be found in captivity anywhere, are the gift of Nelson Robinson. The male of the pair has been named Sultan. He is four years old and is considered to be as handsome and perfect a specimen as ever trod a cage floor. He is also unusually good tempered. Sultan's mate—an Abyssinian lioness named Bedouin Maid—is also a wonderfully perfect animal. She recently gave birth to five cubs, before she had been removed from her travelling cage. Bedouin Maid, besides being very handsome, is a good mother, and she attends to her own cubs.

A lusty young Nubian lion, Dongola by name, between two and three years old, was presented to the collection by Cleveland H. Dodge. This animal is of the short-maned type. The sixth lion is a beautiful female, about a year old, imported from Senegal, West Africa, and presented by Phillip Schuyler. She has been named Sandibel, and her disposition has already made om her a prime favorite with the keepers of the Lion House.

The finest pair of tigers that could be obtained in all Europe were added to the lion house by Charles T. Barney. They hail from Northern India, and, although they are now of fine size, they are only two and a half years old, and have not yet attained their full stature. They are exceptionally handsome animals, and have been named, respectively, Rajah and Ranee.

A very strong and vicious tiger cub one year old is the gift of Henry Fairfield Osborn Jr., whose father has had so much to do with developing this whole collection. This little beast comes from Singapore, but from the length and abundance of its hair, it is believed that its native home was some portion of China. If this supposition proves to be true, the animal will be especially interesting to zoologists.

In the interior of Paraguay William Mill Butler of Philadelphia, Secretary of the Paraguay Development Company, brought about the capture a year ago of an animal which has caused the first tragedy of the lion house, and which is certainly one of the largest and finest jaguars in existence. This animal is named Lopez. He was considered a very gentle and amiable specimen, and after various efforts to test his disposition a female jaguar was not many weeks ago introduced into his cage. Immediately the big animal sprang upon her, broke her neck, and killed her in a couple of minutes. The injury was inflicted by a square bite, with no wrenching. Veterinarians who performed an autopsy over the murdered female said that the exhibition of strength shown by the big male was as astonishing as it was shocking. As a penalty for his ferocity, Lopez has been condemned to live in solitude for the remainder of his life.

Another interesting member of the lion house collection is a beautiful and full-grown specimen of the cheetah, or hunting leopard. This animal is quite rare in captivity, and was presented to the park by Jacob H. Schiff. It was secured for the park through the special courtesy of Director Heck of the Berlin Zoological Gardens.

Two snow leopards—rarest of all large feline animals—have been purchased for this collection in London. They were to be shipped from Calcutta, and are supposed to be now on their way. They are the gift of Mrs. Emma B. Auchincloss. If they reach New York in safety they will constitute the third and fourth specimens now in captivity. The other two are in London and Berlin.

William D. Sloane has presented to the lion house a pair of jet black leopards from the Malay Peninsula. A Manchurian leopard, imported by way of Shanghai, and representing the most northern form of leopard of Africa and India, is the gift of Philip Schuyler. Frederick L. Eldridge has presented a male African leopard. It is intended, if possible, to install this animal as a cage mate for the female Indian leopard presented by Capt. Thomas Golding.

LEGAL NOTES.

RIGHTS OF OWNER OF STOLEN POLICY.—George L. Wilcox was insured for $2,000 in the Equitable Life Assurance Society. His policy was a twenty-payment one and contained a clause providing that if at least three premiums shall have been paid and then default made in payment of a subsequent premium the society would issue in lieu of the policy a new paid-up one in favor of the insured, without participation in profits for as many twentieth parts of the original amount assured as there shall be complete annual premiums paid up to the date of the default. It was further provided "that said policy shall be surrendered, duly receipted, within six months of the date of default in payment of premium on said policy." After Wilcox had paid premiums for seven years his policy was stolen from him. The next year he paid no premium and demanded a paid-up policy, informing the society that he was unable to deliver his policy because it had been stolen. A demurrer interposed by the Equitable Society to the complaint in an action brought against it by Wilcox to compel the issuance to him of a paid-up policy, which was sustained at Special Term of the Supreme Court and also in the Appellate Division, has been overruled by the Court of Appeals. The court of last resort holds that the fact that the policy was stolen from Wilcox without any fault on his part, and the further fact that he was unable to comply with the condition requiring the policy's surrender and receipt within six months, constituted in equity a sufficient excuse for the non-performance of that condition. "Equity," said Justice O'Brien, who gives the opinion, "will not deny to the plaintiff the relief sought simply because the policy had been stolen. When that fact appears, and that the plaintiff has used due diligence to reclaim it, and that he is still the owner of the policy, a case is stated which constitutes grounds for equitable relief."

***

INJURIES WHILE ALIGHTING FROM CAR.—The plaintiff in the case of Foster vs. Old Colony Street Railway was injured while alighting from a street car by reason of the slippery condition of the steps. The accident occurred during a storm of snow and sleet. The route of the car was about five minutes each way. Before the car started on its trip during which the accident occurred it had waited at least fifteen minutes. By the rules of the company it was the duty of the conductor in case of a storm to sprinkle sand on the platform and steps. The plaintiff testified that she knew that she had to look out for herself because it was slippery. The conductor swore that there was a sand pail at each end of the car. The Supreme Judicial Court of Massachusetts held that there was sufficient evidence to warrant a finding that the railway company had undertaken to prevent, and could have prevented, the steps from being slippery. The court said in part:

"The defendant contends that it is not practicable for a street railway company to prevent the open steps of its cars from becoming slippery during the continuance of such a storm as that in question in the case at bar, either by shoveling off the snow, sleet, or ice, which must accumulate on the steps, or by spreading sand or sawdust on them. But under the special circumstances of this case we do not think that that question arises. * * * We think that the foregoing evidence, coupled with the testimony of the conductor that he put 'about a quart of sand on the step at about half-past 9 o'clock, while the car was waiting at the railroad station, and the testimony of the plaintiff's witnesses that there was no sand on the step when the accident happened, and that there was no sand pail on the platform, was evidence on which the jury were warranted in finding that the defendant was negligent."

T. P. GILMAN OUT OF OFFICE.

Ex-Deputy Controller Becomes Head of Corporation and Estates Company.

Theodore P. Gilman, whose resignation as Deputy Controller of the State of New York took effect last night, accepted the Presidency and a Directorship in the Corporation and Estates Company yesterday. Edward H. Pindar, who has been chief of the Transfer Tax Bureau of the Controller's office in Albany for the past fifteen years, has also been elected a Director, and having resigned his Albany position will assume charge of a department in the Corporation and Estates Company Feb. 15.

Numbers of prominent people too honest to impose upon others, and too generous to be imposed upon themselves, use and recommend DR. D. JAYNE'S EXPECTORANT for Coughs and Colds.—Adv.

FIRE AND SMOKE CUT OFF STAIRWAY

Several Narrow Escapes and Difficult Rescues by Police.

Scantily Clad Persons Who Crawled Through a Skylight Compelled to Stay Out in the Cold Air.

Fire originating from an overheated furnace in the basement of the four-story brownstone front dwelling at 225 West Forty-fifth Street at 4 o'clock yesterday morning burned upward through the stairway and cut off the means of escape of several men and women who occupied rooms on the upper floors. Some managed to get out through the skylight to the roof, where, being unable to attract the attention of occupants of houses adjoining, they were compelled to remain scantily clad in the cold for more than half an hour.

The dwelling is occupied by Mrs. Margaret Hobart as a boarding house. Belle Kelley, a servant girl, half strangled by the smoke, was awakened by her coughing. She occupied a room on the top floor. Near her slept Theresa Pennes, the cook. Groping her way to the latter's bed, she aroused her with difficulty, and then ran to the room of Dr. Stanley, a dentist, on the same floor at the front, and awakened him.

The three started down the stairs, arousing the other sleepers by their shouts, but they were unable to descend to the door, and had to turn and run back to the top floor. The smoke being so dense that they could hardly breathe, they aided each other in climbing through the scuttle on to the roof.

The police who turned in the alarm had great difficulty in getting into the house. Mrs. Hobart, the landlady, was in the front room on the first floor, but was unable because of the fire to get into the hall to open the door. Policeman Sweeney tried to climb in at the window, but slipped on the sill and fell into the areaway, sustaining severe cuts and bruises about the head and hands. He was attended by Dr. Nesbitt, a police surgeon who lives across the street from the Hobart house, and taken to the station house in a serious condition. Later he was taken to his home.

Policeman Gerber found the key which Mrs. Hobart threw out of the window and opened the front door. Rushing through the smoke and fire which filled the hallway, he carried Mrs. Hobart from the parlor to the street. Policeman Fitzpatrick then went up stairs, and Gerber went into the adjoining house, No. 223. On the third floor Fitzpatrick found Mrs. Morrill unable to get out into the hall. The patrolman opened the window, and shouting to Gerber, learned that his comrade was at the window adjoining. Out onto this sill Mrs. Morrill, who is a very stout woman, climbed, and, with the assistance of Fitzpatrick on one side and Gerber on the other, managed to get into the other window four feet away. She had suffered painful burns about the face and hands, and had lost nearly all her clothes, she having escaped in her night robe.

In the rear of the same floor Fitzpatrick found Mr. and Mrs. John Hilton partially overcome by smoke and helpless. The patrolman passed both of them through the rear window to an adjoining window in the next house, where they were aided by Gerber.

Two alarms were turned in for the fire. When Engine Company No. 54 and Hook and Ladder Company No. 4 arrived, and before hose connections could be made, a young woman was seen clinging to the sill of a window on the third floor, screaming for assistance. She was Mable Conreich. While the firemen were hoisting their ladders the smoke became so dense that she was completely hidden from view. Truckman Frederick Veith and Fireman Hamilton Rider ascended a scaling ladder and passed the young woman to Alfred Walbaur in the window of the adjoining house. Another woman was rescued similarly.

The fire was confined largely to the third and fourth floors, but those apartments were burned out. Mrs. Hobart estimates the damage done at about $10,000. It was covered by insurance.

EIGHT FIRES IN A PRECINCT.

Detectives and Fire Marshal's Inspectors Trying to Find an Incendiary.

Eight fires occurring within as many hours yesterday morning in the vicinity of the West Forty-seventh Street Station, and the fact that there has been an unusually large number of blazes in that section of the city during the past month, have convinced Police Capt. Schmittberger, Capt. Martin Morrison of Engine Company 54, and the Fire Marshal that some person or persons are starting them maliciously. Patrolmen, detectives, and inspectors of the Fire Marshal's office are working day and night in an effort to find the incendiary, if there be one, and Capt. Schmittberger has promised the officer who learns who the firebug is and arrests him that he will be specially recommended to the Commissioner for promotion.

The series of fires in that locality between 1:30 and 8:05 o'clock yesterday morning was remarkable. The first alarm was sent in at the former hour for a blaze in the basement of 832 Ninth Avenue. At 4:12 there was a two-alarm fire at 225 West Forty-fifth Street. Then others were turned in as follows: At 4:30 o'clock, 779 Tenth Avenue; 5:30, 418 West Fifty-second Street; 6:05, 819 Ninth Avenue; 6:10, 435 West Sixty-fourth Street; 8, a still alarm, 453 West Forty-sixth Street, and 8:05, a second alarm from 819 Ninth Avenue, necessitated by explosion of gas in the basement after the first fire had been extinguished.

During the past month, according to Capt. Morrison, Engine Company 54 has responded to forty calls in the vicinity of the engine house in West Forty-seventh Street. On some single days the company was called to four fires, and on Jan. 28 there were two burning simultaneously within a hundred feet of each other—at 409 and 428 West Fifty-third Street.

There is a remarkable similarity in the character and apparent origin of a majority of these fires. The two simultaneous fires on the same block in West Fifty-third Street were found to have originated at the floor of cellar stairs. Capt. Morrison says it appears most suspicious, inasmuch as there is seldom any stove or fire in the cellar of a tenement house. He also says that most of these fires were set or started in some way near the gas meters. In some cases explosions followed the melting of the lead connections. This was the case at 819 Ninth Avenue yesterday. There have been several individual cases where the circumstances have been particularly suspicious. One instance was given by Capt. Morrison where three fires occurred in the same building, and somewhat similarly, within thirty days.

Three weeks ago there was an epidemic of small fires, any one of which might have proved very serious had it not been discovered early, in the precinct of the West Sixty-eighth Street Station, adjoining Capt. Schmittberger's district to the north. For two or three weeks prior to that there had been a number of suspicious blazes in the precinct of the West Thirty-seventh Street Station, adjoining it on the south.

WOMAN RESCUED IN SMOKE.

Policeman Carried Her Down from a Tenement's Sixth Floor.

Patrolman William F. Henne of the Mercer Street Station yesterday afternoon, during a fire, which started on the fifth floor of a six-story double tenement, at 104 Macdougal Street, carried a sick woman from the top floor to the street. Henne was nearly blinded by smoke, and in addition to carrying the woman, he assisted in getting her seven-year-old boy to a place of safety.

Henne was on post on Macdougal Street when he heard a cry of fire. Looking up he saw a blaze coming from the front windows of an apartment on the fifth floor of the tenement. After sending in an alarm he rushed through the building warning the people of the danger. When he reached the fifth floor he found that the fire was in the apartment of a Mrs. Hopewell, who had gone out.

He then learned that a colored woman, Mrs. Joseph Brown, and her son, Maxwell Brown, were in bed on the sixth floor. He found the woman and her boy on their knees praying and terrified with fear. He picked the woman up in his arms and telling the boy to follow, descended the stairs through the smoke, guiding himself by the hand rail.

Stern Brothers

are now showing in the

New Annex to Their

Women's Costume Department

A large assortment of

Street and Evening Gowns

in all the newest materials

For Present and Early Spring Wear

To-morrow, Monday

Special Offerings of

Colored & Black Dress Fabrics

3,000 Yds. { IMPORTED NUN'S VEILINGS AND MISTRAL ETAMINES, 42 and 44 ins. wide, in the newest Spring Shades, including Ivory, Cream, White and Black — 69c

Also a Large Purchase of

Cotton Dress Goods

Consisting of

7,500 Yds. { 36 INCH JAVA AND PANAMA LINEN AND 27 INCH CRASH AUTOMOBILE SUITINGS, — 18c

8,000 Yds. PLAIN SILK MOUSSELINES, — 19c

6,500 Yds. { EMBROIDERED SPOT MOUSSELINES, in all colors, white and black, — 23c

Value 35c & 50c yd.

Misses' Suits, Waists & Dresses

In Enlarged Department On Second Floor

New Spring Models

FINE CHEVIOT NORFOLK WALKING SUITS, black, blue, brown and gray, 14 to 18 yrs. — $15.00

SILK WAISTS, 14 to 16 yrs., of Taffetas and Peau de Cygne, — $3.95

MISSES' COTTON WAISTS, 14 to 16 yrs., of Piques, Damasks and Lawns, — $1.98, 2.95

GIRLS' PLAIN & FANCY GINGHAM DRESSES, Guimpe and High-neck Effects, 4 to 14 yrs. Special — $1.98, 2.85

Bedsteads Important Sale

Best Quality, Regular Stock. Selections Made Now Will Be Held Until Wanted.

200 White Enamel, Brass Trimmings, — $3.50, 5.50, 9.50

Reduced from $4.50, 6.75 & 11.50

300 Brass Bedsteads, — $19.50, 25.50, 42.00

Reduced from $27.50, 35.00 & 56.00

MATTRESSES, SPRING UNDERBEDS, FEATHER PILLOWS AND BOLSTERS, MADE IN THEIR OWN WORKROOMS.

Curtains Special Values

CROSS STRIPED CURTAINS, all colors for windows and portieres, Pr. — $1.00, 1.95, 2.65

West Twenty-third Street

ASSAY OFFICE ABLAZE

Crowds Watch Fire in the Storehouse of Gold.

Over $40,000,000 in Bars on Hand—Police Reserves Guard the Sub-Treasury During the Confusion.

Wall Street was startled yesterday by the unusual scene of a fire in business hours, right among its fireproof "skyscrapers," when the United States Assay Office was discovered to be on fire about 12:30 o'clock. Thousands of clerks, office-boys, typewriter girls, and bankers, brokers, and lawyers crowded the approaches to that part of Wall Street on which the Assay Office is situated, and filled every window of the many "skyscrapers" in sight of the fire. The street crowds were driven back to Broad Street and towards William Street by the police reserves of the Old Slip, Church Street, Oak Street, City Hall, Brooklyn Bridge, Elizabeth Street, Leonard Street, and Mercer Street Stations.

There were nearly 200 policemen at the fire, and they were mostly employed to protect the Sub-Treasury building from any possible attempts at robbery. There was in the Sub-Treasury a large amount of bonds and circulation, the total value being nearly $270,000,000. The moment that the alarm of fire in the Assay Office was given crowds swarmed up the steps of the Treasury, but the barred doors were shut at once.

The fire started in a wooden flue which was employed to carry the fumes of the fluids used to test the precious metals in the laboratory to the chimney. This flue had once been lined with metal, but the nitric acid fumes had eaten through this and prepared the wood so that it took fire very easily. The fire was seen first by E. E. Sage, an assistant assayer. The force of sixty men at work on the floor of the laboratory, which was situated in the front part of the second story, at once got out a hose and attempted to extinguish the flames, but they did not succeed, and as the fire gained headway one of them ran out and turned in an alarm.

At once all the precious metals which had not yet been put into the fire and burglar proof vaults were carried to safety by the employes. About $1,500,000 was still lying around loose in the various parts of the building, while already stored in the vaults was nearly $40,000,000.

Soon after the arrival of the firemen they got the flames under control, but not before some of the rafters which support the roof had burned through. The tin sheathing which covered the roof had to be torn open and some of the timber had to be removed. More damage, however, was done by water and smoke, especially to the records stored in various rooms and to the instruments. To these the damage will be nearly $3,000, while the damage to the building will be $2,000 more.

The building used by the assay office is historic. Before it began to be used as an assay office, forty years ago, it was a Government mint, and for a time it was the United States or Government bank. The structure is of graystone and brick and very old-fashioned. Employes and officials of the assay office said the building was never intended for an assay office and not adapted at all for such uses. Hope was expressed that the fire would call attention to the need of a modern structure and a different site.

About a week ago Secretary Shaw recommended to Congress that $750,000 be appropriated to build a new assay office, as the building was old and unfit for the use to which it was put.

FRENCH AMBASSADOR HERE.

M. Jusserand and His American Wife See America for the First Time—He Talks About Venezuela.

Jean Adrien Antoine Jules Jusserand, who succeeds Mr. Cambon as Ambassador from France to the United States, arrived here yesterday on the French liner La Lorraine. Like the two most recently appointed foreign envoys to this country, Sir Michael Herbert and Baron Speck von Sternburg, M. Jusserand brings with him an American wife. Mme. Jusserand, however, who was Miss Elise Richards, was born in Paris, and though her parents lived in Boston she has never seen her own country.

M. Jusserand had not heard that France, through her Chargé d'Affaires at Washington, had taken the lead in a protest against preferential treatment of Great Britain, Germany, and Italy in the settlement of the claims against Venezuela.

"Although I heard nothing of it in Paris," he said, "I am not surprised to hear that such action has been taken. I shall not know, however, until I reach Washington, where I expect to find cablegrams containing my instructions.

"The general opinion in France is that the Venezuelan affair will be brought to a peaceful termination. France so far has managed to keep out of it, and I am sure that nothing will occur to disturb her friendly relations with the countries involved. The French have preserved a neutral attitude, and there has been no expression or indeed any occasion for expression of hostility to Germany or Great Britain. Moreover, the relations of France with Venezuela are well defined by the Franco-Venezuelan treaty, by which a portion of the customs receipts go to France.

"No; there is no significance in my coming to Washington at this time. I have been in Denmark for the past four years, and you see I am here as soon as possible after receiving my appointment. Naturally I am much pleased at my appointment to Washington, and I esteem it a very great honor to have been chosen for this post."

M. Jusserand, like his wife, is paying his first visit to this country, and while coming up the bay both examined with interest the sights of the harbor. The new Ambassador looked puzzled when La Lorraine neared the Battery and he got a good look at the tall buildings.

"I think that you build these to astonish Europeans. I have heard that they are begun at the top," he said.

"They are remarkable," exclaimed Mme. Jusserand.

The Ambassador was met at the pier by Soulange Bonnier, the French Consul General here; Henri Maillard, the President of the French Benevolent Society; Henri Gourd, the President of the French Chamber of Commerce of this city, and Eugène de Bocanda, the agent of the Compagnie Générale Transatlantique. M. Goffiot, James H. Hyde's secretary, was also at the pier, and M. Jusserand accepted an invitation to preside at the convention of the Alliance Française, to be held here on March 17.

The Ambassador and Mme. Jusserand and G. L. Richards, a civil engineer of Washington, and a brother of Mme. Jusserand, who came on to meet her, left the dock at 4:30 and took the first train to Washington.

The new Ambassador is forty-seven years old, small, bearded, slight, and dark. He speaks English well, as he was Chancellor of the French Embassy in London from 1887 until 1890, and previously he had been French Consul there. He has occupied various posts in the French Foreign Office, and in 1892 was made an officer of the Legion of Honor. He is well known also as a litterateur, and among the theses which won him his doctorate of laws at the Faculty of Lyons were "Les Anglais au Moyen Age," "Le Roman Anglais," and "La Vie Nomade et les Routes d'Angleterre au XIVe. Siècle."

SHORES AGAINST THREE PARK AVENUE HOUSES.

Building Department's Efforts to Prevent Damage by the Settling of Structures Near the Subway.

The residence of Charles T. Barney on the northeast corner of Thirty-eighth Street and Park Avenue was protected last evening with shores, anchored, wedged and seated in the masonry of the contour façade and the Thirty-eighth Street corner, so that no subterranean settling along the line of the Rapid Transit Tunnel could interfere with its safety.

"I do not care to talk on the subject," said Mr. Barney. "What has been done out there is not wholly precautionary. It was done on an official notice served on me by the Department of Buildings that my house was unsafe."

"Read your own newspaper," said William Barclay Parsons, Chief Engineer of the Rapid Transit system, "if you want to know about Mr. Barney's house and the houses of his neighbors. THE TIMES published this morning a nice, accurate and adequate account of the condition of affairs in the neighborhood of the east side of Park Avenue and Thirty-eighth Street, and it is useless to go outside of it. I am certainly not going to add fuel to the flames of exaggeration. I have just come from there. Mr. Barney's house is not going to fall down, or any house near it. It is not necessary, I repeat, for me to give THE TIMES story over again."

Canavan Brothers, who attend to demolitions, wreck wrecking, and shoring for the city departments, did the shoring yesterday, putting five shores against the Barney house and two shores against the next house, 69 Park Avenue, occupied by George H. Bird, and two more against 71 Park Avenue, occupied by H. H. Robbins. The work was done under the supervision of Inspector Black of the Building Department.

Superintendent Percy M. Stewart of this department was on the ground in the course of the day. He said that while he did not anticipate any serious results he was not going to take any risk on the information that came to him from his subordinates and from experts consulted by the house owners. It was better to take precaution in time, he said, and with what had been done and what was in progress an accident would be almost impossible.

Thomas Brown, Mr. Barney's Superintendent, said that he watched the banker's house until Thursday night, when evidences of settling became so plain that he told Mr. Barney that he would not "stand for it" any longer. Mr. Barney consulted his engineer, A. H. Tyson, and upon the opinion of a consulting engineer of the Subway, that he would do right in taking precautions. Then the Building Department was communicated with, the inspectors made an examination, and the unsafe building order was served.

Mr. Brown said that no course to follow the shoring up had been determined on and nothing might be done for several days. The stone railing which runs just over the east wall of the east tunnel has sunk one inch, and there were other indications of settling inside and outside of the house.

Several experts who went to look at the Barney house yesterday said that the line of disintegration of the rock which crumbled last Summer, partly cracking 57 to 59 Park Avenue, has continued past Mr. Barney's house, and that although the tunnel is finished and repaired, the conditions of it would have to be examined and treated by experts.

Nothing serious has yet been reported in regard to the Huntington property on the southeast corner of Thirty-eighth Street and Park Avenue. It is a boarding house, and the woman who conducts it is nervous because of the shoring up of the Barney house opposite, and says counsel of policemen and Building Department officials.

FIFTH AVENUE HOTEL LEASED.

Amen Corner Relieved at the Renewal of the Contract of Hitchcock, Darling & Co.

The Fifth Avenue Hotel is not to be razed to make way for a "skyscraper" or any other kind of a building, and there is happiness among those who have so long made the hostlery their home, and especially is this true of the "Amen Corner." At 4 o'clock yesterday afternoon Hitchcock, Darling & Co. signed a new lease, to run for five years from Aug. 1, 1903. While the terms are not made public, the understanding is that the terms are practically the same as now prevail, $30,000 a year, the taxes, water rents, and ordinary repairs. It is understood that all of the subtenants will continue to occupy the store and offices. Many improvements will be made to the hotel, including the installation of many additional bathrooms.

Few hotels have so notable a history as the Fifth Avenue Hotel. For many years it has borne a conspicuous part in the public life of the metropolis. Opened in 1859, it was the temporary home of King Edward VII., then the Prince of Wales, the following year, and since that time there has been almost a procession of distinguished men of this and other countries in its corridors.

John Daniell Sons & Sons

Will Offer This Week in the

Ladies' Suit Department (2d floor)

New Spring Models

in Grays, Browns, Blues and Oxford; tucked blouse, with postillion back, trimmed with braid; plaited skirt with silk drop; value $30.00, for this sale..... $23.50

MR. QUAY GAINS A POINT

Statehood Bill Now a "Rider" on the Agricultural Bill.

The Senate Thus Will Be Forced to Vote on the Measure—Opponents Still Determined.

Special to The New York Times.

WASHINGTON, Jan. 31.—Senator Quay forced the fighting on the Statehood bill to-day. Should he fail now it will not be because he has not labored with the shrewdness of a veteran in legislative manipulation. Events are beginning to show with what extraordinary cunning he has laid his plans.

Mr. Quay is strengthening his purpose to push the measure through as a "rider" on an appropriation bill. He offered the amendment to both the Agricultural and the Sundry Civil bill. He gained an important point to-day when the Senate Committee on Agriculture placed the amendment to admit the three Territories to Statehood on the Agricultural bill. Because of this piece of strategy when the bill is reported favorably the amendment will come before the Senate for action.

When it is reached in the consideration of the bill it will be in order for some Senator to raise the question whether the amendment is relevant. Under the rule this question must be submitted by the chair and be decided without debate by the Senate. President Frye could not rule against the amendment when presented by the committee in this way. It must come to a vote. The belief is prevalent that the decisive vote will come next week.

There has been a great outcry against admitting States by means of "riders" on appropriation bills. It has never been done; many other important measures, however, have gone through this way, including the Spooner amendment conferring quasi civil government on the Philippines, and the Platt amendment, exacting certain concessions from Cuba.

When the Spooner amendment was reached in the Army bill in the last Congress Senator Pettus of Alabama raised the point of irrelevancy, and President Frye promptly submitted it to the Senate, which by 38 to 23 decided that the amendment was relevant.

Oklahoma was originally opened to settlement by an amendment placed on the Indian appropriation bill. In the same way the "Free Homes" bill was put on an Indian appropriation bill. There are already two "riders" on the Army bill for this session—the Army Staff bill and the bill with regard to army retirements.

Though the chances are all against him, Senator Quay is playing his hand well. He and his associates have even gone over to the House and ascertained what the result would be there if they should be successful in the Senate.

Under the House rules the amendment coming from the Senate would be referred to the Committee of the Whole at once. By that course the friends of Statehood would have little to fear. The Speaker, however, has power to refer an appropriation bill with objectionable amendments to the committee having jurisdiction of the appropriation, and so the Agricultural bill, with the Statehood amendment, might be referred to the Agricultural Committee.

The Quay men have polled the House Committee on Agriculture and say it stands 10 to 7 for the Statehood bill.

It has been suggested that if Mr. Quay gets the Statehood bill through as a part of the Agriculture bill he will be defeated in conference. Here again his cunning has shown itself. The conferees on the Agricultural bill would be Senators Proctor, Hansbrough, Dolliver, Burkett, Gibson and Taylor. The two latter are Statehood supporters, and constituting a majority of the Senate conferees, would see to it that the amendment was insisted on. Thus at every point the Pennsylvania Senator has presented an awkward situation for his foes to confront.

The opponents of Statehood say they will discuss the Agriculture bill as fully as they have the bill admitting the three Territories, and will defeat it just as they have determined to defeat the original bill. To this Senator Quay replies that he will put his Statehood amendment on all the appropriation bills if that course is necessary, with the possible exception of the General Deficiency and the Legislature bills. He thinks that he will not be obliged to do this.

BETTER OUTLOOK FOR CANAL.

Senator Morgan Indicates That He Will Not Attempt to Delay the Treaty in the Senate.

Special to The New York Times.

WASHINGTON, Jan. 31.—There is a good prospect that action will be taken on the Panama Canal treaty in the Senate Committee on Foreign Relations.

The outlook for its ratification was much improved to-day when Senator Morgan gave the committee to understand that in his opposition he was not actuated by a desire to defeat action on the treaty, but simply wanted to protect the interests of the United States and to guard against emergencies that he feared would arise unless amendments were adopted. He declared that his main purpose was to place himself on record in connection with this important work, and having done that he would not interpose opposition to action by the committee or the Senate.

Mr. Morgan to-day made further argument in favor of the adoption of his resolution requesting the President to furnish the Senate with certain information in connection with the status of the Colombian Charges d'Affaires. The committee, however, voted against reporting it. Subsequently the committee rejected several amendments proposed by Mr. Morgan.

A meeting will be held on Monday, when it is expected Mr. Morgan will complete his programme of opposition. In that event a vote will be reached, and there is no doubt that it will result in ordering a favorable report to the Senate.

Members of the committee say that there is considerable force in some of the amendments proposed by Mr. Morgan. Any amendment made to the pending treaty, however, would send it back to Bogota for concurrence, and thus delay final action. Moreover, the objections raised are not so important as to warrant action that would require the negotiation of another treaty.

Senator Cullom conferred to-day with Secretary Hay in regard to the amendments proposed by Mr. Morgan, and which may reappear when the treaty reaches the Senate. Secretary Hay does not think the apprehension of Senator Morgan is well founded, and urged that the treaty be ratified as received from the President. He assured Senator Cullom that seven interests of the United States was safeguarded, and that any attempt at this time would imperil and perhaps defeat the construction of the canal for some time.

MR. PEDRERA'S LOST CARABAO.

Case of Philippine Draft Animal, of Disputed Sex, Now Before Congress in a Plea for $100.

Special to The New York Times.

WASHINGTON, Jan. 31.—Secretary Root has forwarded to Congress the claim of Julian Pedrera y Roman of Bacolod, and the papers in the case have been referred to the Committee on War Claims. They were printed to-day. It is not often that a claim for the modest sum of $100 calls forth such wealth of language as has been expended in the documents in this case.

On May 15, 1902, the Signal Corps, represented in the person of Private H. A. Wise, hired from Mr. Pedrera a carabao and cart to transport telegraphic material to the north of Negros at $1 a day. In addition, "solely out of friendship for the Signal Corps and other departments of the Army," as is stated in the papers, Mr. Pedrera loaned the Signal Corps an animal concerning the sex of which there is much dispute. Pedrera says it was a bull and Wise says it was a cow, but as Wise's report is made in Spanish, a language with which he was unfamiliar, there is much doubt about it. The values of a bull and a cow are widely different in the Philippines.

Wise lost this animal and thereby brought Pedrera to the verge of ruin. In a letter to Gov. Taft Pedrera thus describes his condition:

> To such a state has my situation reached that I have petitioned by brother's in Cuba, of which place I am a son. I have begged them and have pleaded of the new government that I might obtain of the same the payment of my passage and that of my daughters, to Cuba, the answer to which I am expecting on every mail that comes from America, from one moment to another.
>
> This should have been already settled; but the judge of this place uses much tranquillity in the giving of judgment, but not so much in affairs whose proofs are so clear and forcible as in my case; so that it is true that if he had been an American judge it would be now settled; and as would naturally follow myself and my daughters would now be in Cuba.
>
> I have been thirty one years in the Philippines, and have passed through many labors, and when I was counting upon being able to raise my head the unfortunate revolution came and ruined me.
>
> I terminate this reminder to your excellenxy, praying that you will please to order, that whoever it may concern shall settle the vexatious affair, which, as your excellency may believe, if I make a claim therefor to the United States Government, it is caused by the horrible crisis which I am passing, because, although an European, I find myself reduced to eating like the most miserable Indian, and worse still, I, though an European, see myself obliged to make a showing which my strength will not permit, nor my 61 years of age.
>
> I beg of your excellency to pardon a poor father of a family the many grievances, which, as I have said, are the children of the necessity so great to which we see ourselves reduced.
>
> And awaiting your most lofty action, and making fervent prayers to the Almighty for your excellency and the United States of which your excellency is the most worthy representative, there remains at your orders your most affectionate and attentive servant, who kisses your hand. JULIAN PEDRERA y ROMAN.

Wise, it seems, got the mysterious animal up to the coast, where it lay down. The tide was coming in, and Wise could not get the "vacco," as he calls it, to get up. With greta presence of mind he hired a native to watch the animal and went away. When he came back the native and vacco had disappeared, and the tide hd gone out.

The indorsements in the case cover thirteen closely printed pages. In one of them Capt. B. H. Wells of the Twenty-ninth Infantry thus discusses the creature's sex.

> As regards the sex of the animal, Private Wise, in his affidavit, describes the same as a bull. In his receipt to Mr. Pedefra he uses the word "vacco," probably meaning "vaca," a word applied quite generally to draft animals. And if he did not mean "vaca," perhaps he meant to indicate the masculine gender by changing the feminine "a" into the masculine "o." His enthusiasm to speak Spanish would account for the superfluous "c."

RED, WHITE, AND BLUE HOTEL.

Montana Man Makes a Suggestion for a Patriotic Hostelry in Washington.

Special to The New York Times.

WASHINGTON, Jan. 31.—The District Commissioners had a good deal of fun today over a suggestion that comes all the way from Kalispel, Montana, in regard to a new hotel for Washington. As an evidence of good faith the writer sent his photograph, and, in order that his idea should not be lost entirely, he duplicated his communication to the President.

The suggestion is that the Government erect a aNtional hotel in Washington, to cover a whole block, and with each side so constructed of red, white, and blue bricks as to look like a huge aNtional flag. To increase the realism of the scheme, the author proposes that the outline as shown in brick should be wavy, as if the flag were tossed in the breeze. He wants the hotel to be a skyscraper, so it can be seen from a long distance, as the people of the country ride into the capital on the cars. The caravansary is to be for politicians chiefly, and there is to be a large convention hall, with capacious cloakrooms, in which politicians by thousands may pull wires. The furniture is all to be upholstered in red, white, and blue. The proprietor is to be required by law to maintain a large band, that shall rival the famous Marine Band, and play patriotic tunes constantly day and night. "Marching Through Georgia" is mentioned as one of the tunes that must be played every day at all hazards. The Montana man says he believes the time is coming when Canada and Mexico will be annexed, and provision must be made in the hotel for the people of those countries.

It is assumed that the originator of the plan is a Prohibitionist, as there is no barroom in the plans, and no mention is made of one in the description. It has been proposed that the idea be turned over to the Senate Park Commission, to be incorporated in the plans of that body for the improvement of Washington.

WASHINGTON SHOPMEN UNITE.

Prepare to Fight Stewards Who Levy Tribute on Penalty of Transferring Employers' Custom.

Special to The New York Times.

WASHINGTON, Jan. 31.—For many years it has been notorious in Washington that the stewards for wealthy householders were in the habit of exacting from butchers and other tradesfolk a commission on the business they took to them. In that way there developed gradually a custom, and the stewards came to regard their gifts from the persons from whom they bought supplies as a part of their legitimate income.

To rid themselves of the necessity of paying this tribute the dealers have organized a society, which is preparing a plan behind closed doors to wage warfare against the stewards. It is proposed to work in the name of the association and directly with employers. The dealers are making up statements of facts with regard to each individual steward who has been a claimant for pay, and these will be laid before the employers particularly interested, in the hope that they will co-operate to destroy the practice.

IMMIGRATION BILL COMPROMISE

Educational Test Clause Objected to by Hawaii Dropped and Senate Will Pass the Measure.

Special to The New York Times.

WASHINGTON, Jan. 31.—As a result of a compromise the Immigration bill is to be brought before the Senate next week and passed. It has been held up by reason of the vigorous fight, made principally by the Hawaiians, against the educational test clause. Hawaii asserts that the adoption of such a clause would mean ruin there. In the production of sugar in the Territory Japanese laborers are employed to a great extent, constituting a large majority of the workers. It is said that the educational clause would keep out 150,000 laborers every year.

The clause objected to requires every alien applying for admission to this country to be able to read twenty-five words of the Constitution. Senators Gallinger, Foraker, and Elkins have been the leading opponents of the bill. This morning it was agreed that the educational test should be dropped from the bill, and the opponents of the bill will let it pass.

NOMINATED BY THE PRESIDENT.

WASHINGTON, Jan. 31.—The President to-day sent these nominations to the Senate:

Assistant Treasurers of the United States—William S. Leib at Philadelphia, George A. Marden at Boston.

Collectors of Customs—John M. Holzendorf, District of Saint Mary's, Georgia; John Rester, District of Tappahannock, Virginia.

Surveys of Customs—Jeremiah J. McCarthy, District of Boston and Charlestown, Mass.; Charles H. Senseney, port of Wheeling, West Virginia.

Collector of Internal Revenue—Peter C. Garrick, Twenty-first District of New York.

Consul—William H. Bishop, Connecticut, at Genoa.

Navy—Reason E. Riggs, South Carolina, to be assistant surgeon; Commander C. C. Cornwell to be Captain; Pay Inspectors S. S. Calhoun and John N. Speel to be pay directors; Midshipmen J. A. Furer, William B. Fogarty, S. M. Henry, and L. L. McBride to be assistant naval constructors.

NEW HAVEN, Conn., Jan. 31.—William H. Bishop, who has been appointed Consul at Genoa, is a well-known novelist. He was formerly Professor of Italian and Spanish literature in Yale University, but resigned that position last year. He is now in Italy.

PROCEEDINGS IN CONGRESS

Nation Accepts Statues of Charles Carroll and John Hanson.

Speeches in Senate and House on the Lives of the Distinguished Marylanders—Bills Passed.

WASHINGTON, Jan. 31.—The greater part of the time of the Senate to-day was devoted to exercises in connection with the acceptance from the State of Maryland of statues of Charles Carroll and John Hanson, which henceforth will stand in Statuary Hall at the National Capitol. Several bills were passed, including the House bill providing for the creation of a general staff of the army. The Statehood bill was not considered, but it holds its place on the calendar.

The Chaplain in his invocation again feelingly referred to the death of Senator McMillan of Michigan. "Sweet memories mingle with this morning," he said. "Word of honest and sincere praise and honor have been uttered to one who, dying, has left with us the undying example of a noble life which will still echo in these halls."

On motion of Mr. McComas unanimous consent was given for the members of the Maryland commission, having in charge the erection of the statues, to occupy seats on the floor of the Senate. Mr. McComas also offered a resolution tendering the thanks of Congres sto the State of Maryland for presenting the statues. Other speakers were Messrs. Dolliver, Wellington, Depew, and Hoar.

The delivery of the eulogies required almost hree hours. The galleries were well filled, largely by residents of Maryland, while Senator-elect Gorman sat with the Maryland committee. The speakers were liberally applauded.

Mr. McComas spoke at length on the services of the two men whose memories were being so signally honored, but dwelt especially upon the career of John Hanson, who as President of the Continental Congress had, he said, performed invaluable services to the entire country.

Mr. Hoar took occasion in the course of his remarks to refer to the fact that Carroll had been in religion a Catholic, and in that connection spoke of the tolerance of the people of that faith.

Mr. Dolliver told of a recent inspection of the original manuscript of the Declaration of Independence, and said he had found all the signatures to it had practically faded away, including that of Carroll. This circumstance, he considered significant, for that memorable document, after all, owed its origin to all the people and not alone to the few whose names were attached to it.

Mr. Depew referred to the fact that public men of the colonies of the Revolutionary period were without experience as diplomats, but he declared their accomplishments in that line never had been paralleled. Referring to the fact that John Hanson had passed out of mind, Mr. Depew said the time had come when the only persons connected with our civil war who would be remembered were Lincoln, Grant, and Lee.

Mr. Bacon supplied the place of Mr. Daniel, who had been requested to speak. He said that not only now, but at all times, had the people of the Southern States which were included in the thirteen colonies been loyal to the principles enunciated by the Declaration of Independence. He suggested that in addition to Statuary Hall there should be a "Hall for the Immortals," and said that such a hall should contain statues of all the framers and signers of the Declaration of Independence.

Mr. Wellington closed the exercises, saying that never before had Maryland been worthily represented by her sons, the honor that had been bestowed upon Hanson and Carroll in selecting them above all others for this distinction had been wisely and well given.

At the end of Mr. Wellington's address resolutions of acceptance were adopted.

The Rawlins resolution calling on the Secretary of War for information regarding courts-martial in the Philippines was laid before the eSnate, but it again went over.

A House bill was passed appropriating $3,850 for the improvement and care of "Confederate Mound" in Oakwoods Cemetery, Chicago.

A bill was passed to provide for the removal of persons accused of crime to and from the Philippine Islands for trial. The bill has special reference to the extraditing of fugitives from justice. It originally included the Islands of Guam, Tutuilla, and Manila, but on objection by Mr. Hoar it was amended so as to include only the Philippine Islands.

Bills also were passed appropriating $282,948 for the payment of overtime claims of letter-carriers excluded from judgment as barred by limitation, to exempt from taxation certain property of the Daughters of the American Revolution in Washington, authorizing the President to detail officers of the revenue cutter service as superintendents or instructors in the public marine schools, and conferring jurisdiction on the Court of Claims to determine all claims of the confederated bands of Ute Indians of Colorado; also a number of private bills.

In the House, after the two hours of general debate upon the Post Office Appropriation bill, which was made notable by a speech in favor of tariff reform by Mr. Williams of Mississippi, who is a candidate for the Democratic leadership of the next House, the House suspended public business and listened to three addresses by Mr. Pearre of Maryland, Mr. Dalzell of Pennsylvania, and Mr. Schirm of Maryland, on the life and public services of Carroll and Hanson. Resolutions were adopted formally accepting the statues on behalf of the Government.

Gen. Grosvenor of Ohio presided during these exercises, and many Marylanders were in the galleries, two sections of which had been specially reserved for their accommodation.

The death of the late Representative Rumple of Iowa, which occurred this morning, in Chicago, was announced, the usual resolutions were adopted, and a committee was appointed to attend the funeral. Then, as a further mark of respect, the House adjourned until to-morrow, when a memorial session will be held to pay tribute to the late Senator McMillan of Michigan.

NEW "LILY WHITE" MOVE.

Senator Pritchard Withdraws the Bartender and Suggests a Physician for Wilson's Postmaster.

Special to The New York Times.

WASHINGTON, Jan. 31.—Senator Pritchard of North Carolina to-day made a new move in his fight for the recognition of the "Lily White" organization. The wind has shifted somewhat toward his direction and there is an impression now that he may win his test fight over the Postmastership at Wilson, N. C., where he is trying to oust the colored incumbent, Samuel H. Vick.

Mr. Pritchard to-day took down his Populist and bartending candidate for the Postmastership, A. B. Boykin, and placed before the President the name of Dr. B. T. Person, a Wilson physician, and formerly a member of the State Legislature. Dr. Persen was formerly a Populist, but is a Republican now. A good many of the white men who are serving as the nucleus of the "Lily Whites" in the South formerly were Populists.

It is a curious fact that at the same interview at which Mr. Pritchard presented Dr. Persons name he renewed the recommended man, Capt. D. J. Gilmer of Grinsboro, N. C., for appointment to a commission in the Philippines scouts. Gilmer was a Captain in the Forty-ninth Infantry and served in the Philippines. The "Lily Whites" explain this sort of thing by saying that they are not against the negroes, and are really the friends of the colored race; what they want is to build up a "respectable" Republican Party in the South by dividing the white vote, which cannot be done as long as the negroes run the party there.

Reciprocity Includes Porto Rico.

WASHINGTON, Jan. 31.—Secretary Hay and M. de Margerie, the French Charge, to-day signed an agreement extending to Porto Rico the provisions of the French reciprocity arrangement drawn under Section 3 of the Dingley Act. This will admit French still wines, argols, and works of art to Porto Rico under preferential rates of duty.

Le Boutillier Brothers

HOUSEKEEPING LINENS.

Fine hemstitched and Embroidered pieces at a Great Sacrifice—including Bedspreads, Sheets, Pillow Cases, Shams, Scarfs, Lunch Cloths, Tea Cloths, Tray Cloths, Doylies, etc.

N. B.—Our stock of Linen Suitings is now complete and includes the latest imported novelties in Batistes, Grenadines, Crashes, Duck, Homespuns, Canvas Weaves, etc.

Le Boutillier Brothers

West Twenty-third Street.

TOBACCO TRUST OPPOSED.

Six of Principal Havana Factories Agree Not to Sell Within Ten Years.

HAVANA, Jan. 31.—Six of the principal independent cigar factories have now entered into the agreement not to sell their brands or plants to anybody for ten years, under a penalty of $200,000. Two other firms, among the largest independent concerns, have not signed, owing to the fact that under the wills of their founders they are not permitted to transfer the businesses, except to the owners' legal heirs. The large independent firms number a dozen, and there are a score or so of smaller firms.

There have been no definite results yet from the conference of American retailers and others with the independents with referends to the American trade.

WANT NO GOVERNMENT DREDGE.

Great Lakes Interests Fear Conflict with Their Industry.

WASHINGTON, Jan. 31.—Prominent men of Buffalo, Cleveland, Chicago, Milwaukee, Detroit, Saginaw, and Sault Ste. Marie, accompanied by members of Congress representing States bordering on the great lakes, protested to the President to-day against Government construction of dredges for the lakes.

By the last River and Harbor bill the Secretary of War was authorized to purchase or to have constructed a large dredge for Government use on Lake Erie, an appropriation of $175,000 being made for the purpose. The provision was placed in the act because the prices charged by the private dredging interests for their work were regarded as exorbitant. The delegation informed the President that if the Government went into the dredging business their interests would be sacrificed.

After hearing an argument by Senator Quarles, the President directed that the matter be presented to the Secretary of War. The delegation then called upon Secretary Root, and he took the matter under advisement.

YOUNG MURDERERS SENTENCED.

Pennsylvania Judge Regrets That the Maximum Punishment is 20 Years.

LANCASTER, Penn., Jan. 31.—Clarence McCoy and William Guterman, the two Columbia (Penn.) youths convicted of murder in the second degree, to-day received the maximum sentence of twenty years imprisonment. Judge Landis said he was sorry he could not make the punishment more severe.

The prisoners are each twenty years old, and the crime for which they were convicted was the murder of Jacob H. Bostick, a track walker on the Pennsylvania Railroad. After shooting and beating him over the head, the murderers placed the body on the track, expecting that a train would run over it and hide the evidence of murder. The body was discovered a few minutes before the passage of a train.

DEPARTMENT STORE IS BURNED.

Fireman Killed at Weinstock, Lubin & Co.'s Establishment in Sacramento.

SACRAMENTO, Cal., Jan. 31.—The department store of Weinstock, Lubin & Co. was destroyed by fire this morning. Frank Kasebolt, a fireman, was killed by a falling wall. Albert Pritchard's back was broken, and he will die. Several other persons were badly injured.

Col. Weinstock and the company's Directors have decided to rebuild at once. About 400 persons are thrown out of employment. The total loss is probably $500,000, with insurance of $300,000. The building was a four-story brick and cement structure, and covered a large area.

CAPT. CUSHING FOUND GUILTY.

Revenue Service Officer to be Put on Half Pay for Six Months.

WASHINGTON, Jan. 31.—The board which conducted the trial in San Francisco of Capt. William H. Cushing of the revenue cutter service on charges based upon a report submitted by the Surveyor of Customs of the Port of San Francisco has filed its report with the Secretary of the Treasury.

The board decided that eleven of the charges were proved in part, and recommended that Capt. Cushing be placed on leave of absence on half pay for a period of six months and receive an official reprimand. That recommendation has been approved by the department, and the necessary orders carrying it into effect have been issued.

FORMALIN SAVES PATIENT.

Springfield Physician Uses the New Treatment with Success.

SPRINGFIELD, Mass., Jan. 31.—Dr. J. H. Carmichael of this city this morning formally announced the success of the use of the new formalin treatment for blood poisoning on a case operated upon five days ago and this morning pronounced out of danger.

Dr. Carmichael's patient was in a critical condition from peritonitis, and on Jan. 26 was almost in extremis. The pulse was 160, and the patient was in a comatose condition. A solution of formalin, 1 in 5,000 was used, and before the end of the operation the pulse had dropped to 120 and was firm and strong. In twelve hours the pulse was almost normal, and this morning the patient took nourishment.

Brooklyn Man Killed by a Train.

The body of James H. Easop, forty-two years old, of 907 Dean Street, Brooklyn, badly mangled, was found by a policeman early yesterday morning on the track of the Brighton Beach division of the Kings County Elevated Railroad, at Franklin Avenue and Prospect Place. The man had been run over and killed by a train. It is supposed that he was trying to cross the track in front of the train when he was struck. Easop was employed as a telegraph operator in the Produce Exchange.

A Republican Club Entertainment.

The Central Republican Club of the Thirty-first Assembly District, of which Tax Commissioner Samuel Strasbourger is the Republican leader, will hold its annual entertainment and reception at the New Harlem Casino, One Hundred and Twenty-fourth Street and Seventh Avenue, on Friday evening next.

Vogel Brothers' Employes' Ball.

The society of employes of Vogel Brothers will hold its annual ball and entertainment at Terrace Garden on Wednesday evening, Feb. 4. There will be a vaudeville entertainment at 8:30, to last until 11 o'clock, when dancing will begin.

Gov. Taft Pardons Labor Leader.

MANILA, Jan. 31.—Gov. Taft has pardoned Isabelo de los Aeyes, the Filipino labor leader, vonicted of conspiracy and threats of violence under the Spanish law forbidding combinations to enhance the price of labor. The Governor took the ground that the law is un-American.

Philippine Tax Penalties Remitted.

MANILA, Jan. 31.—The Philippine Government has extended the time for the payment of the land tax and has remitted the penalties for failure to pay in seven impoverished provinces.

Machias Arrives at the Azores.

FAYAL, Azores, Jan. 31.—The United States gunboat Machias has arrived here from Bermuda.

THE UNITED SERVICE.

Army.

Capt. William R. Smith, Artillery Corps, will report to the Superintendent, United States Military Academy, for assignment to duty at the academy.

By direction of the Secretary of War the following assignment to regiments of officers recently promoted are announced:

Lieut. Edward A. Godwin is assigned to the Ninth Cavalry vice Swigert, promoted.

A Board of Officers is appointed to meet at Fort Myer, Va., for the examination of officers to determine their fitness for promotion. Detail: Col. Eli L. Huggins and Major Walter S. Schuyler, Second Cavalry; Major James D. Glennan, Surgeon; Major Eaton A. Edwards, Twenty-third Infantry; First Lieut. Wilfrid Turnbull, Assistant Surgeon; Second Lieut. Chas. G. Harvey, Second Cavalry; Recorder.

The following named officers will report to Col. Eli L. Huggins for examination to determine their fitness for promotion at the places of residence of them or their other:

Capt. Hugh L. Scott, Seventh Cavalry; Capt. Lewis H. Strother, Twenty-second Infantry.

Col. Samuel M. Swigert, Fifth Cavalry, having been found incapacitated for active service on account of disability incident thereto, is placed on the retired list.

Capt. Leonard D. Wildman, Signal Corps, will proceed to New York on official business pertaining to the Signal Corps.

The resignation of Cadet St. Clair Newburn, fourth class, Military Academy, is accepted.

Navy.

Lieut. R. H. Osborn is granted six months' sick leave.

Movements of Naval Vessels.

Special to The New York Times.

Washington, Jan. 31.—Arrivals—Marietta at Cuxcos, Puritan at Yorktown; Alert at San Francisco; Chicago and Cincinnati at Algiers; Machias at Horta, Azores; Montgomery at Bahia.

Sailings—Texas, for Culebra; Essex, for Fredericksted, Santa Cruz.

Horner's Furniture

ALL WOOL SMYRNA RUGS
Just arrived—all the new Spring colors and designs

ANOTHER "RING" CYCLE.

Wagner's "Nibelung" Trilogy to be Given at Popular Prices.

The success which attended the recent cycle of "Der Ring des Nibelungen" at the Metropolitan Opera House was so decided that, in answer to numerous requests which have reached it, the management has arranged to give an extra cycle of Richard Wagner's great music-drama during February.

In order to allow the largest possible number of music lovers to attend the four performances of the works in "Der Ring," special and popular prices will be charged. The dates and casts announced for this cycle are as follows:

Thursday Evening, Feb. 19, at 8:30.
"DAS RHEINGOLD."

Fricka ..... Mme. Reuss-Belce
Freia ..... Miss Maryllt
Erda ..... Mme. Schumann-Heink
Woglinde } Rhein-töchter { Mme. Fritsi Scheff
Wellgunde } Rhein-töchter { Miss Carrie Bridewell
Floßhilde } Rhein-töchter { Mme. Schumann-Heink
Loge ..... Mr. Anthes
Wotan ..... Mr. Van Rooy
Donner ..... Mr. Muhlmann
Froh ..... Mr. Bars
Alberich ..... Mr. David Bispham
Mime ..... Mr. Reiss
Fasolt ..... Mr. Blass
Fafner ..... Mr. Kimblad

Saturday Evening, Feb. 21, at 7:30.
"DIE WALKUERE."

Sieglinde ..... Mme. Gadski
Fricka ..... Mme. Reuss-Belce
Gerhilde ..... Mme. Van Cauteren
Ortlinde ..... Miss Bauermeister
Waltraute ..... Mme. Maurer
Schwertleite ..... Mme. Louise Homer
Helmwige ..... Mme. Fritzi Scheff
Siegrune ..... Miss Marylll
Grimgerde ..... Mme. Seygard
Rossweise ..... Miss Carrie Bridewell

Wellgunde ..... Miss Carrie Bridewell
Floßhilde ..... Mme. Louise Homer
Siegfried ..... Mr. Burgstaller
Hagen ..... Mr. Blass
Gunther ..... Mr. Muhlmann
Alberich ..... Mr. David Bispham

MRS. HADDEN ALEXANDER'S RECITAL.

Mrs. Hadden Alexander, a local pianist who gave a pianoforte recital in Mendelssohn Hall a season or two ago, gave another yesterday afternoon that was attended by a large, friendly, and patient audience. Considerable patience is requisite in an audience that listens to Mrs. Hadden Alexander's public performance until she gets through the weightier parts of her programme and down to the lesser pieces that are more nearly within her grasp. Tausig's arrangement of Bach's toccata and fugue in D minor and Schumann's fantasia in C are quite beyond her, both in their technical requirements and in their demands upon the intellect and the emotional sensibilities. A more inadequate performance of Schumann's fantasia, it is safe to say, has not been heard in public here. It is a piece for an artist with highly developed strength and technical powers and a big, broad style, none of which are possessed by Mrs. Hadden Alexander.

The programme contained six little piano pieces by Prof. E. A. MacDowell, most of them from his later published collections, with fanciful titles, illustrating, or illustrated by, verses of his own: "The Joy of Autumn," "From a Wandering Iceberg," "In Deep Woods," "To a Water Lily"; one was from an earlier work, "Idyl," after verses by Goethe, and one was his polonaise, op. 46. They showed Mrs. Hadden Alexander's playing in a more agreeable light than her more ambitious attempts, and were an interesting addition to the music publicly heard this season. They are highly unconventional and highly characteristic of Prof. MacDowell's manner, which seems in these days to be approaching dangerously near to mannerism. In many of them it is difficult to distinguish any thematic structure at all, and the music seems to be purely an attempt at harmonic color, a succession of harmonic progressions of a strangeness sometimes crabbed. As to their power of depicting the sentiment of the verses to which they are attached, it would be best not to inquire too closely; and indeed, there is a strange family resemblance, for instance, between the iceberg and the deep woods as they appear in this music.

AT THE OPERA.

Owing to the indisposition of Mme. Eames, which seems likely to continue for some little time longer, the management of the Opera House has engaged Mme. Suzanne Adams to take some of the parts that have usually been allotted to her. Yesterday this new addition to the company appeared as the heroine in Gounod's opera of "Roméo et Juliette." Mme. Adams is no stranger to the Opera House, and has sung there many times in previous seasons in this opera as well as in others; so that her reappearance raised no doubts in the minds of any of the habitual frequenters of the Opera House. She has a beautiful voice, she knows the stage, and her presence upon it is always a delight to the eye as well as to the ear. As Juliet she presents a beautiful picture, and she enacts the part with grace, tenderness, and with no little passion and power. She was in good voice yesterday afternoon. The Romeo was Mr. Alvarez, who is a most vehement and intensely earnest lover, and who makes the love scenes something akin to fearful tragedy, in vocal expression as well as in action. The other members of the cast were familiar in their impersonations of their roles, and the performance was in many ways enjoyable.

In the evening a performance of "Aida" was given at popular prices that filled the upper galleries of the house as full as they have been seen this season. It was a performance that exhibited most of the excellences that have been noted in the numerous earlier repetitions of the work this season, for, with the exception of Mr. Mühlmann, who was the King, the singers have all appeared before in these parts—Mme. Gadski as Aida, Mme. Homer as Amneris, Mr. De Marchi as Radames, Mr. Campanari as Amonasro, and Mr. Journet as Ramfis.

MUSIC AND MUSICIANS.

Mr. Henry Wolfsohn announces that Fannie Bloomfield-Zeisler will give her only piano recital of the season in Mendelssohn Hall on Tuesday afternoon, Feb. 24.

***

Miss Mary Colden Tracy and M. Charles Gilbert of the Metropolitan Opera company will give a song recital in Mendelssohn Hall on the afternoon of Feb. 27.

***

Ellison Van Hoose, the well-known tenor, is about to forsake the concert stage for the operatic. For several years he has received offers from the managers of some of the leading opera houses in Germany, all of which he has declined. The management of the Stadt Theater in Bremen has made him an offer, and he has accepted. He will leave New York for Europe in April, going direct to Paris, where he will study repertoire with Koenig of the Paris Grand Opera, until it is time for him to make his debut, which will be in September. Mr. Higgins of Covent Garden made him an offer last Summer to sing there this Spring, but he refused; he repeated the offer for the season of 1904, and it is now possible that Mr. Van Hoose will accept it.

***

A popular concert is to be given in Carnegie Hall on Sunday evening, March 1, in which a number of well-known artists are to assist. This occasion will also be the first appearance of Mr. Edward Ritt, pianist, who has received his entire education in this country.

***

After Kocian's appearance at the Metropolitan Opera House, New York, to-night, the young violinist will perform in the principal cities of the South, including Memphis, Montgomery, Richmond, Birmingham, Atlanta, Nashville, and New Orleans, and then in Omaha, Denver, and San Francisco, where he is booked to appear for the first time on March 2.

***

Ossip Gabrilowitsch, the Russian pianist, is touring the West and Northwest under Mr. Daniel Frohman's management, meeting with success, and being a series of recitals and concerts in San Francisco next Monday. He will not return to New York before the middle of March.

***

Miss Helen Niebuhr, contralto, assisted by Mr. Hans Kronold, 'cellist, will give a concert at Knabe Hall on Wednesday evening, Feb. 11. Miss Niebuhr will sing songs of a great variety of styles.

***

The Grand Opéra of Paris is preparing to give the one thousandth performance of Meyerbeer's opera "Les Huguenots," which is to be marked by all the brilliancy at the command of the institution. Besides the splendor of the mounting, it is said that even the small parts are to be taken by artists of distinction.

***

Its Roman correspondent informs The London Globe that the libretto of Mascagni's next opera is awaiting his return home from America, and that he is expected to begin work upon it as soon as he reaches Italy. The subject is said to be taken from the French Revolution, and the opera will be entitled "Marie Antoinette," the unfortunate Queen being the central figure in the action.

***

A recent decision of the Court of the King's Bench Division in London is considered to have practically nullified the effect of the new English law to protect copyright in music. The judges decided that the pirated music that was offered for sale by hawkers on the streets could not be seized and destroyed on the application of the rightful copyright owner without a summons. As the hawkers are all irresponsible people roaming about the streets, and when first caught may give false names and addresses, and as there is no power to detain them for inquiries, it is practically impossible to get hold of them.

***

The famous Philharmonic concerts of Vienna seem to be in a bad way, and the orchestra, which has been widely known as one of the most perfect in all Europe, is steadily losing its patronage. According to the correspondent of the Signale, this is due to the lack of interest aroused by the present director, Joseph Hellmesberger, and to the fact that the tide of fashion is setting another way. Hellmesberger conducts with zeal and devotion, but he suffers by comparison with his predecessors Richter and Mahler. He bears a famous name, but, as the correspondent points out, it was unfortunately not he who made it famous. He has been a violinist, leader of a military band, waltz composer, and finally ballet director of the Imperial Opera, all before the eyes of the Viennese, and it all prevents them from taking him seriously as conductor of the Philharmonic. The concerts, instead of being crowded, are now "papered" to bring out full houses, and the members of the orchestra who, as the correspondent of the Signale observes, are not in the least idealists where their pockets are concerned, are said to have made overtures to Mahler to return to the post of conductor. The Vienna Concertverein, under the direction of Ferdinand Loewe, is gaining the popularity lost by the Philharmonic.

***

Mme. Lehmann has been singing in opera in Vienna, and giving song recitals there. The latter were not well attended; but in the Imperial Opera, where she has appeared in all her old successful parts, she has drawn great crowds of enthusiastic auditors.

***

On the evening of March 3, at the Brooklyn Academy of Music, a chorus of 150 women under the leadership of Mr. A. Huntington Woodman, will give a concert of much musical interest. Mendelssohn's "Midsummer Night's Dream" and Heinrich Hofman's "Song of the Norns" are to be given in their entirety. The Mendelssohn music has not been so given in Brooklyn since the days of Theodore Thomas, and the Hofman music never in Brooklyn.

The chorus will also sing one or two of the interesting trios of Edward Elgar. For soloists on this occasion Mrs. Dorothy Harvey and Mr. David Bispham have already been secured. Mrs. Harvey sings the solos with the chorus, and Mr. Bispham sings with an orchestra accompaniment of forty pieces.

The proceeds of the concert go to the Packer Jubilee Fund, and tickets may be procured at Chandler's on and after Feb. 20, the price being $1.50 and $1. The list of patronesses assures the social success of the event.

***

Robert Planquette, the French composer of "The Chimes of Normandy," who died last week in Paris, never wrote anything else that had the least success. That operetta, however, was one of the most popular of its kind. It ran at the Folly and at the Globe in London for nearly three years. At the time it was produced in Paris in 1877, Planquette was earning four francs a night as pianist in a third rate music hall. He studied at the Conservatory and took a second prize for piano playing. Then he wrote songs and little pieces for the music halls. The following story of Planquette's connection with the operetta is told by The Boston Journal:

"The librettist of 'Les Cloches de Corneville' first showed his book to Hervé, who found the plot too serious and, probably, too decent. There was strong opposition to the unknown Planquette, but the manager was persuaded; three hours after the first interview the opening chorus was written, and on the third day after that the first act was finished; ten days later the operetta was ready. There was angry talk at the dress rehearsal, and there was discussion as to what should be cut out. Suddenly a voice was heard out of the darkness of the hall: 'Cut nothing at all; the piece is all right!' 'And who are you?' asked the manager. 'My name is Bathiot; I am a music publisher, and I know something about these matters. Leave the operetta as it is, and I'll buy the rights for 30,000f., money down.' Nevertheless the piece was not successful at first, but when it went on the road during the Summer season, its popularity was enormous."

***

Saint-Saëns often wrote about Augusta Holmès, the French composer just dead. He is quoted by The Boston Journal as reproaching her for an intense desire to make the hearer forget that she was a woman by her extravagant force, mad indulgence in debauches of brass and big drum. And then he would burst out in rhapsody: "Oh, those evenings at Versailles! The beautiful pythoness was not satisfied with cultivating art and preaching art; she caused it to flourish all about her. As Venus fecundated the world when she knotted her tresses, so Augusta Holmès shook over us her reddish locks, and when she was prodigal with the lightnings of her eyes and the brilliance of her voice, we ran to our pens, our brushes; and works were born, some of which have remained. She had unexpected enthusiasms, incredible fads. One day she had a violent passion for Kali, the East Indian Venus, goddess of love and death. She wrote an opera with Kali for heroine, and she excited us by howling: 'Kali, Kali, implacable goddess!' with furious accompaniment on the piano."

***

As a girl, says the same writer, she was remarkably handsome, with marvelous golden hair, with rich color, a Rubens woman, or rather goddess. She drank deeply of the cup of life. A girl, she learned poetry from Alfred de Vigny; she went to Swiss and German towns to talk with Wagner; she was an intimate friend of Villiers de l'Isle-Adam, Saint-Saëns, Mendès—what musicians, painters, poets did she not know?

***

Wagner's music drama, "Die Meistersinger von Nürnberg," is in preparation at the Metropolitan Opera House, and will be performed there on Monday evening, Feb. 16.

SUIT OVER NEELY'S BONDS.

Federal Judge Decides His Release from Civil Liability by Cuba Frees Sureties.

BALTIMORE, Jan. 31.—Judge Morris, in the United States Court, to-day decided against the Government in a demurrer to a replication in the suit of Martin C. Fosner, former Director General of Posts for the Island of Cuba, against the United States Fidelity and Guaranty Company, surety of Charles F. W. Neely, formerly connected with the Cuban Postal Service.

Neely defaulted for several thousand dollars and the United States Fidelity and Guaranty Company was on his bond for $5,000. It is said that other bonds amounting in the aggregate to $100,000 are involved in the case. The question before the court was whether a release by the Cuban courts released Neely's bond.

There was produced in court the record of a case in which it was declared that since Neely had been proceeded against criminally and had been fined, his civil liability to Cuba had been wiped out. Formal action was taken in the proceedings releasing him from civil liability.

Judge Morris decided that if the Government of Cuba, through its courts, had released Neely from civil liability, the United States Government had no right in its own courts to impeach the decree and sue the bondsmen of Neely. District Attorney John C. Rose appeared for the Government.

While the point seems vital to the case, it is not understood that this decision makes an end of the proceedings.

AMUSEMENTS.

ACTIVITY IN COLLEGE ATHLETICS

Baseball Outlook a Difficult Problem at Princeton—Pennsylvania Runners Preparing for Boston Games—Football Still Being Discussed at Yale — Columbia's Athletic Schedule.

The near approach of the close of the regular Princeton midwinter examinations next Wednesday has turned the attention of the Captains of the baseball and track teams to their work. Both Capt. Pearson and Capt. Horton have been keeping careful watch on likely candidates that they may not be prevented from playing by any failure in their examinations. Capt. Pearson has an especially hard task before him. His team was greatly weakened by the graduation of last June's class and the positions of such hard hitters and excellent fielders as Steinwender, Meier, and Brown must be filled. "Bill" Green, an ex-Captain and regular catcher of last season, will also be missed, for it was under his tutorship that both Underhill and Stevens did such good work in the past two years. It is also rumored that Ralph Davis, last season's football Captain and right fielder on the university nine, will not be on the team again.

While at Andover Davis proved himself a speedy 100-yard and 220-yard runner, and Capt. Horton is making strenuous efforts to get Davis to come out for the track team this Spring. The speedy right fielder would be greatly missed in baseball, for as a timely batter and base stealer he was making a reputation for himself. But with all these places to fill Princeton should turn out a strong team. There is an abundance of material in college, quite a number of whom are veteran substitutes. The freshman class brought in some men who, with a little Varsity coaching, should turn out well. Jones, the third baseman and Captain of last season's Lawrenceville nine, is of Varsity calibre in the infield and is a steady man behind the bat. R. McClave has been substituted at the latter position for two years, but lacks a strong throwing arm, and Jones may go to the position. In the box Princeton is strong far better equipped than any of the other colleges. Stevens and Underhill, especially the former, have shown their worth in the past two years. Besides these two are the younger "Doc" Hillebrand and Dunscombe, both steady men.

Capt. Pearson has decided to try Wells at second base instead of third base this year, and for the early part of the season will give Bard, a freshman from Hyde Park School, a thorough try-out at first base. Amell, last year's infield substitute, will tried at short stop, unless it is decided to move Cosgrave in from the outfield. The third base is the contested corner. Except Jones, there is not a man in college that can fill the place, and it will depend on his showing behind the bat how the field shall be filled. There are plenty of candidates for the outfield. For a while Pearson will go there, and, with Cosgrave and probably Davis, it will not be hard to select a speedy crowd of players. "Doc" Hillebrand will be on hand this week to look over the situation and will begin immediately to try out his men.

***

The track team should have a good season. Dual meets with Yale and Cornell, and plenty of material, should make an interesting schedule. The team is practically intact, not a man being lost by graduation last June. All the point winners are in college and have been indulging in light, systematic practice. The distance men are now getting ready for the Boston meet, early in February. De Witt will find a hard opponent next Spring in Shevlin, but the football Captain-elect has been showing constant improvement ever since he entered college. At present he holds the record several yards. Princeton will be strong in the distance events. Perry, Williams, Adsit, and Goldsmith make a strong team for anything over the half-mile. The presence of Davis in the dashes would greatly strengthen the team, especially if he is backed by Phelan, who broke a tendon last Spring.

***

Pennsylvania's athletics have gone along the even tenor of their way the past week, things being slightly quieter than usual because of the mid-year examinations, which are now taking place. The greatest interest has been shown in the track work in preparation for the coming indoor games at Boston and New York. The one-mile relay candidates are showing excellent form, and as Westney, Pennsylvania's fastest man of last year, is running well, the chances are better than for several years to defeat the Harvard runners. But Harvard, with Lightner, Haigh, Sheuber, Shick, Clerk, and others to choose from, should have a wonderful team, and if Pennsylvania wins she will have to go right down to record figures. This they expect to do. Pennsylvania will have two entries in the two-mile indoor championship, which will be held at the Boston Athletic Association games. Bowen and Russell will be the representatives, but with Grant of the New York Athletic Club in the race neither can hope to win, though Bowen may make Grant do a new indoor record for the distance. Some of the freshman relay mates for the team are doing good work. Terry, Dear, Amsler, Major, and others are showing promise of developing into great winners. Terry was the interscholastic champion of Philadelphia for the half-mile two years ago, and as he did not work at school, he should do much better this year. Metzgar, Captain of the football team, will begin training next week. He has done close to 0:51 in the quarter.

Coach Ward is still asking for stronger men for the crew, and several of the football candidates will come out as soon as the examinations are over. Never before has Pennsylvania had such a wealth of veteran material with which to begin a season. This might lead to overconfidence were it not for the fact that much of this material has been tried in the fire of hard competition and found wanting. Several of the men are finished oarsmen, but they lack the speed and strength which are necessary in a four-mile race. On this account Ward states that he must have more men of stronger build.

One very considerable source of pleasure to Coach Ward is the fact that Davenport has come out, and there does not seem to be any doubt of his being allowed to row. Davenport is repeating his year, but this was made necessary by the bad case of blood poisoning which kept him in a hospital for over three months last season. Because he is behind in his work, plainly because of sickness, the rule relating to students back in their work will not apply to him. Davenport rowed in the Henley eights and he is one of the best oars that ever sat in a Pennsylvania boat. He is a Goshiller for stroke and it is more on this account than any other that his presence will be felt on Penn's crew this season.

Penn's basket ball team is making a good showing this year, and it is undoubtedly the strongest that the university has ever had.

There has been a well-defined report that an agreement has been reached between the Princeton and Pennsylvania football managements for a game next Fall. The manager of the team here says that such would be the case. This may be so at the present time, but it is quite possible that negotiations to that end are now in progress.

***

Athletics at Cornell are nearly at a standstill. Final examinations have been the all-important considerations for the past week, and during the coming week the Junior social events will eclipse athletic activity.

The crew men are the only ones who have worked without interruption and who will work just as hard during the coming week. Coxswain Courthey and Coison have been working over the fifty Freshmen with a view to cutting down the squad to manageable proportions. On Feb. 10 the Varsity men will report for work and at that time all of the first-year men who promise most will be prepared, and only those whose names appear on it will be allowed to expend further efforts for the honor of rowing in their class crew. The Freshmen realize, therefore, that every minute spent in the oars is precious, and that any relaxation will be disastrous. None are willing to miss the coming social events at the expense of losing the rowing form which they are just beginning to acquire.

The baseball squad, which has been working in the armory for the past week, has been dispossessed by an army of decorators. Jennings seemed to be the only one who was sorry at this enforced inactivity.

Another addition to the elaborate track schedule is being planned and is likely to be made within a short time. Johns Hopkins has expressed a desire to meet Cornell in a dual relay race at Baltimore on Feb. 14, and the two managers are now engaged in settling the details. This will be the first time that Cornell has ever met the Maryland university in any branch of athletics, and as the latter has a record for clean sportsmanship, the announcement has been received with much favor.

Cornell will meet Princeton in a relay race at Boston on the same day, but as there is an abundance of material there will be no difficulty in preparing two teams.

A change has been made in track policy regarding competition among those who desire to make the team. Heretofore it has been the practice to count as regular members of the team those who performed in the first events of the season. Hereafter new men will be taken on to displace others if they can prove their right to the place by distinguished work.

The choice of Warner, 1903, and Purcell, 1903, by the Athletic Council to coach next Fall's football team has met with much favor. Both have made records in football which have never been surpassed at Cornell. General confidence is felt in their ability to form a creditable team. Warner recently stated that next Fall an effort would be made to bring more alumni back to aid in the coaching before the big games. It is to the lack of sufficient aid in the coaching staff that he attributed last season's checkered record. He also said that every man would be made to realize that overconfidence was one of the unpardonable sins.

***

The contest for manager at the annual Yale football election was the closest in ten years at Yale. H. C. Miller, who was elected, was assistant manager last year, and his choice is a popular one. For the assistant managership the new Yale method of electing to the position was put into effect on Friday for the first time. The Sophomore class met on Thursday and nominated ten men for the place, the names of the first two receiving the largest number of votes going before the general University meeting on Friday. E. E. Spalding and W. N. Stillman of New York City were the Sophomore nominees, and the election went to Spalding, who will be in line for manager next year.

The long delayed election of next year's football Captain, in unprecedented delay at Yale, will now come, it is believed, very shortly, as it is necessary for the Captain to be chosen before the football dates are filled out, and work on that list will have to be begun at once. Leading football men at Yale do not agree in their forecasts of the outcome of the election, while Walter Camp, Yale's football adviser, will say nothing about the matter. The college at large still believes that E. T. Glass, whom Harvard is claiming is ineligible, will be chosen Captain, but he himself will say nothing about his chances. Several of his friends say that in all probability he will not play, and will not therefore be Yale's next Captain. It is understood that Glass has allowed it to be generally known among Yale's athletic officials that in no way will he stand in the way betwen Yale and Harvard, and will withdraw his candidacy for the position of Captain if there is the slightest question about his status as an eligible college player. Glass's position is unique in Yale's athletic annals, and he has the sympathy of the entire undergraduate body. He was withdrawn two years ago on a technicality, and may be forced out of the game again for similar reasons. There is, however, no question of his amateur standing, the whole matter being a reading of the rules in regard to four years' residence. As the final Harvard-Yale conference is likely to come in the near future, there is every likelihood that the election will take place very soon. If Glass is not elected it is probable that the honor of carrying forward next year's campaign will fall on either J. J. Hogan, the veteran right tackle, or on Metcalf, the half back.

The baseball season is now under way with the full squad of Freshman candidates for the Freshman nine in training, under the direction of Capt. Burnside Winslow of the Varsity team. There are 65 freshmen out for the team this year, several of whom will be taken on the Varsity squad as soon as the Varsity season opens this month. There are now ten candidates for Freshman pitcher, of whom one or two, notably Morgan Bowman, will be given a chane in the Varsity box, as he was chosen Varsity fullback last Fall. For catcher there are six men; for first base nine, of whom F. H. Rockwell, the Varsity quarter back, is one; for second base, six; for shortstop, five, among them O'Brien, from Andover, who is slated for the Varsity; for third base, six; for fielders, twenty.

Talk at Yale about athletic relations along new lines with other colleges continues. There is great pressure being brought to bear for a game with Columbia next season, and in all likelihood Yale will arrange for such a game, providing it can be put early enough in the season so as not to interfere with the championship series with Harvard and Princeton. The last time that Columbia played in Yale's schedule was in 1901 in New Haven, and G. Foster Sanford, Columbia's coach, rushed his team so hard through that game that Yale found herself playing a championship game at a crucial time in the year when the team was not in championship form. Columbia played also what Yale men regarded at the time as a rough game of ball, and this also had weight with the coaches, who immediately afterward cut the New York team off from last year's schedule.

"The situation with Columbia comes down to this," said a Yale athletic official recently. "Yale is willing to meet the New York team if a game can be arranged for the early part of the season. Yale regards the Princeton and Harvard games as the only ones that she cares to win by large scores, and does not therefore want to furnish a third aspirant for championship honors. This is not at all a slur on Columbia's playing ability, but is Yale precedent and tradition. If Columbia will play early in the year it is likely that Yale will take on such a game again."

There is talk at Yale of dropping Holy Cross and Georgetown from the baseball schedule, on the ground that as neither college is strict as to the amateur standing of its players, and as when either wins most of its games from the big colleges the claim is sometimes made of the championship. Yale is not at all likely to do this, however, as both colleges give fast practice games and are valued on that account. Yale having often been beaten badly by both.

***

Columbia's gymnastic men are getting down to final work in preparation for their opening intercollegiate meet of the season with Yale in the Columbia gymnasium on Friday evening. The Columbia gymnasts are at some disadvantage because of the fact that they have practically no new material to draw on, and have to rely solely on last year's men, although the latter's ranks are depleted by graduation in several instances. The Morningside institution is strongest in the parallel bar and flying ring events. Webster L. Benham, who won the intercollegiate parallel bar championship last season, is doing good work, and Frank S. Shaw, the university strong man, and Julian C. Smallwood, Captain, are all good second men in this event. Charles Eastmond, one of the best of the Columbia gymnasts, who, however, did not compete last season, is practicing again and is expected to be of material benefit to the team. Victor De La M. Earle, who won the intercollegiate honors in the flying rings two years ago but was beaten last season, will compete this year. C. T. Swart, Capt. Smallwood, Eugene Ashley, and E. S. Ward are other men in this event who are counted on to do well against Yale. Otto Pullich, another intercollegiate champion, will lead the team in the horizontal bar event. Most of the men who will compete in the parallel bars will also take part on the horizontal bar, but the team for the latter event has not yet definitely been chosen. H. S. Bloch and W. S. Lyle are the best performers on the German side horse. The tumblers, while they have been working hard, are a little below the form necessary for point winning in an intercollegiate meet. The best contestants in this competition are E. H. Lyford, H. M. McLintock, F. H. Lincoln, and H. H. Waggun. Columbia is counting on A. Ring to win the Indian club event. The entire team will do extra work this week, probably taking some evening practice, in order to get in the best possible form for Friday evening's meet with Yale.

Columbia's baseball candidates will be formally called out in the Columbia gymnasium one week from to-morrow, when the campaign for the season will be outlined by Capt. Frank O'Neill. Preliminary practice, which has been going on for the last two weeks, has been important in giving O'Neill some idea of the material he can count on. There have been several experienced and able candidates for pitcher, among them being H. L. Gearin of the 1901 team and W. A. Tilt, W. R. Tyler, and H. A. Grant of last year's nine. An effort is being made to induce C. W. Bartow, pitcher on the 1899 and 1900 teams, to play again this season, but it is feared that his studies in the medical school may prevent his doing so. Mehler, Goodman, Bloomfield, Taber, Dennison, Godwin, Adams, and O'Neill are others from last year who will again go on the diamond for Columbia. Altogether there are about sixty men who have signified their intention of becoming candidates for the Varsity.

Financially the outlook for 1903 is somewhat improved. The Controller of Sports has decided that the team management must raise at least $600 in order to prevent any possible deficit in the season's expenses, and of this sum about half has already been pledged. A very earnest effort is in progress to obtain the rest of the amount by the time the candidates begin their formal practice. The schedule, as published yesterday, is eminently agreeable to the players because of the large number of trips arranged; taking everything into consideration, therefore, the prospects for baseball at Columbia this season are brighter than they have been for many seasons.

Columbia's calendar of sports for this month has been prepared and shows a total of sixteen contests in which the various teams will engage. The schedule follows:

Feb. 6—Gymnastics—Dual meet with Yale in the Columbia gymnasium.

Feb. 7—Basket ball—Harvard, at Cambridge; Teachers College against Normal, at Teachers College. Track athletics—Track team competes in the Eighth Regiment games.

Feb. 10—Basket ball—Yale at New Haven.

Feb. 13—Basket ball—Harvard, at New York.

Feb. 14—Hockey—Brown, at St. Nicholas Rink. Track athletics—Relay team in Boston Athletic Association games, at Boston.

Feb. 18—Basket ball—Princeton, at Princeton. Track athletics—Closed handicap games in the gymnasium.

Feb. 20—Basket ball—Lafayette, at Easton, Penn.

Feb. 21—Basket ball—Lehigh, at South Bethlehem, Penn. Track athletics—Track team competes in National Athletic Club games at Forty-seventh Regiment Armory, Brooklyn.

Feb. 25—Track athletics—Closed handicap games in the gymnasium.

Feb. 27—Gymnastics—Dual meet with Pennsylvania in Columbia gymnasium.

Feb. 28—Track athletics—Columbia's third annual open indoor track meet in the Twenty-second Regiment Armory.

Columbia's fourth semi-monthly swimming races have resulted in a victory for F. M. Von Sall in the 200-foot race, with J. B. Shoenfeld second and F. C. Brown third; in the 300-foot race C. D. Trubenbach was first, J. W. Spencer second, and A. R. Camp third.

***

Whether or not it is advisable for law students in the American universities to compete in athletics has been made the subject for the gathering of statistics by Prof. Andrew A. Bruce of the law school of the university of North Dakota and a former member of the athletic council of the University of Wisconsin. Prof. Bruce has corresponded with the deans of the law schools of most of the prominent American universities. "The attitude taken by the majority of the law school faculties toward intercollegiate athletics," says Prof. Bruce, "is well expressed in the following apt language of Dean George W. Kirchwey of the law department of Columbia University. 'We assume a distinctly negative attitude in regard to the participation of our law students in athletic contests. I think the most of us have the feeling that the average student should put away childish things when he enters upon his professional studies. At the same time we are not inclined to give official expression to this feeling by prohibiting or even by actually discouraging our students from going into athletics.' Deans of the Pennsylvania and Notre Dame law schools concur with Prof. Kirchevey's sentiments, while Michigan, Illinois, Kansas, Missouri, Iowa, and Virginia take a slightly different view of the situation.

Long Island Kennel Club Meeting.

The Long Island Kennel Club will hold a meeting next Wednesday evening in the Johnston Building, at Flatbush Avenue and Nevins Street, Brooklyn. G. Muss Arnolt and C. G. Hopton, who have acted as judges in several bench shows, will be the guests of the club at that time.

MANY BASEBALL LEAGUES

Never Before Have There Been So Many Professionals Employed.

Active Plans for the Year Being Made by Big and Little Organizations—A Busy Season Ahead.

In New York City the cry that baseball is dead has been raised so often within the last few years that there are people who almost believe the statement to be fact. Despite its repetition no one disputes the idea that baseball is pre-eminently the National game of the United States; it is distinctly American in every aspect, and foreigners have often noted this, particularly when analyzing the game and the features of it which require that it be played with rapidity and a match brought to a close approximately within two hours. The Englishman's favorite cricket, and other sports that are imported, take a much longer time to finish.

So far as baseball being dead is concerned, to any one who closely scrutinizes the situation it will be evident that the old game is far livelier than for many years, and the promise for excellent sport during the season of 1903 far surpasses that expectation which even the most sanguine could hope for at the end of last year. The skirmishes between the American League, the National League, and the affiliated organizations have demonstrated that there is a keen competition for players of the highest type, and the most conservative estimate brings out the fact that over 2,000 young men will within the first two months of the year have signed contracts to play the national game. These men are in the majority of cases in superb physical condition, and while, in some instances they may be untutored, all are able to draw better salaries than bank clerks.

Never before in the history of the game have as many leagues been in existence and reliable speedy baseball players as scarce as is the case now. To form an adequate idea of how many men are needed to keep the ball going, in more than the literal sense, it is only necessary to count up the multitude of leagues in existence. Among the organizations that will flourish this Summer are the American League, National League, American Association, Southern League, Western League, Eastern League, New York State League, New England League, California League, Pacific Northwestern Association, Three-I League, Cotton States League, Texas League, Central League, Kentucky-Tennessee League, (just organized;) Connecticut State League, Virginia-Carolina League, and a number of other minor organizations.

The total roots up to seventeen leagues, scattered from New York to San Francisco, and from Penobscot, Me., to Fort Worth, Texas, and New Orleans.

It needs no great mathematician to figure that every league will average eight clubs, which means that 136 separate aggregations of baseball players will come out in the first warm days of Spring. Many of these clubs will carry from fifteen to twenty players on the pay roll; some of the more economical will get along with only twelve or fourteen. This economical streak reminds one of the famous story of the German baseball manager who thought that nine men were ample. When asked to furnish a relief pitcher at a fat salary he said: "Vat is dat? Another pitcher? Vat ye want 'im for? Ye hat only von first baseman yet." And it took a long while to convince him that a pitcher's arm would not last forever.

The average, however, of men on a team will easily reach fifteen players. With 136 teams, each using fifteen players, the remarkable total of 2,040 baseball players is reached. This is figuring only on the professional class in the league ranks. There are thousands of semi-professional aggregations who do not come under the head of League players, and yet they, as individuals, receive fair salaries.

The great total breaks all records in the annals of the game. Never before in the history of the sport in this country have as many leagues, as many teams, or as many players stood out so clearly before the public. The sum invested in these clubs as working capital is enormous, and the managers have brought baseball, even as a National pastime, down to a strictly business basis to make money. Past experiences have shown that they must provide the best of sport under the best of conditions in order to attract the public and take in money. The benefit of this experience is to be demonstrated this season, and every indication points to its being the greatest and most profitable year ever known in the National sport.

Toledo's New Baseball Manager.

BRISTOL, Conn., Jan. 31.—Frank C. Reisling, who was manager of the Hartford team in the Connecticut Baseball League last year, to-day signed a contract to manage the Toledo (Ohio) team in the American Association the coming season. He will leave here Feb. 19 for Toledo.

BIG ENTRY OF DOGS.

The Coming Westminster Kennel Show May Eclipse the Number Exhibited Last Year.

With the English mails to be heard from, and it is known that a number of entries are in them, the entry list for the annual bench show of the Westminster Kennel Club, which will be held in Madison Square Garden from Feb. 11 to 14, should be larger than that of last year, which was the largest ever known in the history of dog shows. Even the great Crystal Palace show in London was eclipsed, there being over 100 more dogs shown at the Garden in this city. The chances are in favor of beating even that record, as the number of dogs this year is nearly as great as that of last year. In Great Danes the number is greater, while the St. Bernards are not as numerous as a year ago. The fashion in small dogs seems this year to be running from Boston terriers to French bulldogs and toy spaniels, as the loss in the former breed is made up by the gain in the other two. Among the hunting dogs the number of pointers and Irish setters has decreased, but the loss has been made up by an increase in English setters. Bull terriers have lost in number, but the gain in bulldogs has made up the loss. The only loss that has not been made up by some other breed's increase is beagles.

The full list of entries, with English and a few other mails to come, is: Bloodhounds, 17; mastiffs, 6; St. Bernards, 70; Newfoundlands, 9; Great Danes, 93; deerhounds, 6; Russian wolfhounds, 41; greyhounds, 18; American foxhounds, 11; Basset hounds, 11; beagles, 87; dachshunds, 59; Chow Chows, 3; smooth and wire fox terriers, 143; Irish terriers, 63; Scotch terriers, 50; Welsh terriers, 25; black and tan terriers, 23; pointers, 119; English setters, 103; Irish setters, 39; Gordon setters, 17; griffons, 6; Chesapeake Bay dogs, 4; field and cocker spaniels, 180; collies and smooth collies, 158; old English sheep dogs, 40; Dalmatians, 8; poodles, 63; bulldogs, 177; French bulldogs, 82; bull terriers, 107; Airedale terriers, 53; Irish terriers, 6; whippets, 11; Skye terriers, 6; Bedlington terriers, 8; Schipperkes, 7; Yorkshire terriers, 17; Maltese terriers, 6; toy terriers, 9; pugs, 27; Pomeranians, 27; toy spaniels, 102; miscellaneous, 7.

The total list to date is 2,306.

ON LOCAL BOWLING ALLEYS.

Parke, Davis & Co. Bowlers Win Two Games in Drug Trade League.

In the tournament of the Wholesale Drug Trade Bowling Association yesterday the Parke, Davis & Co. bowlers won two games, defeating the teams of the General Chemical Company and of Bruen, Ritchey & Co. The score follows:

WHOLESALE DRUG TRADE LEAGUE.

Reid's Church Street Alleys.

FIRST GAME.—Roessler & Hasslacher—Malsch, 169; Stepan, 142; Du Bois, 156; Taveggi, 174; Bode, 128. Total, 768.

Sharp & Dohme—Reissig, 149; Quinn, 151; Koindorfer, 122; Schultz, 143; Doerr, 134. Total, 699.

SECOND GAME.—Sharp & Dohme—Reissig, 140; Quinn, 158; Korndorfer, 160; Schultz, 119; Doerr, 167. Total, 744.

Lanman & Kemp—McGillen, 144; Dixon, 140; Davis, 121; Bissell, 137. Total, 642.

THIRD GAME.—Lanman & Kemp—McGillen, 126; Dixon, 121; Davis, 128; Merrill, 120; Kampf, 189. Total, 684.

Roessler & Hasslacher—Malsch, 148; Stepan, 201; Du Bois, 165; Taveggi, 130; Bode, 156. Total, 700.

FOURTH GAME.—Parke, Davis & Co.—Brunn, 190; Burgess, 130; Jenkins, 121; Blake, 136; Carr, 133. Total, 710.

General Chemical Company—Read, 194; Finch, 154; Williams, 135; Bissell, 153; Storms, 134. Total, 710.

FIFTH GAME.—General Chemical Company—Read, 175; Finch, 130; Hudson, 118; Bissell, 151; Storms, 148. Total, 732.

Bruen, Ritchey & Co.—Hoffman, 128; Emmett, 103; Help, 133; Reith, 164; Norris, 160. Total, 688.

SIXTH GAME.—Bruen, Ritchey & Co.—Hoffman, 127; Emmett, 80; Help, 155; Reith, 144; Norris, 148. Total, 691.

Parke, Davis & Co.—Brunn, 145; Burgess, 147; Jenkins, 124; Blake, 151; Carr, 165. Total, 732.

Montreal's Champion Hockey Team.

MONTREAL, Jan. 31.—The Montreal Hockey Club, the present holders of the Stanley Cup, emblematic of the hockey championship of the world, defeated the Victoria Club of Winnipeg to-day in a contest for possession of the trophy by the score of 9 goals to 1.

Cory Wins Lake Worth Golf Cup.

Special to The New York Times.

PALM BEACH, Fla., Jan. 31.—The semi-finals in the tournament for the Lake Worth Cup were played here to-day. C. B. Cory of Boston won the cup, defeating McKiwee of the Exmoor Club, Chicago, by 5 up and 2 to play. Sidney Maddock of the Crescent Athletic Club defeated S. P. Shaw by 1 up for the Consolation Cup. In the semi-finals this morning Cory defeated C. Brecker by 2 up and 1 to play, and McElwee defeated G. E. Barnard of Brookline by 5 up and 2 to play. For the Consolation Cup S. P. Shaw defeated Dalson Lloyd of Pittsburg by 1 up in 19 holes, and Maddock defeated J. Manning by 2 up.

Mohawk Athletic Club Games.

Yale's famous athlete, Dick Sheldon, will be the scratch man in the 12-pound shot-putting contest at the joint games of the Mohawk Athletic Club and Company H of the Eighth Regiment, to be held at the armory of the Eighth Regiment on the evening of Feb. 7. He has been training hard during the past Winter, and it is thought that he will come pretty close to record figures for this event. A fine field will engage in the mile-and-a-half scratch run, including Franchot of Yale, A. L. Newton and H. E. Smith of the New York Athletic Club, R. I. Sanford, J. J. Joyce, P. Sputan, and several other local men. Harvard will be represented by Curtis and Moynahan, the sprinters, while the games will close on with E. J. Rohner, 220 East One Hundred and Sixty-first Street.

Fordham College Baseball Candidates.

W. E. Keane, Captain of the Fordham College baseball nine, will issue a call for candidates on Tuesday. The largest number of students in the history of the college will try for positions on the varsity team this Spring. The failure of the athletic agreement to obtain a coach has been a serious drawback, but by the end of the week a coach is expected to be on hand to take charge of the candidates in their work.

Leo Cronin, the star pitcher of last year, has left Fordham. It is rumored that he will eventually sign with the St. Louis National League team, to join his friends, Mike and Jack O'Neill, the catchery of that team.

GOOD RELAY RACE EVENTS

Inter-Club Run Won by the Star Athletes at Eighth Regiment Armory.

Pratt Institute Boys Led in the Interscholastic Contest—Valentine Took the Mile Run by Barely a Foot.

Interest at the joint games of Company K, Eighth Regiment, N. G. N. Y., and the Pastime Athletic Club, held at the Eighth Regiment Armory, Ninety-fourth Street and Park Avenue, last night, centred in the two relay races, one for interscholastic teams, and the other for club or college teams, both at a distance of one mile. The inter-club event, which was the best contested and most interesting, was won by the team of the Star Athletic Club of Long Island City, composed of F. J. Lee, G. J. Rottger, P. Waters, and John G. Hoben. The Xavier Athletic Association team was second, the Pastime Athletic Club third, and the College of the City of New York fourth.

The Star team was heavily handicapped, and Lee, its representative in the first relay, ran last. Byrnes of the City College being first, Daly of the Xavier second, and Gibson of the Pastimes third. In the second relay Grady of the Pastimes led, with McGrade of the Xaviers second, Rottger of the Stars third, and the City College runner fourth. In the third lap Waters secured the lead for the Stars in a close and pretty race, with Humphreys of the Xaviers, the Pastimes and the City College representatives being third and fourth, respectively, and in the final stage Hoben made a fine finish and won by about three yards.

There were four starters in the interscholastic relay race, and the event was won by the Pratt Institute team of Brooklyn, with the High School of Commerce second, Mackenzie School of Dobbs Ferry third, and the De Witt Clinton High School (Thirteenth Street) of this city fourth. The De Witt Clinton and the High School of Commerce runners made the pace, and alternated in the lead in the first three relays, the De Witt Clinton representatives leading in the first and the third laps, with the Commercial School team second and the latter leading in the second lap, with the De Witt Clinton runner second. In the last relay, however, Harkness of the Pratt Institute team came through with a rush and beat Geis of the High School of Commerce for first place by five yards. Mackenzie of the Mackenzie School was a very fine third.

Another good race was seen in the mile handicap, in which H. Valentine of the Twenty-third Regiment of Brooklyn, who was scratch man at 28 yards, cut down the entire field of more than a score of starters, and finally won by a foot ahead from G. Witter of the Brooklyn Young Men's Christian Association, who had been long-mark man at 100 yards, and who had maintained his lead until overtaken by Valentine almost at the finish line. Valentine, in fact, had cut down the Brooklyn Young Men's Christian Association up with him from the thirty-yard mark, but the latter could not beat Witter at the finish, though he made third place.

In the mile bicycle race C. Cunningham of the Forty-seventh Regiment of Brooklyn finished first in a close race, but was disqualified for foul riding, and the next three in order were given the places.

The entire programme of events, though a lengthy one, with large fields of starters in nearly every race, was run off with remarkable promptness and precision, the floor was kept clear of non-competitors in a most satisfactory manner, and the games were concluded before 11 o'clock, all of which is unusual in armory games and reflects considerable credit upon the officials of the meeting. The summary follows:

ATHLETICS.

60-Yard Run, Novice.—First heat won by D. J. Williamson, Twelfth Regiment; A. H. Crockett, unattached, second. Time—0:07 2-5. Second Heat—Won by J. J. O'Keefe, unattached; H. Clock, Pastime Athletic Club, second. Time—0:07 2-5. Third Heat—Won by F. Smith, Star Athletic Club, Long Island City; C. Evans, Pastime Athletic Club, second. Time—0:07 1-5. Fourth Heat—Won by R. J. Conlan, Fordham College; J. Dansker, De Witt Clinton High School, second. Time—0:07 2-5. Fifth Heat—Won by A. Hirt, unattached. Time—0:07 3-5. Sixth Heat—Won by Elliott D. Moore, Twenty-third Regiment; G. F. Magnire, Warlow Athletic Club, second. Time—0:07 1-5. Seventh Heat—Won by E. J. Ladington, Pratt Institute; E. C. Stache, Brooklyn Athletic Club, second. Time—0:07 1-5. First Semi-Final Heat—Won by Crockett; Clock, second. Time—0:07 1-5. Second Semi-Final Heat—Won by O'Connor; Dansker, second. Time—0:07 1-5. Third Semi-Final Heat—Won by Stache; Ladington, second. Time—0:07 1-5. Final Heat—Won by Crockett; Clock, second; Dansker, third. Time—0:07 1-5.

60-Yard Run, Handicap.—First Heat—Won by E. Spitzer, Pastime Athletic Club, (11 feet;) F. Hilbert, New York Athletic Club, second, (6 feet.) Time—0:06 2-5. Second Heat—Won by A. C. Fontaine, High School of Commerce, (14 feet;) W. P. Jacoby, Union Settlement Athletic Club, (8 feet,) second. Time—0:06 3-5. Third Heat—Won by F. S. Callahan, New West Side Athletic Club, (12 feet;) N. Fried, West Side Branch of Y. M. C. A., (5 feet,) second. Time—0:06 2-5. Fourth Heat—Won by John C. Doyle, National Athletic Club of Brooklyn, (12 feet;) J. Bohan, New West Side Athletic Club, (7 feet,) second. Time—0:06 3-5. Fifth Heat—Won by James J. Fallon, Fordham College, (11 feet;) W. G. Teuer, Battery B, (16 feet,) second. Time—0:06 3-5. Sixth Heat—Won by F. J. Callahan, New West Side Athletic Club, (10 feet;) J. Payne, Fourteenth Regiment, (11 feet,) second. Time—0:06 2-5. Seventh Heat—Won by J. F. Cooke, Twenty-third Regiment, Brooklyn, (16 feet;) J. Wale, Columbia University, (10 feet,) second. Time—0:06 2-5. First Semi-Final Heat—Won by Callahan, Doyle second. Time—0:06 2-5. Second Semi-final Heat—Won by Spitzer, Fried second. Time—0:06 2-5. Third Semi-final Heat—Won by Cooke, Wale second. Time—0:06 2-5. Final Heat—Won by Callahan, Fried second, Cooke third. Time—0:06 2-5.

300-Yard Run, Handicap.—Won by H. P. Smith, New York Athletic Club, (36 yards;) D. W. Poanchin, Yale University, (32 yards,) second; F. Hanlon, Mohawk Athletic Club, (30 yards,) third. Time—0:30 1-5.

One-Mile Bicycle Race, Handicap.—First Heat—Won by Peter Ott, Oceanside Wheelmen, (75 yards;) J. M. Bergler, Twelfth Regiment, (120 yards,) second; George Engelhardt, unattached, (100 yards,) third. Time—2:30. Second Heat—Won by C. Cunningham, Forty-seventh Regiment, (100 yards;) A. Weintz, Brooklyn, (90 yards,) second; Oscar Ludwig, Twelfth Regiment, (18 yards,) third. Time—2:28 4-5. Final Heat—Won by Weintz, Belgler second, Ott third; Cunningham finished first, but was disqualified. Time—2:27 1-5.

300-Yard Run, Novice.—First heat won by C. J. Clarke, Twenty-second Regiment; F. Lary, Mohawk A. C., second; F. J. O'Connor, unattached, third. Time—1:28 2-5. Second heat won by Angus S. McDonald, Columbia University; J. J. King, unattached, second; E. C. Stache, Brooklyn A. C., third. Time—1:28. Third heat won by R. J. Darling, St. Joan's Institute; W. Geiger, Jersey City Y. M. C. A., second; J. Barkley, Twenty-second Regiment, third. Time—1:30 2-5. Fourth heat won by H. D. Donaldson, Mann School; R. A. Fitzpatrick, unattached, second. Time—1:30 2-5. Final Heat—Won by Donaldson, King second, Stache third. Time—1:28.

300-Yard Run, Handicap.—First heat won by F. Hollings, Pequot Athletic Club, (30 yards;) J. J. McLoughlin, New West Side Athletic Club, (34 yards,) second. Time—0:34 4-5. Second heat won by W. S. Yeates, Battery B, (34 yards;) W. E. Kaufman, National Athletic Club, Brooklyn, (32 yards,) second. Time—0:33 2-5. Third heat won by John J. O'Keefe, unattached, (36 yards;) J. C. Tappen, National Athletic Club, Brooklyn, (30 yards,) second. Time—0:33 4-5. Fourth heat won by W. Horner, St. Bartholomew's Athletic Club, (16 yards;) A. Bischoff, Pastime Athletic Club, (34 yards,) second. Time—0:33. Final heat won by Yeates; Horner second, O'Keefe third. Time—0:33.

One-mile Run, Handicap.—Won by H. Valentine, Twenty-third Regiment, Brooklyn, (28 yards;) H. Witter, Brooklyn Central Y. M. C. A., (100 yards,) second; T. L. Sanford, Brooklyn Central Y. M. C. A., (90 yards,) third. Time—4:26 4-5.

Putting the 16-Pound Shot, Handicap.—Won by R. Kinney, Yale University, (10 feet,) with 46 feet 4 inches; F. E. Johnson, Columbia University, (9 feet,) second, with 44 feet 7 inches; F. Ryan, St. Bartholomew's Athletic Club, (8 feet,) third, with 44 feet 6 inches.

One-Mile Interscholastic Relay Race, team of four, each to run one mile.—Won by Pratt Institute team, composed of J. Mangan, (18 yards;) R. Kilbon, (18 yards,) O. G. Hilton, (18 yards,) and W. E. Harkness, (12 yards;) High School of Commerce team, composed of Hoffman, (18 yards,) Hamilton, (20 yards,) Geis, (20 yards,) and Geis, (20 yards,) second; Mechanic School (Dobbs Ferry, N. Y.,) team, composed of D. Hazbrouck, (20 yards,) D. Craig, (20 yards,) C. T. Larsitera, (20 yards,) and C. Mackenzie, (20 yards,) third. Time—3:35.

One-Mile Inter-Club Relay Race, Handicap, Teams of Four, Each to Run One Mile.—Won by Star Athletic Club (Long Island City) team, composed of F. J. Lee, (20 yards,) G. J. Rottger, (26 yards,) P. Waters, (24 yards,) and J. G. Hoben, (24 yards;) Xavier Athletic Association team second, Pastime Athletic Club team third, College of the City of New York fourth. Time—3:33 4-5.

Yale Basket Ball Team Disqualified.

John Stell, Chairman of the Registration Committee of the Metropolitan Association of the Amateur Athletic Union of the United States, yesterday disqualified from further competition in amateur sport under jurisdiction of the Amateur Athletic Union the Yale basket ball team. Its individual players are Barber, Prior, W. Hyatt, R. Hyatt, Colton, Church, and Donohue. The West Side Branch Young Men's Christian Association team was also disqualified, the individual players being Robert Garrett, T. Kiser, T. Lee Wendleburg, Thompson, and R. Lee.

It is feared upon further investigation being made, instead of merely suspending themselves from competition on a technicality, that all the players have made themselves professionals, as the Young Men's Christian Association team had as one of its players the professional instructor, Weismiller.

If the men on these teams desire reinstatement and if they desire to compete in amateur sport the Registration Committee will make a rigid investigation. In the meantime all of the players must be considered by any association of the Amateur Athletic Union as professional athletes.

The officials of the Metropolitan Association of the Amateur Athletic Union are very indignant that a club of the association should violate its rules. Charges will be brought against the West Side Branch of the Young Men's Christian Association, and it will be disciplined.

YALE FRESHMEN BEATEN.

Pratt Institute Basket Ball Team Won by a Single Goal.

In a game that was characterized by an almost total lack of team play on both sides and a lot of good-natured "rough-housing," the Pratt Institute basket ball team defeated the Yale freshmen by a single goal, the score being 29 to 28.

The schoolboys had the advantage of a familiar floor and a rather friendly referee, umpire, and timekeeper, who in combination and by reason of intense absorption in the playing neglected to see various fouls and allowed the second half to consume some forty-five minutes of time. However, as the score was close, with first one team and then the other in the lead, neither spectators nor players objected.

The Institute team started off with a rush, and in the first half and when time was called had a good lead of a half dozen baskets. In the second half, however, Yale braced, and by a few minutes of fast work in which little Anderson, who had substituted for Brown, at forward, figured prominently, brought the score up to a tie at 18 points each. Then a goal from foul put Pratt in the lead. Yale braced and went 1 point ahead, then Pratt, and so on to the last few minutes of the three-quarters of an hour half, when Pratt secured the final goal. For Yale Freshman Anderson at right forward, and Cook, his running mate, played the best ball, while Davis and Hanlon, the forwards of the Pratt team, "put it over" the freshman guards.

In a preliminary game the Institute Alumni defeated the Mohegan Athletic Club of Brooklyn by a score of 40 to 8. The line-up:

Pratt Institute.		Yale Freshmen.
Brady, Richey	R. G.	R. F., Brown, Anderson
Preston	L. G.	L. F.
Ditz, Brady	C.	C. Cook
Hannigan, Kirkman	F. F.	R. G. Fawley
Davis	F. F.	L. G. Largey

Field goals—By Davis, 3; Hanlon, 3; Ditz, 2; Brady, 3; Preston, 1; Brown, 1; Anderson, 1; Tilson, 4; Cook, 4. Goals from foul—By Hannigan, 2; Preston, 1; Tilson, 1. Referee—A. Ridge. Umpires—Humpston and Humpston. Scorer—Dr. Voorhees. Timer—J. E. Thompson. Time—Twenty-five-minute halves.

N. Y. A. C. SWIMMING RACES

Columbia Beat Yale in the Relay Competition.

Local Collegians Also Won the Water-Polo Match—Sharp Contests in the Distance Events.

The swimmers of Columbia University carried off the lion's share of the honors in the swimming races in the natatorium of the New York Athletic Club last night. With the exception of the novice race at 50 yards and the water polo match which concluded the evening's events, all the competitions were handicaps. These were well arranged and the finishes in the final heats of the various races were very exciting. Owing to the large number of entries it was necessary to hold from three to five trial heats in each event.

From a partisan point of view, the most exciting race of the evening was the university relay at 800 yards, in which Yale and Columbia were entered, each being represented by four men. S. F. Mather of Yale and A. R. Camp of Columbia swam the first seventy-five yards. Mather took the water first, and in the race down the tank he gradually drew away from Camp. A bad turn, however, enabled Camp to catch up, and to take the lead, and the Columbia swimmer, going steadily, gained a yard or so for his team, which Z. P. Halpin, the second swimmer, increased to about five yards. C. D. Trudenbach and J. W. Spencer did the third and fourth relays. Both gained for their teams, and Columbia had an advantage of nearly ten yards at the finish. Yale protested the result of the race, claiming that one of the Columbia swimmers had entered the water before the finish of a relay. As Columbia won the race easily, the protest was not allowed.

The best race of the evening was the handicap at 150 yards, in which three men competed. G. P. Cooke of the Yale Swimming Club with an allowance of twenty yards was the first to take the water, and he was followed by E. H. Adams of the New York Athletic Club, whose allowance was ten seconds. L. B. Goodwin, with five seconds handicap, was the scratch man. Cooke swam strongly and maintained his lead during the greater part of the race. Adams was quickly passed by Goodwin, who gradually reduced the lead of Cooke. With two laps to go Goodwin and Cooke were practically on even terms, while Adams was two yards in the rear. In the sprint for the finish Adams, by superhuman efforts, managed to catch Cooke, but he could not quite get up to Goodwin, who won handily. Adams had a few inches the better of Cooke at the finish.

In the handicap swim at 100 yards Charles Ruberl of the New York Athletic Club was scratch man, and his exhibition was the best seen during the night. He overhauled his four competitors, and at the finish was only a foot or so behind his clubmate, J. A. Ruddy, to whom he was conceding six seconds. Ruberl's time, 1:04 4-5, was within a second and one-fifth of the American indoor record.

Three Columbia men reached the final of the novice race at 50 yards, but one of them, M. J. Cherry, did not start. The other contestant was J. Rogers of Yale, and he managed to defeat the wearers of the blue and white in the fairly good time of 0:32.

The contestants in the water polo match were Columbia University and the second team of the New York Athletic Club and the university team won rather handily by the score of 5 goals to 0. The feature of the game was the team work of the collegians. The forwards, Abbott, Camp, and Spencer, were always together, and their combined attack was too much for the athletic club's defense. The work of Abbott in particular excelled, and he scored four of the five goals credited to his team.

For four minutes in the first period of five minutes the teams played without any apparent advantage. Columbia succeeded in advancing the ball twice to the New York goal, and the latter retaliated a similar number of times. Then the New Yorks by good team work brought the ball down to the Columbia goal, and apparently scored. The referee, Harry Reeder, refused to allow it, because the man who made the goal was inside the line and received the ball on a pass from the outside. Fifteen seconds later Abbott scored the first goal of the game, being ably assisted by Camp and Spencer in a mass play on the New York Athletic Club's goal tenders. A similar play in which Abbott again scored the goal was made a few seconds before the finish of the half.

In the second half the Columbia boys played even better, and the team play of the forwards was applauded frequently. The first goal was made in one minute and ten seconds. Duden, Columbia's goal-keeper, passed to Spencer. Spencer carried the ball down the tank and passed neatly to Abbott when Wenck grappled with him. In the scrimmage in front of the goal the men were under water nearly half a minute, when Abbott emerged from the tangle of arms and legs and scored the third goal.

In another attack on the goal of the wearers of the Mercury Foot Abbott was fiercely tackled and held under water some time by the goal tenders. They forgot to pay attention to the other forwards, and J. W. Spencer came up from the left and scored the fourth goal. The fifth goal was made by Abbott, a combined attack on the athletic club's goal giving him the opportunity. But forty seconds of the game remained to be played, and neither side was able to do anything in this time. The line-up:

N. Y. A. C. G.	Position.	Columbia, 5.
F. J. Quigg	Centre	C. D. Abbott
T. E. Stalling, Jr.	Right forward	A. R. Camp
D. Hesser	Left forward	J. W. Spencer
E. R. Wenck, Jr.	Half back	L. E. Alexander
W. D. Hennes	Goal	L. G. Hanes
H. H. Munro	Goal	F. H. Duden

Referee—H. Reeder, New York A. C. Goals—Abbott, (4,) Spencer, (1.) Time of game—Two five-minute halves.

Fifty Yards, Novice.—First heat won by F. C. Brown, Columbia Swimming Association. Time—0:35 2-5. Second heat won by J. Rogers, Yale Swimming Club. Time—0:34 1-5. Third heat won by M. J. Cherry, Columbia Swimming Association. Time—0:37 1-5. Fourth heat won by W. Eckert, Columbia Swimming Association. Time—0:35 1-5.

Final Heat—Won by J. Rogers, Yale Swimming Club; F. C. Brown, Columbia Swimming Association, second; W. Eckert, Columbia Swimming Association, third. Time—0:34.

250 Yards, Handicap.—First heat won by G. P. Cooke, Yale Swimming Club. Time—3:48 2-5. Second heat won by L. B. Goodwin, New York Athletic Club. Time—3:45 1-5. Third heat won by E. H. Adams, New York Athletic Club. Time—3:40.

Final Heat—Won by L. H. Goodwin, New York Athletic Club; E. H. Adams, New York Athletic Club, second; G. P. Cooke, Yale Swimming Club, third. Time—3:34 2-5.

100-Yard Handicap.—First Heat—Won by Charles Ruberl, New York Athletic Club. Time—1:05 4-5. Second Heat—Won by Harry Kollock, Athletic Club of Philadelphia. Time—1:12 1-5. Third Heat—Won by David Hesser, unattached. Time—1:12 2-5. Fourth Heat—Won by J. A. Ruddy, New York Athletic Club. Time—1:09 1-5. Fifth Heat—Won by T. E. Kitching, Jr., New York Athletic Club. Time—1:10.

Final—Won by J. A. Ruddy, New York Athletic Club; Charles Ruberl, New York Athletic Club, second; David Hesser, unattached, third. Time 1:06 2-5.

800-Yard University Relay Race.—Won by Columbia University—A. R. Camp, Z. P. Halpin, C. D. Trudenbach, and J. W. Spencer; Yale University—S. F. Mather, M. S. Damon, W. R. Otthwein, and H. H. Loudenslager—second. Time—8:19 3-5.

Piano Selling Unparalleled.

If you have never visited the Sterling Building, make a mental comparison of this store with its six floors filled with Pianos of various makes—Qualities—Designs—Sizes, etc., with the little store or department offering a very limited number and small variety of Pianos for which they all claim the one title of **"Best."** **The Sterling Piano Company**, with its vast facilities for manufacturing and selling Pianos, covering a period of forty-three years, are enabled to offer the fullest value and the very highest class of Pianos obtainable.

Absolutely Trustworthy Pianos

At Low Prices

And on the easiest monthly payments. Our business is and always has been conducted on a strictly one price basis and that one price is plainly marked on the price tag attached to each Piano. We have medium priced Pianos that are worthy of consideration. Pianos that are so thoroughly and conscientiously constructed that they will satisfy the most exacting musicians who subject them to constant daily use for many years. Prices range from **$190, $200, $225** to **$275.** One Price—One Profit.

Indisputable Bargains

In New and Little Used Pianos.

We have a large number of new Pianos of various case designs which have been discontinued and will not appear in our new 1903 Catalogue. Otherwise than case design they are equal to the 1903 models. **The Price Reductions** mean an actual saving of $50, $75 and $100. Holiday used Pianos—some have been used but a single month, others two and three months—all are uninjured but must be sold as used, at decided reductions. Some genuine high class bargains at **$145, $165, $175, $190, $200, $225** to **$350.**

Grand Pianos---Sterlings and Others.

A new Sterling Baby Grand, 1903 model, at our regular price is a tempting bargain, but the little used Baby Grands, which we are offering at from **$360** to **$500**, are equal in every way to new $700 and $800 Grands.

Square Pianos at Pin Money Prices.

Such good Squares as we are offering at small prices make this an unusual buying time. These Pianos have been properly repaired and newly finished. You can exchange later for an Upright and receive a liberal allowance. Small Squares, **$25, $35, $40, $50**; medium size, **$40, $50, $60**; beautiful Grand Squares, **$60, $75, $90, $100.**

New Pianos Rented.

We rent only new Pianos of the most modern case design and of exquisite tone. The sort you will want to keep as long as you require a Piano. We take excellent care of the Piano as long as you rent and should you decide to purchase we will allow a liberal amount of the rent to apply toward the purchase.

Our Monthly Payment Plan.

is a practical, common sense method of purchasing a Piano for those who do not wish to pay cash. We do not charge interest nor do we take a note or mortgage—you simply agree to pay a certain amount each month. We deliver the Piano on first payment and require no references nor do we investigate your private affairs.

Organs---All Sorts.

Suitable for parlors, lodge rooms, chapels, or any place where Organ music is required.

Used Organs, $15, $25 to $60. New Organs, $25, $40 to $150.

The Sterling Piano Co.

(Open Monday and Saturday Evenings.)

NATIONAL BODY IN SKATING.

New Association Definitely Formed at the Clermont Rink—Board of Managers Chosen.

The Amateur Skating Association of the United States was formally organized last night at a meeting held in the Clermont Skating Rink, Brooklyn. The preliminary organization was effected over a month ago, and last night eleven clubs were represented. The aim of the association is to place skating on a higher amateur status than it has enjoyed in the past, and also to have an authoritative body that can define an amateur skater and govern the various annual championship contests. An amateur rule, more strict than has obtained in the past, was adopted together with the constitution and by-laws that were drawn up at the preliminary meeting.

The clubs represented by delegates were: Skating Club of Brooklyn, Clifford E. Dunn; Pawnee Athletic Association, Brooklyn, E. Mulligan; Hoboken Skating Club, W. J. Richie; Mohegan Athletic Association, Brooklyn, C. G. Abberly; Verona Lake Skating Club, B. H. Slayback; Heffley Athletic Association, Norman T. Heffley; College of the City of New York, George W. Kyle; New York Athletic Club, W. W. Swan; The St. Louis Athletic Association, the Cambridge Skating Club, (Mass.,) and the Springfield Skating Club, (Mass.,) were represented by proxies. The New York Athletic Club, City College and Verona Lake delegates did not vote, but attended in doubt as to its ability to join, as it has entered a professional, Peter Sinnigrud, in the Canadian races for professionals.

The delegates elected the following Board of Managers: Henry Sherrmey and Otto Searny, New York Athletic Club; James Karst, St. Louis; O. C. Preston and James H. McLean of the Pittsburg Skating Club; Thomas T. Hinckley, Cambridge; Norman T. Heffley, Heffley Athletic Association; Clifford E. Dunn, Skating Club of Brooklyn; John G. Dougherty, Plainfield, N. J., Charles M. Van Kleeck, Flushing, and Frank H. Clark, unattached.

The managers will meet this week and elect officers for the year. The President will then appoint committees of five each to take charge of the speed and figure skating championships, and the dates set for these events at the preliminary meeting will undoubtedly be ratified. They are: Indoor speed contests at Pittsburg, Feb. 21 and 22; outdoor races at Verona Lake, Feb. 12, and figure skating at the Clermont Rink, Brooklyn, March 13.

A resolution was adopted fixing the individual dues at $1 and club dues at $5.

HARVARD BEAT PENN.

Special to The New York Times.

CAMBRIDGE, Mass., Jan. 31.—Harvard defeated Pennsylvania to-night in a rough, fast game of basket ball by a score of 13 to 11. The game was fast from beginning to end, but it was marred by much unnecessary roughness and frequent fouls. Up to the last few minutes of play the game was Pennsylvania's, but Harvard braced up, and in a cyclone finish Randall threw two goals in succession and won the game for Harvard.

The last was one of the prettiest goals ever thrown on the Harvard floor. Randall got the ball, and there was a hot scrimmage for a moment until he raised it above his head, and, jumping clear from his opponent, sent the ball into the basket from the centre of the field. Throughout the game Pennsylvania's team played excellently, and her long, accurate passes brought forth frequent applause from the large number of spectators. If Pennsylvania had had any ability to shoot, Harvard would surely have been beaten, for the wearers of the red and blue had many free tries for the basket.

The Harvard men were very accurate in their basket shooting, but very weak in their passing. Randall and Fosdick were conspicuous exceptions in this respect. Evans of Pennsylvania secured seven of the eleven points scored by his team, and in every way he outplayed his opponent. Darraugh, who was forced to retire on account of the loosening of several of his teeth, also played well. Harvard's throwing of fouls was very poor. Out of some fifteen or sixteen chances the Crimson men threw but five baskets. In general playing Pennsylvania's team work was much better than Harvard's, and, except for a desperate rally at the end of the game, Harvard would have been beaten.

Line up:

Harvard.	Position.	Univ. Pennsylvania.
Hannavan	Right guard	Darraugh and McCrudden.
Fosdick	Left guard	Bennett
Randall	Centre	McCrudden and Smith.
Smith, Henderson	Right forward	Lawrence
Linehan	Left forward	Evans

Goals from field—Fosdick, Randall, (2,) Evans, Lawrence, McCrudden. Goals from foul—Evans, 2; Smith, 3; Evans, 5. Referee—Mr. Montaigne, University of Minnesota. Umpire—Mr. Burns, Boston Y. M. C. A.

BROOKLYN.

Our Greatest China Sale.

Quantities : Variety : Low Prices Never Equaled.

We lead the country in China selling—and should do so. In many other lines we must buy from makers just as do other stores—larger buying, better storekeeping and smaller profits are reason for Abraham and Straus pre-eminence in those lines. But in China and kindred wares WE ARE THE MANUFACTURERS. We have our own manufacturing places abroad—at Limoges, at Rudolstadt, at Carlsbad, at Steinschonau—the famous centers where the finest China in the world is made. We have our own decorating and glass cutting works at home—much of the finest Cut Glass in the world is turned out at our establishment. Close relations with other manufacturers also give us unusual purchasing advantages. Prices are lowest here every business day of the year.

Now the whole force of this great business has been employed in the preparation for this annual occasion. Months ago our plans were made. For days the great casks have been arriving. The goods are fine, fresh, desirable, as fine as can be had anywhere at regular prices.

The Saving Is a Fourth, In Many Cases Half or More

on the usual prices here, which are the lowest anywhere. It is a sale beyond all precedent. It is an occasion which appeals to every housekeeper. It is one of the largest contributions by the Abraham and Straus Store to economy in good housekeeping.

China.

Basement and Court, West Building.

A Tremendous Clearance Sale of

Women's Knit Underwear---Half Priced.

Seconds—and when we have printed the word out fair, we wonder if it is exactly just to call such Underwear "seconds." The maker did it—that's the reason we have the garments to sell for such ridiculous prices. But the defects are about as important as a speck of dust on the window pane—and a great deal harder to see.

The Underwear is fine, dainty and splendidly made—as fine as we have ever had to sell for full prices. The garments are of medium weight with high necks—exactly the right wear for now and later. And not one is over half price—many are less than that. It is the most remarkable sale of the sort we ever announced. Not sent C. O. D.

50c. Medium Weight Underwear, 24c

Very fine quality, ribbed shaped Undervests, trimmed with silk tapes, silk edging and pearl buttons, high neck, long or short sleeves. Knee and ankle length French band Drawers and knee and ankle length Tights to match.

75c. Lisle Thread Underwear, 33c.

Fine lisle thread Undervests, ribbed shaped, high neck, short or long sleeves, trimmed beautifully; knee length French band Drawers to match.

$1.00 Underwear, 48c.

Best quality lisle thread Undervests; also, silk and lisle mixed; high neck and long or short sleeves; knee length, French band Drawers to match.

$1 and $1.50 Combination Suits, 48c

Fine cotton and also lisle thread ribbed Combination Suits; excellently made and finished; all short sleeves, high neck, knee and ankle length.

Main floor, front, Central Building.

Stirring News of

Women's Tailored Wear.

From one of the best New York makers come fifty of the very latest Tailored Suits he made—down in price to-morrow for quick clearance to

$23.95 a Suit.

Two styles, both of fine broadcloth, in navy blue, brown and black. One style has a blouse front jacket with double cape over the shoulders, trimmed with silk ornaments and fancy braid; flat collar, belt and cuffs of stitched peau de soie; lined with white taffeta and interlined. The other style is a blouse front jacket, with revers and collar of panne velvet and trimming of black braid; front, back and sleeves are pleated; postillion back and lining of black taffeta. Skirts are in the nine gored model with fan pleat bottom. Some are made over taffeta silk drop, others over percaline. Sizes 32 to 42—very fine value at $23.95

The Clearance of Winter Coats.

Short Jackets, box Coats, three-quarter and full length Coats a about half price, in some cases less than half.

Jackets and Box Coats, $4.95 to $12.50.

Three-quarter and full length garments, $24.74 to $49.50.

Second floor, front, Central Building.

Boys' Spring Suits.

Here is news for the youngsters who are ready to get out of their heavy Winter Suits into something smart and handsome and made for the Spring. Here is news for mothers who are foresighted. For a group of handsome Sailor Suits of the sort that we will be selling readily later for $3.50 each are here now for

$2.50 Apiece—A Clean Dollar Saving.

They are made of first rate serges in the sailor blouse style that is the handsomest possible wear for little fellows of 3 to 10 years. Colors are navy blue, royal, brown and red; collar trimmed with rows of braid or embroidery; trousers lined throughout.

Boys' $1.00 Trousers at 55c.

Short lengths of fine woolens made into short Trousers. Fine grades of fancy cheviots and cassimeres in stylish stripes, over plaids and neat mixtures. Rich, dark colors that look well and show soil least. Strongly made—we had every pair silk stitched and taped, finished with patent waist bands and bone buttons. Close to half value at ..... 55c.

Second floor, rear, East Building.

Change of name of Burglar Immunity Company, Philadelphia, Penn., to International Burglar Immunity Company, was made.

NOTES OF INSURANCE INTERESTS.

As a result of the sale of the Harpers' holdings in the North German Fire Insurance Company to A. and L. A. Loeb of Chicago, these officers have been elected for the year: President—Adolph Loeb; Vice President—Leo A. Loeb; Second Vice President—W. J. Wollman; General Manager and Secretary—Henry C. Timm.

The London correspondent of The Chronicle says regarding industrial insurance in Britain: "More than 20,000,000 policies are in force, the premium income being $46,000,000 and the amount insured not very far under $1,000,000,000. The average insurance is only two-fifths of what the average industrial policy is in the United States."

The St. Louis Fire Underwriters' Association has chosen these officers: President—W. G. Day; Vice President—J. S. Kendrick; Second Vice President—W. A. Galentine; Secretary—George Benham; Treasurer—Nathan Kaufman.

James H. Mollock, Treasurer of the National Union Fire Insurance Company of Pittsburg, has been elected President of the company to fill the vacancy due to the death of James W. Arrot.

Pennsylvania Bond Conversion.

The announcement was made yesterday that the Pennsylvania Road's Directors had adopted a resolution giving to the holders of its 3½ per cent. convertible gold bonds the privilege of converting the same into capital stock at $70 per share between March 16 and April 4, 1903. These bonds are an issue of $50,000,000, bearing date of Nov. 1, 1902, and running for ten years. Under a resolution adopted by the Directors on March 12, 1902, these bonds were to be converted at holders' option, not before May 1, 1904.

Stock Exchange Firm's Successor.

The Stock Exchange firm of Groesbeck & Sterling has been reorganized, owing to the death last November of Joseph A. Sterling. The successor firm will continue under the style of Groesbeck & Co., the partners being Ernest Groesbeck of the Stock Exchange, Albert N. Hary, and Walter F. Gardner.

Hudson River Day Line Director.

Talcott C. Van Santvoord has been elected Director of the Hudson River Day Line in the place of Harvey F. Farrington, deceased.

RIEDY.—Jan. 25, at 1,456 Amsterdam Avenue, Michael Riedy, native of Templeglanton, County Limerick, Ireland.

RILEY.—Jan. 26, at 371 Sackett Street, Maria Gaffney,

BIG EVENTS IN ROWING

Philadelphia Will Make a Strong Bid for the National Regatta.

Quaker Oarsmen Subscribe the Money for Its Cost—Interest in Coach Ward's English Rigging Experiment.

Special to The New York Times.

PHILADELPHIA, Jan. 31.—The first obstacle has been removed for Philadelphia to secure the National regatta, as Commodore William Innes Forbes of the Schuylkill Navy announced to-day that the eleven boat clubs which comprise the navy and the local devotees of amateur rowing had practically promised to subscribe $1,700, the amount necessary to defray the cost of the big aquatic spectacle.

A delegation will wait on the Executive Committee of the National Association of Amateur Oarsmen, which meets in New York in March, to present Philadelphia's invitation. Although Worcester, Mass., Washington, D. C., and Saratoga, N. Y., are already in the field for the event, the Quaker City representatives expect little trouble in obtaining a majority vote in their favor, as past experiences have taught the latter that Philadelphia is the ideal place for deciding the yearly championships.

While nothing definite was accomplished at the meeting of the Stewards of the American Rowing Association held to-day at the office of Thomas Reath, in this city, those present discussed in every phase the proposed regatta which is to be rowed over the national course on the Schuylkill River during the month of July, and the points at issue will have to be ratified by the Stewards before the public will be permitted to know just exactly what will comprise the first American Henley.

Thomas Reath, Commodore William Innes Forbes of the Schuylkill Navy, Charles W. Packard, Dr. J. P. Hutchinson, Dr. J. William White, Thomas De Witt Cuyler, and Edson F. Gallaudet, are the Philadelphia members of the Board, and much of the detail of the regatta will rest on their shoulders.

At the conclusion of the meeting to-day Mr. Reath said that there was absolutely nothing to be made public at this time, as the meeting was merely an informal gathering of those stewards who could conveniently attend, and that within a week or ten days the public and the press would be informed as to the doings of the Board.

It was subsequently learned from an unofficial source that the members of the board drove through Fairmount Park and inspected the National course over which the regatta will be rowed, and that during the informal meeting the following details were discussed at length: To change the date of the regatta from July 2 to July 1; to arrange a programme of events that will be especially attractive to school and college crews as well as other amateur oarsmen; to make the distance identical with the English fixture, and to classify the events so that both scullers and sweep oarsmen will receive generous treatment.

Oarsmen and the followers of the good old sport of rowing arranged for the season's regattas while the cold weather makes it impossible for them to enjoy the sport. It is at this season of the year that the man who really has the interests of rowing at heart works his hardest for what he believes to be a righteous cause. The blighted hopes of the season and its misfortunes can generally be traced to the mistakes that were in the plans made in January and February.

In consequence of this the affairs of the rowing world are of especial importance now, and such is likely to be the case of the meeting of the New England Amateur Rowing Association, which will be held on Wednesday.

There was considerable trouble at the election of officers of this association last Winter, and it is said that President Harold P. Wardwell will not be a candidate for re-election, and that W. S. Youngman will be nominated for the position. If Wardwell is a candidate, he will not be opposed, but there is apt to be antagonism to Youngman. The fight for National Association honors, which lies between Youngman and Walter Stimpson, has left a bitter feeling, and Stimpson's friends will contest against Youngman.

Philadelphia oarsmen are firmly convinced that the great event will go to the Schuylkill course. This statement is based on a careful canvass of the various clubs in the Schuylkill Navy. The delegates of all the clubs were instructed to vote for Philadelphia's application at the meeting of the Naval Board held on Jan. 19. The matter will be put before the meeting of the Executive Committee of the National Association when it meets in this city on March 17. The Philadelphians named Friday and Saturday, July 10 and 11, as the dates preferred. Such an arrangement would place great regattas very near together within the limits of Philadelphia, the American, on July 7, as just suggested by the stewards; the People's on July 4, and the National on July 10, which would give more rowing in Philadelphia than ever before in any one place in the United States.

This the Philadelphians regard as an argument in their favor, as a crew could then visit the Quaker City and compete in all three regattas, using the People's to gain confidence and, incidentally, an elaborate medal. Next year the National Regatta is as good as pledged to St. Louis, but it is generally believed that if the combination of delegates proves to be extremely good it may be that St. Louis will not get the regatta, as the National governing body will change the constitution of the association at the 1904 meeting. The movement for holding the National event in one place is steadily growing in force, and with a change in the financial management of the body the Philadelphians believe that they will be able to expense-fully bear the expense.

There is a movement to make some several changes in the aNtional's affairs which will greatly decrease expenses and place a large sum annually at the disposal of the committee, and which can be used toward defraying the actual expenses of the regatta.

ROWING AMONG THE COLLEGES.

Outside of the amateur rowing clubs, the collegians are beginning to show more than the usual activity. Midshipman Paul H. Freyer, manager of the Naval Academy boat crews, has announced an elaborate schedule of boat races to be rowed by the middies during the coming season. That for the first crew is: May 2, University of Pennsylvania; May 9, Yale; May 30, Georgetown. The second crew will race the Pennsylvania Freshmen on May 2, the Yale or the Navy Varsity contest, and Midshipman Freyer is working hard to get a race for the No. 2 crew with Georgetown's second. Last year Harvard raced the middies, but it is probable that the Crimson will not meet them this year.

The Naval Academy has been somewhat crippled in its varsity list as Freyer and Nichols, two of the best oarsmen the academy ever produced, were graduated last year. Nichols proved himself a superb stroke, while Freyer acted as Captain-coxswain. Bingham and Cooper, another coxswain and stroke graduated, Schlabach has a broken shoulder from football, so that only a few members of last year's crew are left. There are, however, a number of promising men who rowed at odd times or stood during last season, and with any sort of improvement on their part and a large new class to draw upon, the chances for Annapolis are good. Lieut. J. W. Timmon, Captain of the '98 crew, will act as head coach, assisted by Freyer. The most disappointing feature of the situation at Annapolis is the refusal of the surgeons to allow Frets to enter the boat. He is probably the best oarsmen now at the Naval Academy, but the doctor say the heart action is weak, and though he could play football he will not be allowed to row in the crew.

There is a lot of grit exhibited by the oarsmen connected with the University of Pennsylvania, and Coach Ellis Ward has twenty-five candidates under consideration for the call for Winter's practice. The outlook rather bright for Pennsylvania this year, because seven of the old varsity eight are in active practice, and of the varsity four and the entire freshman crew. Rowing machines have been placed in Franklin Field, and Coach Ward is placing the men while Ward instructs the lot, instructing them daily in the rudimentary principles of his system. Both are sanguine regarding the outcome of the season's races, as Pennsylvania has never had such a strong aggregation to pick a crew from.

Last year at this time Pennsylvania had men who had sev experience at stroke. This year she has two in Kane and Hildebrand. The stroke position will be a hard one to fill, as the men, Zane and Hildebrand, stroke last year during the first of the season, while Hildebrand was in at the latter part. As the men stand at present, Hildebrand has a slight advantage. Of last year's crews, the following men will be eligible: From the Varsity eight, Zane, Gathcart, Eckfeldt, Allyn, Gardner, Eisenbrey, and Hildebrand; from the Varsity four, Jackson, Robinson, Lea, Shisler; from the freshman eight, Whetstone, Kinard, Cabeen, Rogers, Leedom, Bogardus, Crowell, Howard, and Smith.

WILL TRY ENGLISH RIGGING.

Coach Ward will give the English style of rigging a trial this Spring, and if it is efficient will adopt it.

This is the most important feature of the practice season and is being watched with great interest by oarsmen all over the world. Should Ward be successful the results will have influence upon the future rigging of American eight-oared shells. Ward has practically started out to settle the disputed comparative values of the English and American styles of rigging by means of a shell which is so constructed that it can be rigged either way. The mode of seating which prevails in America is the placing of the slides in a line down the centre of the shell with a long outrigger to give the proper leverage. In this it differs from the English style, which is to place the seat as far as possible from the centre of the boat and away from the outrigger and gain the same leverage as does the American with a much shorter outrigger.

The first American shells were all fitted with seats set in the English fashion, for they were either made in England or copied after English models. But this set-over fashion, as can be easily seen, requires that the crew be very evenly balanced in their weight or the boat will not keep an even keel. In university crews this did not prove a great obstacle, for men could be selected with regard to their weight. In rowing clubs, however, and especially in scrub crews, it was found to be a great disadvantage, as frequently the men available did not line up quite right in their weights. For this reason the seats were set on a line, and gradually all American shells began to be rigged that way.

The greatest objection to the American style is the long outrigger which puts a great strain on the sides of the shell, so it cannot be made very firm without heavy irons and elaborate bracing. Even with the best bracing the whole boat quivers slightly at the catch and lessens the force of the impact of the oar on the water, thus marring the absolute rigidity which is very important at this part of the stroke.

Discussion has waxed long and violent over the relative merits of these two points, and it looks as though Ellis Ward were going to decide the matter. The new shell he has had constructed has the regulation long American riggers and also the short English ones, allowing the shell to be easily rigged in either fashion without much trouble. By rowing the same eight in each style for some weeks and comparing the time trials over the same water and under the same weather conditions, he will be able to get very near the truth of the matter. The new boat was made by Davy of Boston. It has been tried by the old Varsity eight in the English style, and they pronounced it much better than the American method. If the English style is found superior, American rowing methods are likely to be changed because of this experiment.

The standing of the teams in the Knights of Columbus Bowling League, which closed last week, is as follows:

Councils.	Games Won.	Games Lost.	High Score.
Castilian	23	4	836
McGivney	22	5	848
Riverside	21	6	841
Congress Own	17	11	853
New Amsterdam	15	13	882
Geron	15	13	861
St. Nicholas	15	13	843
Regina Coeli	15	13	809
Alnaitante	15	13	816
Salve Regina	13	15	797
Lacedaire	13	17	791
San Salvador	9	19	807
Mystic Rose	7	21	842
Vera Cruz	6	22	720
New York	1	27	688

The winners of the various prizes are as follows: First team prize, Castilian Council; second team prize, McGivney Council; third team prize, Riverside Council.

High team score prize, (outside of first, second, and third teams,) New Amsterdam Council.

First individual high score prize, Thomas F. Carroll, San Salvador Council; second individual high score prize, John A. Lee, McGivney Council.

First individual high average prize, Harry F. Feeley, Castilian Council; second individual high average prize, John H. Davis, New Amsterdam Council.

Southern Golf Association.

CHATTANOOGA, Jan. 31.—The Executive Committee of the Southern Golf Association met in this city to-day, all the members being present. It was decided to hold the next tournament in Asheville, N. C., May 20-23, inclusive, and the annual election of officers will be held at that time.

IN THE REAL ESTATE FIELD

Wider Range of Business Makes Outlook More Promising.

Corner Sold at Eighth Avenue and 42d Street—Buyer for Fine Residence on East 53d Street—Other Dealings.

Signs of a rapidly expanding market have not been lacking during the last week. Large speculative purchases are still noticeably absent, with the possible exception of the deal involving the block front on Central Park West, between Sixty-second and Sixty-third Streets, but the great variety of transactions contained in the news of the last four or five days should make it apparent that the general interest in real estate, just at present, both professional and otherwise, is sufficiently widespread to lead to a large volume of business, even although a few speculative centres do not command their usual positions of prominence.

Residential property in the Fifth Avenue section, both in the "fifties" and in the "sixties" east of the Park, is still enjoying a remarkable period of activity, some of the buying being for occupancy and some of it obviously speculative. The two stables at 9 and 11 East Fifty-second Street have been bought, sold, and traded within the last two weeks at a rate that has made the naming of their respective owners at any particular moment a very hazardous undertaking, but the outcome of it all seems to be that Harley T. Procter has secured No. 11, that No. 9 is in the hands of a speculative company, and that the prospect is better than ever for the tearing down of all the stables and replacing them with dwellings. Charles W. Morse sold his house at 720 Fifth Avenue to Mrs. Albert Blatchford. Augustus D. Juilliard bought 11 West Fifty-seventh Street from the Archbolds estate, and there is likelihood that the Criterion Club will take Mr. Juilliard's dwelling, at 684 Fifth Avenue. In the district north of Fifty-ninth Street buyers were found last week for a corner at Madison Avenue and Sixty-fifth Street and for 35 East Sixty-seventh Street. It will doubtless be very good news to those interested in the future of Central Park West to learn that the block front between Sixty-second and Sixty-third Streets, for which a gigantic amusement enterprise had been planned, will probably pass shortly into such hands as will insure some development of it more in keeping with its future possibilities. The Spanish game of lotto might take New York by storm, but that has never been any good reason why the experiment should be tried with a block on a thoroughfare which is destined to become one of the finest in the city, so far as the general character and appearance of its buildings are concerned.

The purchase of 235 to 239 West Thirty-third Street, together with an abutting lot at Thirty-fourth Street, is of some significance, as it is one of the first transactions coming from that part of the Pennsylvania Railroad district, west of Seventh Avenue. The development of the section between Seventh Avenue and Broadway and north of Thirty-fourth Street has been looked upon as a certain outcome of the Pennsylvania enterprise, with the improvement of much of the surrounding territory assured at a more remote date, but whether there is yet any justification for a high scale of speculative values west of Seventh Avenue may well be questioned.

Current delay in vacant property is for the most part confined to sites north of One Hundred and Tenth Street suitable for improvement with six-story apartment houses, although the largest deal in lots effected within the week involved the block front on the west side of Madison Avenue, between One Hundred and Seventh and One Hundred and Eighth Streets.

John H. Berry has sold in conjunction with Voorhees & Floyd, 35 and 37 Wooster Street, five-story stone-front business buildings, 50 by 100, which Lorenz Weiher recently took in part payment for the West Point apartment house on Ninety-fifth Street, near Riverside Drive. The buyer is Otto Lindemann.

George A. Bowman & Co. were the brokers who negotiated the twenty-one-year lease of the six-story building 22, 24, 26 West Thirty-fourth Street to The Morning Telegraph.

Latest Sales by Brokers.

The estate of Casper Levy is reported to have sold 661, 663, and 665 Eighth Avenue, northwest corner of Forty-second Street, three four-story brick buildings, on plot 60 by 75, to Volk Brothers. The buyers are now the tenants of the corner building under a lease having nine years yet to run. William Volk would neither confirm nor deny the report yesterday afternoon.

Frederick Zittel has sold for James A. Frame & Son 8 East Eighty-third Street, a new six-and-one-half-story American-basement dwelling, on lot 27 by 100. This house is building for the residence of Willis S. Coe and is directly opposite those of the late Hicks Arnold and Frederick Constable.

Pease & Elliman have sold for Mrs. Edmund Carleton the dwelling 62 West Forty-ninth Street, 25 by 100, Columbia College leasehold, to Lawrence E. Brown of the firm of Hone & Brown.

E. A. Cruikshank & Co. have sold for a client the four-story brick building 67 Fulton Street, on lot 23 by 96.

Porter & Co. have sold for Frances S. Quintard to Charles F. Bechtold the four-story brick stable 134 to 140 West One Hundred and Twenty-fourth Street, on plot 100 by 100.11. The sale includes the real estate, chattels, and good will of the business. The price is reported at about $140,000.

Sylvan Cronkow has resold for Eugenia de Klingenstein to Julius, Charles I., and Max Weinstein the block front on the west side of Madison Avenue, between One Hundred and Seventh and One Hundred and Eighth Streets, 200 by 110. The buyers will erect five six-story apartment houses on the property.

Klein & Jackson have bought from the estate of Caroline Lorillard Wolf 532 and 536 Seventh Avenue, two three-story buildings, 18.9 by 75 and 23 by 59, respectively. They have also secured under option Nos. 454 and 456.

L. H. & J. W. Slawson have sold for Sidney C. Moss to a client of Slawson & Hobbs a four-story dwelling, 22 West Forty-seventh Street, 20 by 100.5.

John A. Mitchell has sold his stable and studio building on the south side of Fifty-second Street, 275 feet east of Sixth Avenue, on lot 25 by 100.5, and has bought from Daniel S. Freedman the lot, 25 by 100.5, on the north side of Fifty-second Street, 275 feet east of Seventh Avenue, upon which he will erect a new stable.

Charles De Bois has sold for the Empire City Realty Company to a client 535 West One Hundred and Forty-eighth Street, a three-story dwelling, formerly owned by District Attorney Jerome.

Samuel Green has bought and resold to Isaac Harris the two five-story flats 61 and 63 East Ninety-ninth Street, 50 by 100.11.

J. N. Kelley & Son were the brokers in the sale of the warehouse at the southwest corner of Washington and Hubert Streets to James Butler.

The southeast and southwest corners of Sixth Avenue and Thirty-eighth Street, sold at auction on Thursday, were bought by Justice P. Henry Dugro and Adam Engel, respectively.

W. D. Morgan & Co. have sold to M. Kahn the five-story flat 211 West One Hundred and Twentieth Street, on lot 33 by 100.11.

Nieberg Brothers have bought the northeast corner of Avenue D and Houston Street, old buildings, on plot 44.6 by 70; also, the northeast corner of Clinton and Henry Streets, old buildings, on plot 46.6 by 85.

Lewis Bloch has bought the old buildings 237 to 241 East Ninth Street, on plot 50 by 92.

Joseph Martinson has sold for William Zuckerman to Samuel Weiss, for $15,000, the property 116 Avenue C.

Harry N. Mohn was the broker in the sale of the dwelling 1,195 Madison Avenue for Eugene Vallone to Isidor Heilman.

J. Clarence Davies & Co. have sold for James Meehan the three-story frame house, on plot 26 by 150, on the west side of Prospect Avenue, 125 feet south of the Boston Road; also, for George Hollerith the three-story brick dwelling 424 East One Hundred and Eighteenth Street, 25 by 100.

Leo Rather has purchased, for improvement, 113 Greenwich Street, southwest corner of Jane Street, 20.4 by 70.10 by 48.6 by 69.2.

The Auction Room.

Even the fiercest believers in that section of Sixth Avenue between Thirty-fifth and Forty-second Streets were surprised at the prices realized at Thursday's partition sale of the Hart estate properties. For the southwest corner of Sixth Avenue and Thirty-eighth Street, 24.8 by 60, $80,500 was paid, or at the rate of over $130,000 a lot. On the opposite corner, the southeast, a plot 60 by 43 brought $191,000, a figure very nearly as high when due regard is had for the fact that the southwest corner is a very small plot, and is situated in a block which has a Broadway frontage. James J. Coogan bought 763 Sixth Avenue, 25 by 75, for $30,000, which shows if anything a little advance over recent prices for a lot of that size north of Forty-second Street.

Several partition sales promise to make this week the most interesting so far this year. The most important announcement is that made by Auctioneer Wells, who will sell on Tuesday the holdings of the late George F. Gilman, the eccentric merchant, whose death in Connecticut some-thing over a year ago led to lively controversies over his estate. His properties in this city, which are described in detail in the subjoined schedule, consisted for the most part of tenements on the middle west side, from Twenty-fifth to Forty-seventh Street.

There is also listed for Tuesday a foreclosure sale of the southwest corner of Amsterdam Avenue and One Hundred and Eightieth Street, as well as a partition offering involving the southwest corner of Park Avenue and One Hundred and Seventeenth Street, and a lot 75 by 100, on the south side of Seventy-first Street, between Avenues A and B.

On Wednesday Auctioneer Kennelly will sell in partition the southwest corner of Third Avenue and Fifty-fourth Street, and the frame flats, 240 to 4,356 Park Avenue, northwest corner of One Hundred and Seventy-fourth Street.

The old Greenwich Village section contributes a promising group of properties to Peter F. Meyer's list for Thursday in the shape of the southwest corner of Hudson and Bank Streets, the northwest corner of Bleecker and Morton Streets, and 207 West Eleventh Street.

There were recorded last week 257 mortgages for $11,413,678, of which 78, for $7,844,254, were at 5 per cent., 101, for $2,375,169, were at more, and 81, for $3,839,255, were at less. In the corresponding week last year there were recorded 270 mortgages for $3,024,731, of which 76, for $1,290,539, were at 5 per cent., 64, for $629,092, were at more, and 78, for $2,014,250, were at less.

AUCTION SALES THIS WEEK.

To Take Place at 111 Broadway, Unless Otherwise Specified.

MONDAY, FEB. 2—By James L. Wells, partition sale, Alfred E. Ommen, referee, 341 East One Hundred and Fifth Street, north side, 185 feet west of Second Avenue, 16.8 by 100.9, two-story frame dwelling.

THE WEATHER.

WASHINGTON, Jan. 31.—The plateau low pressure has spread eastward and southward, but still covers practically the whole of the plateau and Rocky Mountain region. There are several centres of minimum pressure, one over Minnesota, another over British Columbia, and the third over the middle Rocky Mountain region. The southern high pressure has moved eastward, its crest being off the South Atlantic Coast. There has been very little precipitation east of the Rocky Mountains. Local rains have fallen in Texas and rain or snow on the Pacific Coast and in the plateau region.

It is considerably warmer tonight in the Ohio Valley, the lake region, and the Upper Mississippi Valley, and somewhat lower temperatures prevail over the northeast Rocky Mountain slopes.

There will be rain Sunday in the Middle and Lower Mississippi Valley and the Southwest, and snow in the Middle Rocky Mountain region and the Upper Missouri Valley. There will be rain Monday in the lake region, the Ohio Valley, and the Gulf States. Warmer weather will prevail Sunday in the lake region, and temperatures will rise slowly in the South Atlantic States. It will be colder in the extreme Northwest, the Upper Missouri Valley, and the Middle Rocky Mountain region. It will be colder Monday over the eastern slope and the Southwest.

The winds along the Atlantic Coast will be mostly light to fresh west; on the Gulf Coast fresh southeast, and on Lake Michigan fresh to brisk south.

Steamships departing Sunday for European ports will have fresh west winds and fair weather on the Grand Banks.

FORECAST FOR SUNDAY AND MONDAY.

Delaware, District of Columbia, Maryland, and Virginia, fair Sunday and Monday; light to fresh southwest to south winds.

Western New York, fair Sunday; Monday, rain; fresh southeast to south winds.

Iowa, fair Sunday; Monday, rain and colder.

New England, fair Sunday and Monday; fresh west winds.

Ohio, partly cloudy and warmer Sunday; Monday, rain; fresh southeast winds.

Eastern New York, Eastern Pennsylvania, and New Jersey, fair and warmer Sunday; Monday, rain; fresh west to southwest winds.

Western New York and Western Pennsylvania, fair and warmer Sunday; Monday, rain; fresh south winds.

Upper Michigan, fair in east, snow or rain in west portion Sunday; Monday, fair, except snow along the lake shore; fresh southeast winds, becoming northwest.

Indiana, fair and warmer Sunday; Monday, rain; fresh

INCOME POSSIBILITIES.

As practical men, actively in touch with the best elements in the city's regular development, we know that any investor, controlling small sums or large, can secure a permanent, liberal income from real estate holdings.

And we know further that properties now unproductive can quickly be made a source of profit.

We are securing LARGER INCOMES for our clients. Talk with us. Our suggestions are worth something, and cost nothing.

**Ashforth & Co.,

GOSSIP OF THE TROTTERS

Local Horse Owners Preparing for the Coming Season.

Amateur Championship Gold Cup Presented to E. E. Smathers—Aspirants for Speedway Honors This Year.

Jack Curry, who for the past couple of years has trained the fast horses of David Lamar's racing and speedway stable, has signed an agreement to go to Kirkwood, Del., and train the horses in Dr. J. C. McCoy's stable. There are several 2:10 trotters in Dr. McCoy's string, and one very promising green mare which Curry says he has great faith in.

***

Among the many who greeted C. K. G. Billings on the pier last Wednesday morning, when he arrived from Europe, was Charles Tanner, who has charge of his road and matinee horses now wintering at Cleveland, Ohio. Mr. Tanner reported that the entire stable of some thirty-odd trotters and pacers was in prime condition. They will probably be shipped to Memphis, Tenn., for early Spring training, and later to the Empire City track at Yonkers.

***

When the New York Driving Club was organized John F. Cockerill was among the first of New York's prominent road drivers solicited for membership, but he declined on the ground that his first duty was toward the Road Drivers' Association, of which he was President, and that when he had accomplished the task which he had undertaken in that body he would join the Driving Club. In some unknown manner a report was circulated to the effect that the two organizations were not on the best of terms and that was the reason for Mr. Cockerill's refusal to join. This, however, was denied and condemned as idle gossip, and in order to prove the falsity of the stories Mr. Cockerill, who says the Road Drivers' Association is well on the road to success, has become a member of the Driving Club.

***

Among the well-known horsemen who attended last week's sale at the Garden daily was Louis J. Kahn, former owner of the crack pacer, George Wallace, who is looking for a trotter capable of pulling his weight over the Speedway and staying in the front ranks. Mr. Kahn says he has his eye on a trotter that would make the best of the Speedway favorites show their top speed, but that the owner thinks more of the animal than he does of a good fat price.

***

Dan Patch, the pacing wonder of 1902, with a mark of 1:55¼, has been insured by his new owner, M. W. Savage, for $112,000. Not since harness racing became a favorite pastime among lovers of the light-harness horse has there been such a great pacer as Dan Patch. He has not lost a race since he first appeared on the track two years ago, and in the many heats in which he was started he has been beaten in but two. In the first heat of a race at Lafayette, Ind., in September, 1900, he was passed by Alix in 2:18¼, and at Brighton Beach last year Martha Marshall finished in front of the pacer in the phenomenal time of 2:00.

***

E. H. Harriman, who recently disposed of his handsome and well-appointed Speedway stable at One Hundred and Fifty-fifth Street and St. Nicholas Avenue, has leased his famous pacing stallion John R. Gentry, 2:00¾, to George C. Brown of Spring Hill Farm. The former champion will be kept for two years on the farm where Star Pointer's sire is owned.

***

George H. Huber, who recently shipped his Speedway stable to the Ti Point stock farm of which he is owner, reports that the 106 races at the Port Ti Trotting Park have proved a brilliant success.

***

By way of a novelty, there is some talk of racing trotters under the saddle at the Empire City track during the coming season. Trots of this kind were held some years ago on a miniature track in Madison Square, but Mr. Many says he recorded as being stepped in 2:35 on this track, and, considering the number of laps required to make a mile, the performance was a very creditable one.

***

The League of Amateur Driving Clubs is compiling, and will soon publish, a year book containing complete reports of all harness races decided on tracks in membership with this organization during the season of 1902. One of the features of the volume is to be the portraits of well-known trotters and pacers and their owners.

***

For the past two years the Road Drivers' Association of New York has stimulated competition among the owners of trotters and pacers by offering a speedway championship to be awarded to the trotter and pacer that won the majority of heats against all comers. The Monk, while the property of Frederick Gerken, received the first award, and E. E. Smathers's unbeaten trotting champion Queen Wilkes carried off the second award last season (by the way, Kingmond, 2:08, owned by Claus Bohling, caused quite a sensation by winning four straight contests for the coveted title against a very fast field, and was proclaimed the victor. Kingmond, however, never met either The Monk or Queen Wilkes in the contests, or the results might have been different. Two of the champions—Queen Wilkes and Kingmond—will be in the field this year, so that the result is by no means a foregone conclusion. There are also several new candidates for the honors, among them being the handsome chestnut mare Imogene, 2:11¾, owned by C. K. G. Billings, who was one of the most prominent matinee winners last season, and Alice Barnes, 2:16¾, who has long been considered the fastest trotter that ever entered on the Speedway. Alyen, 2:09¾, owned by Nathan Straus, has always been a contending factor in every championship, and M. C. Harrison has a candidate in Axtello, 2:15.

***

President John F. Cockerill, of the Road Drivers' Association, has announced the following nominating committee to make nominations for the annual election to be held in March: Dr. H. D. Gill, David Lamar, W. G. Floyd-Jones, Patrick Ryan, J. A. Megargee, H. C. Mapes, George Buckman, and George J. Crossman. George W. Grote seems to be a very popular candidate for the office of President, and although President Cockerill has not declined to run, he says he would withdraw in favor of Mr. Grote.

***

The amateur championship gold cup which was won by Lord Derby at the September meeting at Empire City track was presented to the owner of Lord Derby, E. E. Smathers, at his apartments in the Pierpont Friday afternoon. In the race with The Monk as contestant, Lord Derby won three straight heats, which were the three fastest heats ever trotted on a race track, the time being close in 2:06. The presentation was made by John Butler, President of the New York Driving Club, who was accompanied by Charles Lloyd and Secretary Alfred Reeves. Mr. Smathers gracefully accepted the valuable trophy with a few appropriate remarks, and drank to the health of Lord Derby and the prosperity of the club. Mr. Smathers will sail for Europe about Feb. 15.

***

F. G. Schmidt, who on Thursday purchased the crack trotter A. J. D., 2:00¼, at the Garden sale, has turned the animal over to the care of Bob Davis, who starts south to-morrow with a string of eighteen. They compose about the best collection of campaigners any trainer can show, among them being the trotters Chain Shot, 2:08¾; Vine Leaf, 2:09¾; Mind Reading, 2:11; Mike Farley, 2:10¾; Dark Secret, 2:7½, and the pacers Coney, 2:02; Bardina, 2:10; Tommy Wilton, 2:12¾; John W. Patterson, 2:16¾; Darling, 2:22¾, and Mercury Wilkes, 2:14¾. All will winter in the South and return to the Empire City track for fast work early in the season.

Eastern Bowlers Favored.

INDIANAPOLIS, Ind., Jan. 31.—At the request of Thomas Curtis of Brooklyn and his colleagues of New York and other eastern bowlers, the placing of the entries for the National bowling tournament here has been extended from Feb. 1 until Feb. 7. The all-three game was sufficient to have success of the tournament, but the request was granted in deference to the New Yorkers, whose preliminary arrangements were held back by a misunder-

Instruction.

"NOTHING SUCCEEDS LIKE SUCCESS!"

MILLER SCHOOL 1133-1135 Broadway New York

When a school has reached that point in public favor that it is sought by the leading railroads, the banks, the city departments, and the large business houses, it goes straight to it for the various clerks needed, is a sure sign that that school IS A SUCCESS. On January 14, 1903, one of our night students, by name William Houck, was appointed private secretary to the President of the Board of Elections, at a salary of $1,800 a year. A few months of evening study did it. The Police Department, the Fire Department, the Bridge Commission, and other City Departments are employing stenographers and bookkeepers trained by the Proprietor of this school. The same is true of the Corn Exchange Bank, the Chase National Bank, the Fifth Avenue Bank, the Fifth Avenue Trust Co., the Astor Place Bank, the Morton Trust Company, and other financial institutions. It is also true of the Pennsylvania, the Lehigh Valley, the D., L. & W., the New York Central, and various other railroads. The MILLER METHODS prevailing in this school are responsible for its great success. Ranking with the largest schools in the United States, and possessing the most modern and complete equipment in New York, it is but natural that our graduates are proud of the school, and want their friends to attend it. We have daily calls from business men for our graduates.

SHORTHAND, TYPEWRITING, BOOKKEEPING, ARITHMETIC, WRITING—all the business subjects are taught by experienced and expensive teachers in both the day and the night sessions. This is no place for cheap talent of any kind. It is a wide-awake, energetic, and progressive school in every sense of the word. Send for our booklet. DAY AND NIGHT SESSIONS.

EASTMAN Poughkeepsie, N. Y. All Commercial Branches Taught Thoroughly.

N. B.—The February graduates of the Public Schools are eligible to compete for the Free Scholarships awarded each year by the President of Eastman, to a limited number of the girls and boys who have completed their Grammar School studies. Write for particulars. CLEMENT GAINES, President.

Employment Department for Graduates.

Pianos and Organs.

Greatest February Piano Sale!

At $1 a Week

we offer one of these popular, renowned, tone-lasting

Harmony Pianos.

The response to this announcement will be enormous, and, as we advise an early selection, if you care, we advise an early inspection of the Harmony Pianos offered to the public.

Harmony Pianos, including steel and cover, for $175, on the easy terms of $5 down and $1 a week.

Instruments which cannot begin to compare with the Harmony are sold daily by musical dealers at from $500 to $1,000 each. Therefore, we can confidently say that the terms to you here is from $150 to $300.

The celebrated Harmony Piano, Grand Upright Piano built by the most skilled piano makers in the world. The cases are wrought in the new Sonnite design, beautiful in the finest mahogany, rosewood, oak or walnut. Harmony Pianos are fitted with actions which are so near perfection as human skill can make them. Keys of ivory, sounding board, pedals, metal bridges, fitted with automatic self-regulating pressure action; 7-1-3 octaves, new Boston scale, full iron frame, Blake, Boston and melodious tone, which improves with age. The touch is most elastic and responsive.

The Harmony Piano will be delivered upon the first payment of $1.

Our Ten Years' Guarantee inserted in gold letters on the inside rim $50 of the case.

LAKEWOOD'S GAY SEASON

Gymkhana Games Being Arranged for Lenten Saturdays.

Elaborate Programme of a Coming Kirmesse—Other Social Events—John D. Rockefeller's Gift to a Church.

Special to The New York Times.

LAKEWOOD, N. J., Jan. 31.—Lakewood's Lenten visitors will not lack for entertainment during the penitential season. J. J. Dwyer, the well-known Master of Hounds of the Ocean County Hunt, is arranging a series of gymkhana games to be held on Saturday afternoons during March on P. S. F. Randolph's grounds on the Toms River Road. Mr. Dwyer has enlisted the support of many of the society people in the project, and its success is already assured.

The society people of Lakewood filled the pretty theatre of the Lakewood Hotel at the entertainment given there on Thursday evening by the Boys' Club of Lakewood. The purpose of the entertainment was to raise funds to furnish a clubroom for the boys of the village, and to provide healthful recreation and amusement for them. It was a great success financially, and the entertainment furnished by the boys was greatly enjoyed by the large audience. Among the patronesses of the club are Mrs. Mary Kingdon, Mrs. Henry Lloyd Herbert, Mrs. Henry A. James, Mrs. Ernest Edward Matthews, Mrs. Arthur B. Claflin, and Mrs. Clarence Blair Mitchell. Thanks were returned to the management of the Lakewood Hotel by the club for the use of the theatre.

A pool tournament for the women patrons of the Lakewood Hotel is being arranged by the hotel's billiard instructor. Play will begin next Tuesday evening. Pool is the most popular indoor diversion among the Lakewood Hotel's women patrons these days. Among those who have shown proficiency in handling a cue is Miss Alice Torrance of Philadelphia, who made a run of eighteen balls on Wednesday evening.

John D. Rockefeller's hobby of giving so as to induce others to give also has accomplished a result which is very gratifying to the congregation of the First Baptist Church in this village. A few weeks ago the pastor of the church, the Rev. W. G. Wedemeyer, in a sermon preached on the tenth anniversary of his pastorate, called attention to the fact that there was a debt of $5,000 remaining on the new edifice. Mr. Rockefeller, who is a regular attendant of the church when he is here, was present at the service. A few days later he wrote to Mr. Wedemeyer, offering to pay half the debt if the church raised the remainder. This was accepted, and the members of the church set about raising the money. All but $500 had been subscribed, when a letter was received from Miss Caroline Nash of New York, in which she offered to share the payment of the debt with Mr. Rockefeller. As a result the church is out of debt and has enough money on hand to purchase a new pipe organ.

The formal opening of the new home of the Country Club of Lakewood on Lincoln's Birthday will be quite a society event at Lakewood. There will be a reception in the afternoon, and tea will be served by the ladies. The new clubhouse embodies all the attractions of a country place, with the comforts and luxuries of a club in town. It is said to be the finest building of its kind in the country. George J. Gould is the President.

The kirmesse to be given next Friday and Saturday evenings for the benefit of the Lakewood Public Library and the Village Improvement Association will be one of the important events of the social season at Lakewood. The dances will be given at the Laurel House on Friday evening, and at the Laurel-in-the-Pines on the following evening. One of the pretty features of the kirmesse will be the dance of the Summer Girls by a sextette of the society belles of Lakewood. The Court minuet with twenty-four couples will be another feature. The children's dances include several very novel figures. The kirmesse will conclude with a charity ball on Saturday evening. The committee in charge of this is Dr. Charles A. Lindley, Henry Sanford Coxe, Clair Mitchell and Lewis B. Stillwell. Miss Lila Agnew Stewart of New York is directing the rehearsals for the dances.

The programme has been divided as follows: A children's matinée in the Laurel House on Friday afternoon will be "The Pantomime of Cinderella," danced by Lakewood children. In the evening, at the same place, the Laurel Orchestra will furnish music for dances, in which the following will be the personnel:

Spanish Dance.—Chaperoned by Mrs. W. G. Schauffler, Mrs. Ernest W. Dwyer, Mrs. Jasper Torrance, Mrs. O. B. Huntsman, Mrs. A. F. Stearns, Mrs. Burton H. Lee, Miss Elizabeth Anderson, Burton H. Lee, Albert M. Reed, Stanley N. Whitney, Arthur F. Stearns.

Scotch Reel.—Danced by Beatrice Claflin, Matie Palmer, Dorothy Tracy, Joseph J. O'Donohue, Halliday Philbin, William Leeds, Tyler Palmer.

Serpentine and Fire Dance.—By Mrs. Jasper Lounsbery.

Cinderella Gavotte.—Chaperoned by Miss Lindley and Miss Clara Deshiell—Danced by Beatrice Claflin, Dorothy Tracy, Marie Palmer, Alice Brewster, Louise Lynch, Josephine de Forest, Beatrice Bush, Charles Hudson, Nicholas Brewster, Ridgeley Bryan, Frank Worth, and Arthur Pack.

Flower Dance.—Chaperoned by Miss Ferris and Miss Anna Deshiell—Danced by Hatch Harrer, Mary McNamara, Cicelia Emerson, Minna Pach, Olive Plumer, Gladys Peters, Carleton Cate, Oscar Pach, Bowdoin Plumer, Richard Plumer, Paul Emerson, Archie Harrer.

Dance of the Dresses.—Chaperoned by Miss Ferris and Miss Anna Deshiell—Danced by Alice Brewster, Fairy Queen, and Mary Major, Mercie Hyde, Anna White, Beulah Pack, and Mildred Warden.

The Tarentella.—Chaperoned by Mrs. Horace Waters—Danced by Misses Clara B. Robertson, Margaret de Forest Lyon, Mabel Child, Josephine Sanger, Alva Palmer, Annie M. Burkard, Dolly Lynch, and Mary Ferris.

Shadow Dance.—By Miss Robertson.

Hungarian Gypsy Dance.—Chaperoned by Mrs. William B. Leeds—Danced by Misses Dolly Lynch, Alva Palmer, Alva Palmer Stokes Peters, and Margaret de F. Lyon, and Joseph O'Donohue, Robert A. Bonner, Prescott L. Lyon, and William Stoney, Jr.

Hesitation.—Danced by Miss Nathalie Hatch and Miss Mildred Rawlins.

Dance of the Summer Girls.—By Miss Davis, Miss Lindley, Miss Smidt, the Misses Robertson, and Miss Anderson.

A Triumphal March, including the above, with John Anderson as Court Jester.

On Saturday evening, in the music room of the Laurel-in-the-Pines, some of the kirmesse dances will be repeated, and a minuet of thirty-two couples will open a charity ball.

James Blute, Superintendent of George J. Gould's country place here, returned from San Antonio, Texas, on Wednesday with a carload of polo ponies. Mr. Blute will begin at once to train them for the Spring tournament on the Georgian Court grounds.

Postmaster A. M. Bradshaw has gained free postal delivery for the resort, and as a necessary preliminary the township officers have arranged for a professional name numbering, whose arrival is daily expected. The innovation will be very greatly appreciated here.

A close observer and authoritative student of bird life which is favorably conditioned in and about Lakewood has noted a total of ninety-eight different species of birds within one mile from the Laurel House during his daily walks within the regular season, October to June. His notes, done extending through many years. Some of these birds are rarely found in Winter save at points in the far South.

Miss Katharine L. Hinsdale entertained friends at a recent tea at her Fifth Street home, her guests being Mrs. E. H. Waters, who was the arbiter of table honors; Mrs. H. O. Walker, Miss Oliver, Miss Ferris, Miss Lea Downer, Mrs. W. G. Schauffler, Miss Anna H. Deshiell, the Misses Baldwin, Miss Cornelia Schwartz, Miss Rood, Miss Pixley, and the Misses Glover.

Mr. and Mrs. W. H. McClure of Albany have taken the Alfred H. Deshiel cottage in Sixth Street for the remainder of the season.

Mrs. Ernest Edward Matthews entertained her friends at a tea at her home in Madison Avenue this afternoon.

Mr. and Mrs. Robert Moore of Chicago, who have been staying at the Laurel House since the opening of the season, left here in their private car yesterday for a trip to Southern California. They will spend a few days in Chicago, and will then proceed West.

Patrons of the Hotel Lenox made up a sleighride party to Allaire on Sunday evening. The party included Mrs. E. Brown, Mrs. M. Corbett, Miss E. McIntosh, Mr. Clarence Shinn, Miss Du Pay, Miss Jay Wormer, and Mr. E. O'Leary.

Mr. and Mrs. W. B. Peters and Miss Alice Peters of New York have taken apartments at the Laurel in the Pines for a brief stay.

Mrs. B. F. Butler and Mrs. Howard Butler of New York are among the week's arrivals at the Laurel House.

Mrs. C. H. Woodbury and daughter of New York have taken the Gilpin cottage for the remainder of the season.

Mrs. Boardman of New York is visiting her sister, Mrs. David L. Schwartz, at her home in Forest Avenue.

Mr. L. Baird Laidlaw and Mrs. E. J. Laidlaw of New York are registered at the Laurel House.

H. W. Rising of New York joined Mrs. Rising and Miss Rising at the Laurel in the Pines this week.

Mrs. Amos R. Pinchot and Miss Chatworthy of New York are among those staying at the Laurel in the Pines.

Mrs. James McLean and daughter of New York have taken apartments at the Laurel in the Pines for an indefinite visit.

Mr. and Mrs. Oliver C. Macy of New York journeyed to Lakewood by automobile on Tuesday and registered at the Laurel in the Pines.

Col. George R. M. Harvey of New York came down on Saturday with a party of friends for a few days' golfing and registered at the Lakewood Hotel. Col. Harvey's guests were John Larkin, George S. Coxe, Richard Arthur, and F. A. Duneke. Col. Harvey is an active member of the Lakewood Country Club.

Mr. and Mrs. Ellis Harcourt of Philadelphia will entertain a party of friends at a German supper at the Lakewood Hotel tomorrow evening. Among those invited are Wilton Lloyd-Smith, Miss Lyon, Mr. and Mrs. Herbert Walker, Mr. and Mrs. Frederick B. Torrance, and Mrs. Robert Mahler of New York.

Mrs. Irwin Hewell Hance was the hostess at a tea given at her home in Second Street this afternoon.

CHURCH SERVICES TO-DAY.

Where the name of the clergyman is given he will officiate at the service or services designated.

BAPTIST.

CALVARY, West 57th St., The Rev. Dr. R. S. Macarthur; 11 and 8.
CENTRAL, 42d St., West of Broadway—The Rev. Frank M. Goodchild; 11 and 7:45.
FIFTH AVENUE, 2 West 46th St.—The Rev. Dr. R. F. Johnston; 11 and 8.
MADISON AVENUE, Corner 31st St.—The Rev. Dr. George C. Lorimer; 11 and 7:45.
MARINER'S TEMPLE, Oliver St., Near Chatham Square—10:45 and 7:30. The Rev. Dr. E. Judson; 1:30.
MEMORIAL, Washington Square—10:45 and 7:30. The Rev. Dr. E. Judson; 10:45.
MOUNT MORRIS, 5th Av., Near 120th St.—The Rev. W. C. Bitting; 11 and 7:45.

CONGREGATIONAL.

PILGRIM, Madison Av. and 121st St.—The Rev. Frank E. Rasmuson; 11 and 8.
TABERNACLE, Mendelssohn Hall, 119 West 40th St.—The Rev. Dr. C. E. Jefferson, 11 and 8; Dr. William H. Thomson, 5.

JEWISH.

TEMPLE BETH-EL, 5th Av. and 76th St.—The Rev. Dr. S. Schulman; 11.
TEMPLE HAR SINAI, 5th Av. and 43d St.—The Rev. Dr. Joseph Silverman; 11:30.

LUTHERAN.

HOLY TRINITY, 312 West 57th St.—The Rev. C. Armand Miller; 11.
ST. JAMES, Madison Av. and 72d St.—The Rev. Dr. Rasmussen; 11 and 4:30.

METHODIST EPISCOPAL.

EIGHTEENTH STREET, Near 8th Av.—The Rev. Arthur Anstem; 10:45 and 7:45.
GRACE, 104th St., West of Columbus Av.—The Rev. Dr. Louis Albert Banks; 11 and 8.
HEDDING, 237 East 17th St.—The Rev. J. H. Fitchett; 11; the Rev. J. F. Moore, 8.
JANE STREET—The Rev. Charles Inglis of Logdon, A. M. and F. M.
MADISON AVENUE, Corner 61st St.—The Rev. Dr. Wallace MacMullen; 11 and 8.
METROPOLITAN TEMPLE, 7th Av., Near 14th St.—The Rev. Robert Bagnell, 10:30; Miss Danforth, 7:45.
PEOPLE'S, 61st St., Near 3d Av.—The Rev. Dr. Duncan Dunbar; 11 and 8.
ST. ANDREW'S, 74th St., West of Columbus Av.—The Rev. Dr. James Oliver Wilson; 11 and 8.
ST. PAUL'S, West End Av. and 86th St.—The Rev. Dr. George F. Kalman; 11 and 8.
TRINITY, 118th St., East of 2d Av.—The Rev. Dr. Strobridge; 10:30 and 7:45.
WASHINGTON SQUARE, West 4th St., Near 6th Av.—The Rev. Dr. John J. Reed; 10:30 and 7:45.

PRESBYTERIAN.

ADAMS CHAPEL, 100 Park Av.—The Rev. Dr. Marvin R. Vincent; 4:30.
BRICK, 5th Av., Corner 37th St.—The Rev. Dr. W. R. Richards; 11 and 4:30.
CENTRAL, 97th St., West of 7th Av.—The Rev. Dr. Wilton Merle Smith; 11; the Rev. Wendell Prime Kesler, 8.
FIFTH AVENUE, Corner 55th St.—The Rev. Dr. A. W. Halsey; 11; the Rev. Dr. J. Ross Stevenson, 4; the Rev. Dr. Wilbert W. White, 7:30.
FOURTH AVENUE, Corner 22d St.—The Rev. Dr. Walter Duncan Buchanan; 11 and 8.
FOURTH, West 128th St. and 21st St.—The Rev. Dr. Pleasant Hunter; 11 and 8.
HARLEM, 125th St., Near Madison Av.—The Rev. Daniel Russell; 11 and 8.
MADISON AVENUE, Corner 73d St.—The Rev. Dr. Howard Agnew Johnston; 11 and 8.
MADISON SQUARE, Corner 24th St.—The Rev. Dr. G. H. Parkhurst; 11; the Rev. W. W. Cook, 8.
OLD FIRST, 5th Av., Corner 12th St.—The Rev. Allen W. McCurdy; 11 and 4:30.
PURITAN, 5th Av. and 130th St.—The Rev. Dr. C. J. Young; 11 and 8.
REFORMED, 2d Av. and 3d St.—The Rev. Dr. Robert Mackenzie; 11 and 8.
SPRING STREET, Near Varick St.—The Rev. R. H. Bates; 10:45 and 7:45.
THIRTEENTH STREET, West of 6th Av.—The Rev. Dr. James H. Shodgrass; 10:45 and 7:45.
UNIVERSITY PLACE, Corner 16th St.—The Rev. Dr. George Alexander; 11 and 8.
WEST, 42d St., West of 8th Av.—The Rev. Dr. Anthony H. Evans; 11 and 8.
WEST SIDE, Amsterdam Av. and 105th St.—The Rev. Dr. John Balcom Shaw, 11 and 8; the Rev. William Bishop Gates, 4:30.
WESTMINSTER, 23d St., Near 7th Av.—The Rev. Dr. John Lloyd Lee; 11 and 7:45.

PROTESTANT EPISCOPAL.

ALL SOULS', Madison Av. and 66th St.—The Rev. Dr. S. D. McConnell; 11 and 4:30.
ASCENSION, 5th Av., Corner 10th St.—The Rev. Percy S. Grant; 11 and 8; the Rev. Walter E. Clifton Smith, 4.
CHRIST, Broadway and 71st St.—The Rev. George Alexander Strong; 8, 11, and 8.
EPIPHANY, Lexington Av. and 50th St.—11 and 8. The Right Rev. Henry C. Potter and the Rev. Walter E. Clifton Smith, 11.

NEW JERUSALEM, 20th St., East of Park Av.—The Rev. Julian K. Smyth, 11; the Rev. William L. Worcester of Philadelphia, 8.
Y. M. C. A., 39 East 23d St.—Dr. Harlan P. Beach; 3:45.

Racquet Clubhouse Addition.

The addition to the Racquet Club's house, to be erected at 26 and 28 West Forty-fourth Street, at the rear of the present building, will be four stories in height, according to the plans filed yesterday at the Building Department by Architect C. L. W. Eidlitz. On the first floor will be a cardroom. The second floor will contain shower baths, bathrooms, and dressing rooms. On the third floor there will be five squash courts, and on the fourth tennis courts. The front of the building will be of limestone and terra cotta. The estimated cost of construction is $28,500.

BATHING AT PALM BEACH

Neptune's Gay Worshippers at the Florida Resort.

Sunshine of the Far South Drives Pleasure Seekers to the Beach and the Groves—John D. Crimmins's Fishing Trips—The Personality of "Peter."

Special to The New York Times.

PALM BEACH, Fla., Jan. 31.—The heat here for the last three or four days has literally driven everybody into the sea. The temperature of the water yesterday was 78, and that of the air about two degrees higher. During the bathing hour the tennis courts are deserted. Golfers who have reached in their pilgrimage the hole called "the ocean" leave their clubs with caddies for a while and take a dip. The tree-canopied avenue that leads from the hotels down through the links to the beach, always a charming walk, becomes just before the time for swimming the scene of a gay procession parading to the sea. On one side are those who stroll; across the way are those who ride luxuriously in wheel chairs propelled by colored youths on bicycle seats behind; in the middle of the way are those whose chariot is the mule car drawn by Peter, one of the best known of Palm Beach characters.

Peter has a distinct individuality, and he knows his friends. But there is no doubt that he has been sadly spoiled. There has been a consumption of sugar at the hotels lately out of proportion to the number of guests. Peter has been the consumer. He waits for passengers in front of the hotel entrances, and when he sees one of his many sugar friends come down the steps he picks up his ears and continues to wait. He is patient. He won't move until he gets a lump to roll under his tongue as he jogs along.

And yet he is capable of disinterested friendship. His one intimate, his Pythias, is the small Scotch terrier belonging to Mr. C. B. Cory of Boston. For many trips every day the small dog trots along faithfully by the hoofs of the big mule, the latter lending an attentive ear to the discourse of his friend, who with more leisure and opportunities to circulate about naturally knows much more of the current gossip.

They converse together, compare notes, and the beauty of it is that when the comment becomes a little caustic there is no danger of chance remarks, made without malice, being overheard and garbled by the scandal mongers.

John D. Crimmins of New York, his daughter, Miss Constance Crimmins, and his niece, Miss Genevieve O'Brien, are at the Breakers. Though Mr. Crimmins fishes almost every day, and almost all day, he has found time to give the first luncheon of the season at the houseboat reached by a six-mile sail on Lake Worth, which trip, with the tropical shores and pretty cottages on either side, is a feast for the eyes and a wonderful appetizer for the good old-fashioned Southern feast of fried chicken, corn bread, and the rest that is served in the cosy and delightful houseboat dining room. Besides Miss Crimmins and Miss O'Brien, Mr. and Mrs. Wilbur C. Fisk of New York were the guests. Friends who greeted the Crimmins party on their arrival were Thomas F. Gilroy, ex-Mayor of New York City, and his daughters, Miss Virginia Gilroy and Miss Claire Gilroy.

Every day the New York colony here is receiving numerous additions. Among those who have arrived this week are Mr. and Mrs. Lewis Quentins Jones. They are at the Hotel Royal Poinciana for a protracted stay.

Mr. and Mrs. John Moller have arrived at The Breakers for the season. Mr. Moller is one of the best of the golfers who play on the Palm Beach links. Also at The Breakers are Mr. and Mrs. J. Howard Sweetser and Miss Sweetser.

Gen. Louis Fitzgerald, who has been at the Hotel Royal Poinciana for two weeks, has been joined by Mrs. Fitzgerald, Miss Fitzgerald, Miss Strong, and Louis Fitzgerald, Jr. They are awaiting the arrival of their houseboat, the Bonnie, which has found a temporary resting place on the waters of the Indian River, about a hundred miles north of Palm Beach.

Mr. and Mrs. Henry M. Flagler have returned from Nassau and have had a number of guests at Whitehall, among them Mrs. Flagler's uncle, Col. Thomas Kenan and Mr. Haigh. Mr. and Mrs. Kenan are at the R. Ingraham and Miss Ingraham of St. Augustine. On Wednesday afternoon Mrs. Flagler gave a whist party.

Mr. and Mrs. Eugene M. O'Neill of Pittsburg, whose daughter, Miss Emily O'Neill, married Frederick Townsend Davies of New York, have arrived for the season at their cottage on the beach. Among the numerous guests of the O'Neills this season will be Miss Martha Johnson of Macon, Ga., a cousin of Mrs. Cornelius Vanderbilt.

A report is current here to the effect that the Duke and Duchess of Manchester will visit Palm Beach in February.

Mrs. Frederick Robert of Pelham Manor gave her first "at home" of the season on Tuesday at Fleur d'Eau. Among the ladies present were Mrs. Robert Dun Douglas of New York, Mrs. Henry M. Flagler, Mrs. Eugene M. O'Neill, and Mrs. H. H. Benedict and Miss Benedict of New Haven.

Lieut. J. W. Greene of the United States Navy and Mrs. Greene are including Palm Beach in their wedding journey. They have been at The Breakers for some days. Mr. and Mrs. R. Gratz-Fell of Chestnut Hill, Philadelphia, who are at The Breakers, are entering with spirit into the life of the younger set here.

Next to New York, Pittsburg has as yet the strongest representation at Palm Beach. Prominent residents of Pittsburg who have already transferred the scene of their social activities to Palm Beach are Mr. and Mrs. Thomas McKee Cook, Mr. and Mrs. James W. Scully, Mr. and Mrs. Henry Darlington and Miss Darlington, Mr. and Mrs. Henry W. Oliver, and Mr. and Mrs. Henry R. Rea.

William M. Harriman, who has been in Florida since the beginning of the season, has gone to Miami for a brief visit.

POSEUR POSED TOO MUCH.

Called Up Police Headquarters to Impress Two Young Women and Was Arrested and Fined.

Robert G. Marten, who has just reached his majority and is in the real estate business, played the rôle of poseur at the Manhattan Casino at Eighth Avenue and One Hundred and Fifty-fifth Street, early yesterday morning with humiliating results. He was with two young women and to impress them with his importance as a factor in the municipal administration he pretended to be Police Commissioner Greene's Secretary. Some drinks which he had imbibed intensified his audacity, and led him at about 2:30 o'clock to call up Police Headquarters. In a tone that to the listening women indicated merely routine duty, he said:

"This is Greene's Secretary; who's in charge?"

He was informed that Sergeant Sullivan was in charge of the Information Bureau. Sergeant Sullivan being switched on, Marten appraised him also that he was "Greene's Secretary," and asked:

"Is there anything doing?"

"No, Sir," came the answer, deferentially enough.

"All right," said Marten. "I'm going to inspect the Tenderloin now, and I'll call you up again in half an hour."

It is not the duty of the Commissioner's Secretary to go investigating in the Tenderloin, and his remark aroused suspicions, so that when the supposed Secretary called again a trap was ready for him, and he had hardly given Headquarters the assurance that everything seemed to be all right in the Tenderloin when a special policeman had him by the collar.

The rest was routine merely, except perhaps the amount of the fine which Magistrate Crane in the Harlem Police Court fixed at $2. His excuse was that he had been drinking.

Theta Delta Chi Convention.

One hundred or more college boys and graduates from New York City and the immediate vicinity are planning to attend the fifty-fourth annual convention of the Theta Delta Chi fraternity, to be held in Boston on Feb. 22, 23, and 24 next. The New York delegation will include members from the chapters of Theta Delta Chi in Columbia University and the College of the City of New York.

NEED FOR PILOT ENGINEER

Railroaders' Views of the Lesson of the Graceland Disaster.

Old Trainmen Tell of Chances Taken by Those Grown Careless Through Familiarity with Danger.

The agitation for "three men to an engine," revived and strengthened by the disaster near Westfield, on the Central Railroad of New Jersey tracks, finds indorsement among railroad employes. They cannot be outspoken publicly on a question which, though it affects them directly, is considered by General Managers and Division Superintendents to be none of their business, but among themselves they point out that almost every disastrous collision in recent years in all human probability would have been averted had the engineer had an assistant lookout.

Enginemen, brakemen, and conductors, homeward bound after their runs, tell tales in the smoker of incidents of railroading that, had they been witnessed by passengers, would have induced nervous prostration. That familiarity with ever-present peril which breeds contempt in the most cautious of engineers is instanced by these men as the chief argument in favor of the plan of having an assistant engineer, though the danger of the man in control of the rushing machine falling dead or going insane is given due weight. These latter contingencies, they say, are exceptional—the carelessness resulting from long association with danger is ever present.

A story illustrative of another source of peril, fortunately rare, was told the day after the recent wreck. It dealt with one of the most popular engineers on a road leading from New York. He was to take out a special, on which were several members of the Board of Directors. The man was obviously "under the weather," and fell as he descended from his cab to make a last inspection of the slides and rods. For an instant he lay as if paralyzed, with his legs between the drivers, but only for an instant. The fireman, who had been peering apprehensively up at him from the after deck, was at his side with a single bound, and struck him a violent blow across the face with his greasy cap.

"Make out we're skylarking," he said, "or our folks 'll notice you and you'll lose your job."

Quickly he raised his mate to his feet. Then he boosted him, laughing and striking back, up to the footboard. Then he jammed him on his seat as the lever, struck him one final blow, and agile as a cat climbed back to his own place with a broad grin on his face. None of the witnesses who understood the incident interfered, and two minutes later when the air whistle sounded, the special rolled away on her course to the mountains and the forests as though controlled by the clearest brain and steadiest hand on the whole long line.

The engineer is dead. He did not die that day, nor did any of those who rode behind or before him suffer as a result of his condition. But it was a long chance.

They told one story on one train of an engineer on another line who was running at a fifty-second clip through a ten-mile stretch of forest with more than a dozen crowded cars when his pipe went out. His racing locomotive, so the tale ran, was one of the newest type, built to meet the requirements of modern traffic. Her firebox was the full width of the widest sleeping car, so that the greatest volume and pressure of steam could be developed. This left no room for the crew to stand beside it. So the driver stands all alone in his cab just back of the roaring stack, where his view of the track is of the best, and his stokers—for there often must be more than one—protected by a massive steel wind shield, leap from tender to furnace on a narrow firing deck set low down at the rear of the whole machine.

This engineer struck several matches, but he couldn't hold the fire. Then, so the story went, he climbed out of his cab, back along the narrow running board, through the wind shield to the firing deck, lit his pipe, spoke to his subordinate, and then slowly wended his way back to where he belonged. A casual observer with frightened face glued to the pane of the forward car, did not compute the time all this took, for he was glad to know that he was alive. This story created not even surprise in the little group that heard it.

"Well, he couldn't have stopped it he'd had to on that grade," was one comment. "He'd 'a' been killed quicker than anybody else," remarked a second listener.

Another story dealing with an incident fraught with even great possibilities was of a dark and dangerous stretch of rails close to a great terminus. It was guarded by every mechanical safeguard that ingenuity could devise, for its evident perils have had costly demonstration. Engineers there it was whispered, through long immunity come to regard this as about the safest part of the whole long line because of the appliance, and at times, when they have a dinner engagement or other personal reason for hurrying away from their labor, they have been known to leave the train in charge of their fireman and wash up at the tender tank. They had a bad wreck there once and it cost much money and many human lives.

A grizzled engineer who has spent the greater part of his life at the lever put the proposition this way:

"By law it is required that every ferryboat shall carry two men in her pilot house. The law is obeyed, too, except in emergencies. River pilots come cheaper than locomotive engineers, but is it not strange that the great transportation companies do not find it to their own best interests, in the light of so much past experience, to urge the passage of a measure providing that on all fast passenger trains there shall be a pilot engineer? What comparison can be drawn between the horrible possibilities of a wild steamboat and a runaway engine? The pilot of engineer would have nothing to do with the operation of the locomotive's mechanism. His function would be to watch the track, to report signals, and to watch the other engineer."

ACTIVITY AT ATLANTIC CITY.

Trolley Cars to Supplant 'Busses—Big Hotels Under Construction—Plans of Amusement Managers.

Special to The New York Times.

ATLANTIC CITY, Jan. 31.—The Lenten season at the seashore has been anticipated this year in the instance of Atlantic City, at least, by several weeks. The crowds of the past week have exceeded those of any similar period in the history of the resort. Last Sunday all of the big board walk hotels held almost their midsummer quota of guests, and the bookings for to-morrow are as heavy. New Yorkers predominate among these visitors, as they usually do in Winter and early Spring. The Southern patronage has increased to such an extent this Winter that the Pennsylvania Railroad has put on a special train from Washington to Atlantic City, and it is running to its capacity.

The reign of the 'bus driver in Atlantic City is about over, for the City Council has granted to the Pennsylvania Railroad a franchise to gridiron the city with trolley lines. The franchises include four routes, and will cover the territory thoroughly to all points of the island. Material for the equipment and hundreds of men have already been rushed into the city, and part of the system will be in operation by the coming of another season.

At least three, and possibly four, great modern, fire-proof hotels will soon join the ocean-front colony of hostleries, while the number of smaller hotels back from the Boardwalk is legion. New York capital is back of probably the biggest hotel enterprise ever projected in this city of big hotels. A syndicate, the members of which have not been disclosed, has purchased a block of land in the Chelsea district, the most fashionable residence portion of the town, on which it is intended to erect an immense hotel and sanatorium. The plans of the enterprise have not been given out, and the project has only been announced in a general way.

But the building boom is not confined to activity in the hotel construction line. The amusement purveyors are pushing the hotel men for the lead. One syndicate has let a contract for a thoroughly up-to-date theatre on the site of the burned Academy of Music, at the foot of New York Avenue, which will be under the control of a metropolitan manager. An even more pretentious playhouse will be constructed at the corner of Pacific and Tennessee Avenues, which will be controlled, it is said, by the Frohmans and Nixon & Zimmerman. The Atlantic Amusement and Construction Company has been organized, with a capital of $100,000. The money back of this enterprise is said to come from New York, and will be invested in a big illusion on the lines of the famous "Trip to the Moon" at Buffalo. Mr. Tilyou of Coney Island is considering plans for the improvement of the old Auditorium Pier, of which he is the lessee, on an elaborate scale. It will be modeled in a general way after his Steeplechase Park, and in addition to that there will be a large theatre auditorium near the Boardwalk end of the pier.

There is great activity in yachting circles, and the plans of the Atlantic City Yacht Club and the Yachtsmen's Association for the coming season are on a more ambitious scale than ever dreamed of before. The usual regattas and races will be augmented by a number of big events in which Commodore English of the Philadelphia Yacht Club has promised the co-operation of the Quaker City organization.

The New Yorkers registered at the leading hotels during the past few days include:

W. Kelly and son, J. A. Turner, F. Osborne, C. F. Bedell and wife, and George S. Marston, at Haddon Hall.

C. F. Hoskins, W. D. Thorne, Mrs. C. H. Holt, R. R. Collins, and H. J. Pearson, H. Manville, W. A. Lautht, E. D. Edwin, at the Dunlop.

J. O. Dreisbach, G. H. Hayes, Jr., at Kuehnle's.

C. Simon, Miss F. Simon, Mrs. R. K. Sichel, and E. H. Sichel, at the Isleworth.

A. Forsheim, W. May, A. Clark, Mr. and Mrs. L. Bluhm, Mr and Mrs. L. Wolfheim, L. Feisenher, Mr. and Mrs. F. Kurtzman, E. J. Steiner, and E. Schweinburg, at the Rudolf.

G. H. Kennedy and wife, M. Hassel, A. Hayes, R. R. Orchell, and J. R. Reaubon, at the Strand.

A. F. Denniston, Mr and Mrs. M. E. Stroock, Mr. and Mrs. J. H. Morton, Mr. and Mrs. Pettit, Mr. and Mrs. T. H. Griffin, I. M. Kramer, Mr. and Mrs. E. M. Grant, D. Richter, V. A. Picard, M. Kahn, Joseph Schloss and Miss Rose Schloss at the Traymore.

Mrs. F. I. Maguire, and George Kelly, at the Wiltshire.

Rabbi M. T. Decker, Bishop Farrar, M. S. Tarbell, Mrs. E. O. Necker, Miss Ruth A. Roe, and the Misses Robinson of Boston, at the Hotel Morton.

SILK HAT CLUB ON 'CHANGE.

The Application of Mr. Miller for Membership Was Granted at Once.

The Silk Hat Brigade of the New York Stock Exchange enlivened the dullness of the morning yesterday by the initiation of a new member, G. Clinton Miller. Mr. Miller made his first appearance on the Exchange in a high hat. Wearing a high hat on the Exchange floor is a privilege of the members of the Silk Hat Club, and membership can only be secured by proper initiation. The wearing of a high hat by a non-member is considered as an application for "qualification."

The application of Mr. Miller yesterday was granted at once. A committee consisting of W. B. Coster, J. Lorimer Worden, A. B. Graves, J. H. Dunne, and J. H. McCullough at once retired, and after a while reappeared with silk hats and canes. They surrounded Mr. Miller, singing "Have you any more at home like this one?" Then they tossed their hats and his high in the air, and in a few moments only ragged remnants of the hats remained. One of these was used to take up a collection for the new member.

A few moments later an official report was sent out over the ticker to the effect that Mr. Miller had been so overcome by his feelings that he had not been able to rise from his chair for ten minutes.

ESTATE OF AUGUSTIN DALY.

Its Appraisal Shows the Assets About $26,000 Less Than the Liabilities.

The appraisal of the estate of Augustin Daly, which was filed yesterday, shows that, after the payment of his debts and liabilities, there is a deficiency of $26,000.

The assets included the lease and good will, scenories and properties of Daly's Theatre in this city, which are valued at $50,000; other scenery and costumes, $25,000; library, pictures, furniture, &c., $150,000; Daly's Theatre, London, and contracts with George Edwardes of the Gaiety Theatre, London, $70,526. The gross personal estate is valued at $[illegible].

From this sum is deducted the sum of $201,146. Of this amount Mr. Daly's debts in the United States aggregate $[illegible], and his debts in England $[illegible]. The commissions on the sale of Mr. Daly's books, &c., amount to $22,968, the total liabilities leaving a deficiency of the amount above mentioned. Ex-Justice Joseph F. Daly is one of the executors.

New Y. M. C. A. Building in Brooklyn.

The Bedford Branch of the Young Men's Christian Association in Brooklyn has purchased a site at the northeast corner of Bedford Avenue and Monroe Street, on which it plans to erect a building to cost $250,000. The new home of the branch will be one of the finest structures of its kind in the city. It will occupy a plot having a frontage of 75 feet on Bedford Avenue and a depth of 125 feet on Monroe Street.

Child-Labor Investigators Collect Facts For Crusade.

Representatives of the Committee Conducting Campaign to Secure Prohibition of All Work by Children Show Need For New Legislation.

MEMBERS of the committee engaged in the campaign to secure the prohibition of all child labor in this State have been in conference with the State Department at Albany, and announce that the bills to that end will have the backing of the department. The committee is also inclined to be jubilant over additional moral support which has been made manifest in resolutions indorsing the work of the committee, three separate organizations having recently put themselves on record in that direction. At their annual meetings the council of the United Hebrew Charities, the Consumers' League, and the women of the Ethical Culture Society passed resolutions expressing sympathy with and approval of the work. During the first ten days of the year the Governors of New Jersey, Pennsylvania, Illinois, and New York each urged the Legislatures of their respective States to pass new laws for the prohibition of child labor.

Investigation by the representative of the committee has brought to light a large number of new facts with reference to the evil in this State, and a mass of information has been accumulated, much of which deals with individual cases. It is asserted that an insatiable demand for children comes from the bakeries and laundries which deliver their goods in baskets. It is said that the employment of children in this way is only limited by their ability to lift or carry the loads from house to house. It is rare for children over twelve or thirteen years of age to be employed in such work, and in the poorer quarters of the city both boys and girls are employed.

A large number of children, it is said, are entirely beyond the pale of the present law, which applies only to "factories" and "mercantile establishments." The most important among these are the newsboys, bootblacks, peddlers, office boys, messenger and telegraph boys, and those who deliver for the express companies. There are children who deliver milk from 4 o'clock in the morning until the opening of school. There are other children, both boys and girls, who work both before and after school, cleaning the hallways and basements of the poorer flats and hotels and washing dishes in the kitchens of the restaurants.

During the committee's investigation of street children it was found that a large proportion were at work without any family necessity for their earnings. The children in some cases were making pennies for the purpose of freeing themselves from parental authority. In other cases the parents were requiring financial assistance from children irrespective of the welfare of the latter. In those rarer cases where sheer poverty drives the children to work the families are fit subjects for charity; they require assistance which the average street boy cannot effectually meet.

The most striking and self-evident facts about the newsboys are the early years at which they go to work and their long hours and night employment. Out of 100 newsboys to whom an investigator talked 36 were twelve years old or under, 37 were ten years, and 8 were from six to eight years of age. The newsboys who go to school sell their papers from 3:30 in the afternoon until as late as midnight, while some of them sell evening papers as late as 2 o'clock.

TYPICAL CASES.

One nine-year-old boy, Harry Mart, sells the sporting and theatrical papers on Friday and Saturday from 11 P. M. to 2 or 3 in the morning. Another ten-year-old boy, Hyman Sherman, sells from 8:30 to 11 P. M. He explained apologetically that he had been selling only a year, and not being used to staying up late could not keep awake; that he often dropped down somewhere to sleep until his brothers, eight and twelve years old, were ready to go home. After 11 o'clock the three boys walk to their home, a mile away. They have to be in school again the next morning. His case is typical of a large number recorded.

The following cases are cited by a teacher whose class is filled with newsboys and bootblacks. Only a few facts are reproduced out of the complete records of each case reported by her for the committee:

Rocco is ten years old. He is not compelled to sell papers every day—he may or may not as he chooses. He is a gambler and a smoker and very difficult to assign to any category. His earnings are about 20 cents a day. He is allowed to stay out late at night when there are extras to be sold. In school he is intelligent but irritable and incapable of sustained attention. His father and brother together are earning $12.50 a week.

Vandina is thirteen years of age. He is known as a loafer among the boys. He haunts the ferries on West Street for odd jobs—carrying bags, calling cabs, &c. He generally sells a few papers by "dishing" the other boys—that is, he watches for a chance when the boy is busy with one customer, and runs in and secures the next before the lad can attend to him. Vandina makes from 15 to 40 cents a day and takes home 6 or 7. He is a smoker and a gambler. In school he is unruly and unintelligent.

Giuseppe is ten years old. He is sent for papers daily, but has no regular stand. Though he may not return home with the profits proportionate to the "stakes" his mother furnishes him, he keeps all his "odds," that is, the money made over and beyond the expected profits. His average earnings are about 20 cents. He is furnished with supper and breakfast at home, but buys his dinner for 5 cents or less. In school he lacks almost wholly concentration and attention, and he is consequently very unruly and uninterested in school work. He is an incorrigible truant. The money he makes beyond his normal profit he uses for gambling and cigarettes. He is nervous and irritable. On hard-luck nights he sleeps where he can. Twice he has been caught stealing lead pipe when he has not been able to make enough to take home. His father is able-bodied and makes from $8 to $10 a week.

Nicholas is ten years old. He sells papers regularly at the entrance of the Brooklyn Bridge, making about 25 cents a day. His principal work is during the crush hours from 4:30 to 7:30 in the afternoon. The effect of this strain on the boy is very noticeable. He is nervous and irritable and very aggressive. He is obliged to bring home daily a certain amount, but may keep what he makes over and beyond it. He is an inveterate gambler and smoker, and has been caught stealing brass and lead piping several times. His father earns $11 and his sister $2.75 a week.

THE EFFECT ON MORALS.

Mr. Poole of the University Settlement has been investigating the effects of street labor on the character of the children. He has made for the committee the following statement: "Corruption of morals spreads among the street boys like a new song phrase. The 'morals' of all are outstripped by those of the boys who have eluded almost every influence of home and school, of boys' clubs, night school, and gymnasiums, whose only activity has been that of the street as they pass it.

"The street sharpens the boy's wits and makes a man of him. The process, though irregular, is amazingly swift. Minds already old are 'put wise' by minds still older. The House of Refuge holds 800 boys of sixteen and under. Most of them have always lived in the streets and are classed as 'workers,' 'loafers,' or 'thieves,' though many of them belong by turn to all three classes. As the Superintendent told me, all the work of the House of Refuge is planned to undo the bad teaching of the street, its false morality, its failure to train for any permanent trade, its irregular periods for work and meals and sleep, its tense nervous life, sustained and poisoned by double a man's portion of coffee, cigars, and cigarettes. I know a large number who average four bowls of coffee each meal.

"In the streets near Newspaper Row I found over one hundred sleeping. Other hundreds sleep in stables, condemned buildings, back rooms of low saloons, and halls of tenements. This sleep they piece out at intervals during the day. Their meals are mostly at lunch counters and in certain cheap restaurants where dice can be used on the sly. Some there are who rise to higher places, but those who succeed are the first to leave the street. Their influence is lost upon it. Not so with the failures. The toughs, beggars, and criminals remain to teach those who follow. 'Hundreds of these boys must grow bad,' said one who had lived for many years among them.

DRAG OTHERS DOWN.

"Three examples will serve as types of those who drag the others down.

"Ever since he can remember Paddy has sold papers. By twelve he had become an expert at shooting craps. He began now 'raising the limit' and 'loading the dice.' He learned that no man is guilty until caught, and made this his moral standing. At thirteen he was known in the Tenderloin, and, being a sharp boy, he soon learned the trick of 'stalling'—a common trick and simple enough when once you have learned it. One little man rushes his papers up in front of a passer-by, while two more rush in from behind, and the thing is done in an instant. Later in the night he used to lie around waiting for drunken men and women. His name became known in police courts. He made his money—and spent it—like a man. He contracted venereal disease before he was fifteen. In one boys' lodging house I learned that the majority of the inmates have had a disease of this nature.

"Of the messenger boys, a large number do all-night work between all-night houses and all-night people. Some every week, some alternate weeks, some in four-hour shifts, some twelve hours at a stretch. In one office of nineteen, the oldest was sixteen years old. The youngest looked barely twelve. They went on at 8 o'clock at night, and I found them still there at 8 o'clock the next morning.

"Here is a case of a special messenger. He is fifteen years old. I had just a glimpse of him through the sweet, sickening smoke of a tiny opium stall in a dive in Chinatown. He was cooking an opium pill for a white woman who is a slave to Chinamen and the opium habit. It was his business to run errands for a dozen women of her type. He had taken the habit himself. In Chinatown alone there are twenty boys like him.

"On Wall Street there are hundreds of stock runners below fourteen years of age. Harry began at twelve. He must have been a bright, attractive little chap, for every one liked him. When the markets were wildest he was always swift and sure. He saw dazzling fortunes made in a day, and slowly the spirit of the place got into his blood. His spare time he began spending against the law in certain all-night billiard rooms, centres for the younger crooks of the Bowery. He became a famous winner with the dice. At fourteen he began spending two nights of every week in a hideous place which is rightly called "a sink" for all the city's prostitution. In one year he contracted the most loathsome of all its diseases. By sixteen his face was as terrible as the face of a leper. A few months later he died."

The Principal of a public school undertook for the committee an investigation of the work done by the children of his school. In this investigation the delivery boys were found to outnumber by far those in other occupations, making a total of fifty-eight compared with thirty-seven employed in small stores, and a much smaller number in all other employments.

One of the difficulties which the committee has encountered is the fact that parents and employers evade the requirements of the age limit by means of a subterfuge which does not perjure either party. The present law forbids work only for those children who are "employed." This permits children to work wherever wages are not directly paid to them. In factories, where other members of the family are at work, the latter are paid for the children's services, and it is urged that the children are working for them.

SYSTEM AT BIG FIRES.

How Districts from Which Assistance Is Sought Remain Protected.

WHEN Chief Purroy sent in the third and fourth alarms from the recent fire in Cooper Square few of the hundreds of persons who were watching the fight against the unusual blaze had any realization of the wonderful mechanism within the department which he set in motion. They saw only the dozens of fire companies, steamers, hook and ladder trucks, water towers, chemical carts, and hose wagons as they dashed noisily to the scene from every direction, but that was only a small part of the activity caused by the signals that had been given.

There is a remarkable system in the department, in which scores of companies occupying stations in all parts of the city work together almost automatically. Thirty-seven companies were called to the fire in Cooper Square, and this would have left almost the entire lower east side without firemen to answer alarms of other fires which might have, and, in fact, did come, had it not been for the perfect arrangement.

It will be seen how difficult the Cooper Square fire was to fight, and also how many station companies were taken from their houses, from the following summary, taken from the Chief's record:

On the first alarm Engine Companies 33, 25, and 72; Hook and Ladder Trucks 3 and 9; Water Tower No. 2, the Deputy Chief of the First Division and Chiefs of Battalions 4 and 3 responded; on the second, Engines 5, 20, 55, and 18, Hook and Ladder 20, and Chief of the Fourth Battalion; on the third, Engines 26, 14, 13, 17, and 11, Hook and Ladder 11, and the Chief of the Second Battalion, and on the fourth alarm Engines 24, 31, 30, 9, 12, and 7, Hook and Ladder 5, and the Chief of the Fifth Battalion.

Then, automatically, as it were, without further orders or signaling, fire companies in various parts of town moved to station houses made vacant by the going of the regular companies to the fire. For instance, on the third alarm, Engine Company No. 16 proceeded to the house of Engine Company No. 17, No. 28 to the house of No. 14, No. 27 to the house of No. 55, and Hook and Ladder Company No. 7 to the house of Hook and Ladder No. 3. On the fourth alarm other companies moved similarly.

These substitutions do not always prove to have been necessary, but on the occasion referred to they did. The Cooper Square fire had to be fought until late Monday night, and in that time there were some twenty-seven fires, three of them so serious as to necessitate the turning in of three or four, and for one of them five alarms, all within a mile of Cooper Square.

The same system of substitution of companies works throughout the city, so that no section is left unprotected at any time.

NEW RAILWAY LINE FOR AUSTRALIA

American Capitalists Invited to Bid for Work of Construction.

AMERICAN contractors are to have a chance in the competition for the construction of an Australian railway 1,063 miles long, extending on a gauge of 3 feet 6 inches from Oodnadatta, South Australia, to Pine Creek, in the Northern Territory. The bill giving the Governor in Council power to let the contract was passed by the South Australian Parliament on Nov. 13 last, and the new road will be a link connecting the Adelaide-Port Darwin Transcontinental. Eligible to compete for the contract are firms in America, Australia, Great Britain, France, and Germany, and the bids must be in the hands of the Commissioner of Railways at Adelaide before May 13, 1904.

Each bidder must state the quantity of land he requires for each mile of trackage, the number of miles he will agree to build in a given time, and such other specifications as may be required. Each must deposit with his bid the sum of $50,000 as a guarantee, and if the bid is accepted the amount must be increased to $250,000. Work will have to be carried on simultaneously from each terminal, and the rails must be of the sixty-pounds-a-yard variety.

A peculiar feature of the contract will be that it will force the builder, after he has got his work under way, to run at least one train a week for passengers and freight over such tracks as he shall have completed from each terminal. Members of the South Australian Parliament are to be transported free, also Government officials. When the road is opened the guarantee of $250,000 is to be refunded to the contractor, having borne interest during the interval. The lands granted to him shall be exempt from taxation for ten years.

Clause 47 of the act enables the Government to purchase the railroad from the builder at any time after its completion. The price is to be fixed by arbitration. In other clauses power is given to the contractor to purchase the 145 miles of 3 foot 6 inch gauge railway already constructed by the Government between Palmerston (Port Darwin) and Pine Creek. Failing purchase, the contractor becomes entitled to running powers over the 145 miles. If he purchases it, the short line becomes a part of the one he has built and is subject to the regulations of the contract.

Specifications have been forwarded by the foreign Consuls in Australia to their respective Governments. Information in addition to this may be had from the Agent General for South Australia in London.

In advertising their plan for a transcontinental line the Australian Government calls attention to the fact that regular service for passengers and freight will be inaugurated over the Chinese-Eastern Railway this month, enabling European travelers to be booked through from the larger European cities straight to various Chinese and Japanese centres. At least three times a week trains will leave the principal stations in European Russia for the East Asian terminus, and there is to be a system of return tickets good for two years, with maximum baggage privileges for each passenger.

Long before the trans-Australian line is completed it will be possible for London mails to reach Port Darwin in fourteen days, and several Oriental railroad ventures are expected shortly to reduce again the schedules between Europe and the Far East. These new ventures have Canton, China, as their goal for quick traffic, and a steamship of fast speed can go from Canton to Port Darwin in 96 hours. The Australians are looking forward to the day when the Chinese city will be the Asian port of embarkation and debarkation of the European-Australian traffic. Thus the new trans-continental railway becomes not only a State or National problem of interest, but one of international and world-wide importance.

The North Australian League has arranged to establish a bureau to which foreign contractors may apply for information as to the contract. A sub-committee has been formed, and among those to whom inquiries may be addressed are the following: G. R. McMinn, C. E., of Melbourne; V. L. Solomon of Port Darwin, and J. J. Rendle, Secretary of the League, Melbourne.

The committee has issued printed statements about the contract, and in one of them is a description of the sleeping cars to be put into service on the Great Siberian Railway between Moscow and Port Arthur—5,500 miles. Passengers are to be as comfortable as on any European railroad, it is said, and the fare will be just $60. Great speed will be maintained on those sections of the road that allow it. Including the journey from London to Moscow and the ocean passage from Port Arthur to Port Darwin, Australia, the total fare from the British capital to the Australian port will not be more than $165.

Reasons for Short Weight.

PEOPLE who are railing against underweight in coal are very often right, it is to be feared, in laying the blame at the gate of the coal yard, but here and there may be found an honest dealer sadly misjudged. For instance, a cart of coal (and quite full enough to bespeak good measure) came slowly out of the yards the other day and lumbered along down Morningside. The driver, following the advice of many wise men, was "looking straight ahead." Behind him a party of small boys, perhaps six or seven, were doing diabolical things. One boy somewhat taller than the others held a long pole, and this he would swing gently back and forth over the coal, causing little showers of the shiny black "gold" to descend to the street. Immediately the other lads would make frantic dashes for the lumps as they fell, would stuff them into their pockets, their caps, and one enterprising youth even slipped a few small pieces down the back of his neck. All along the route the boy with the pole plied his trade and ever and anon new recruits would spring up, gather up the falling lumps, and give place to a new set. If the man to whom that coal was being carted only knew the number of poor families he had unconsciously helped, how happy indeed should he be. But, alas! so perverse is man, he probably rang up the coal yards the next day and said evil things about weights.

MANY KINDS OF FUEL BRIQUETTES

Not Only Coal Dust, But Other Material Utilized.

COAL BRIQUETTES, composed of soft and hard coal dust, with a strong binder of pitch or similar substance, have been extensively used in Europe for many years, and in the past few years several factories have been established in this country to utilize in this way the enormous waste of fine coal dust near the mines. The present coal famine has stimulated these factories to greater endeavors than ever before and new ones have been projected for operation in the new field of industry. But probably more important in some ways than these coal briquetting plants are the many efforts being made to compress waste matter into fuel briquettes. Peat, like coal, furnishes natural material in considerable abundance for this work, and in New England a number of plants are being established to supply the markets with fuel in this form.

In the iron districts of Pennsylvania and Ohio the flue dust of the blast furnaces is also being collected and compressed in briquettes for feeding the furnaces. This flue dust collects in immense quantities in the chimneys of the blast furnaces, and brushing arrangements have to be built to clean it out constantly. By a new process this dust is collected in a series of buckets running on an endless chain and carried to big mixers, where it is rolled around and around in a cement or pitch binder. Then it is pressed into briquette form, dried in big ovens or furnaces, and carried back to the furnace of the mill. Here it is fed to the fires again with ordinary coal, and its saving represents an important item of economy.

The briquetting of general waste, however, is even more interesting. There are very few articles of waste which do not contain a fair amount of combustible material. The sweepings of the city streets hold a large amount of vegetable and woody fibre, animal hair and flesh, and coal dust and screenings. All of these will burn and produce heat, but in their isolated form not in sufficient quantity to be of much use. In many English towns the city's waste is used for burning to generate steam or electric power, which in some instances operates the city's pumping works and electric lighting plants. But the schemes under consideration now by a considerable number of inventors and practical business men are to utilize this waste material direct. By mixing this waste in proper proportions with a pitch binder and then compressing it into small, convenient sized briquettes a fairly good fuel is obtained. This fuel, like all briquettes, is free from dust and ashes, and it can be handled easily without making everything dirty with which it comes in contact. The pitch furnishes just sufficient binding power to hold the fine particles together while burning, and this is sufficient to produce an intense heat.

The question of utilizing the city's waste material for briquetting is dependent largely upon the cost of the work and the binder. Pitch is the most expensive part of the briquettes, even when coal dust is used as the raw material, but experiments have lately enabled manufacturers to produce an excellent binder at very little cost. In most of the American coal briquettes the pitch binder represents only from 5 to 10 per cent. of the whole mass, while in Germany and England the binder has run as high as 15 and 20 per cent.

Sawdust is another material which can be utilized in this way. There is a commercial demand for sawdust, but after it has been used for packing purposes and in icehouses, city saloons, and butchers' shops it is collected and disposed of as waste. Every day the city wagons cart away many tons of this waste sawdust and dispose of it in various wasteful ways. So far as briquetting it is concerned, this sawdust is just as good as before it was used. It has lost none of its combustible qualities. Properly dried, it would still burn. But sawdust is too fine and heavy to burn well. It will smother a fire rather than stimulate it. This is overcome, however, by new methods of briquetting. It is mixed with 20 per cent. of coarser waste, a small quantity of petroleum is added to it in the mixer, and then, with a soft binder of cheap pitch, it is compressed into commercial briquettes of great value. The oil and coarse material enable the flames to reach every part of the briquette, while the binder keeps the small pieces from falling apart until entirely consumed. A briquette of this nature will get red hot and retain its intense heat for a considerable time.

New machinery for collecting, mixing, compressing, and drying briquettes made of the different waste materials has been designed and made in the past few years, and the improvements in this direction promise further reduction in the cost of manufacture. Each plant has machinery more or less of its own designing, which will do the work for that particular factory better than if ordered from outside sources. The industry is still largely in the experimental stages, especially so far as that of utilizing waste material is concerned, and it must look to the future for a good deal of its profits. The present scarcity of coal has stimulated inventors and manufacturers so that the famine may not be without its ultimate good to the country. It is even confidently predicted that some forms of soil, such as thick clay and marl from low meadows and swamps will soon be utilized as fuel in this way. There is a fair amount of combustible material in these soils, and if they can be mixed with a small percentage of coarse, woody fibre, petroleum, and then a binder, they would make excellent fuel. Compressed into briquettes, they could then be transported with less dust and waste than ordinary anthracite coal.

PROF. DELITSCH ON THE BIBLE

Detailed Account of the Lecture by the Famous Babylonian Scholar Which Was Delivered Before the German Emperor and Approved by Him.

Foreign Correspondence NEW YORK TIMES.

BERLIN, Jan. 15.—A year ago a lecture bearing the sensational title of "Babel and Bible," delivered by the famous Assyrian and Babylonian scholar, Prof. Friedrich Delitsch, attracted the attention of the whole scientific and theological world. Additional interest was given to the subject by the presence of the Kaiser, who follows the results of Assyrian and Babylonian excavations with the greatest interest.

In order to obtain further testimony in support of his previous startling assertions Prof. Delitsch made a trip to the Orient last Summer, and last Monday evening he presented to one of the most select audiences that the writer has ever seen gathered in Berlin the results of his additional investigations. The Kaiser and Kaiserin arrived promptly at 8 o'clock, and with them were the Imperial Chancellor and Countess von Bülow.

When some weeks ago in private conversation Prof. Delitsch said to the writer that he would present facts in his second lecture which would displease the orthodox to a greater extent than had his first statement, he was not far from the truth. In fact, in his second lecture he presented testimony as to the Old Testament which will cause many to change their former views concerning that portion of the Bible. He asserts that the whole Jewish code of ethics, laws and commandments was not original, but had been taken bodily from Babylonian and Assyrian writings. He also declared that the Babylonian excavations made clear many passages of Scripture which heretofore had been obscure. Lantern slide pictures presented by the professor to the audience showed some of the objects found by the German Orient Society. Of the greatest interest was the dragon of Babylon, also mentioned in the Old Testament. It has the head of a snake with horns; the body of a panther, on whose hind feet are claws, and the tail of a scorpion.

Slides also make clear that the dismal Reem of the book of Job was not a peaceful antelope, but a wild ox. The mosaics representing this animal showed up in brilliant colors as if painted yesterday.

Prof. Delitsch next threw on the screen pictures of tablets dating back 5,000 years before Christ, containing the Ten Commandments, which the Old Testament tells us were given by God to Moses on Mount Sinai. The lecturer declared that the "revelation" of the Old Testament, scientifically considered, was untenable, for many of the remains of Jewish literature were not great religious canons. He said the book of Job, for example, contained passages which bordered on blasphemy; that the high song of the Psalms (Psalm 45) was a love song, for it contained the words, "Here, daughter, look, and give me your ear, and forget your people and your father's house, and if a King desires your beauty, fall before him, because he is your master."

"If this passage is to be considered as being Messianic," said Delitsch, "it reminds me of the excesses of the monk, who crosses himself three times if in the Latin psalm the word 'Maria,' meaning the oceans, is mentioned. After all, we do not need such 'revelation,' but only the revelation which we find in our hearts."

Prof. Delitsch maintained that former interpreters of the Old Testament misrepresented passages in the book and drew most arbitrary conclusions, frequently adding platitudes to hidden and obscure passages. Whole parts of the Old Testament were now made clear by recent explorations, he said; for example, the carelessly interpreted book of Daniel. It tells us a grewsome story of the insane and beastly King Nebuchadnezzar, which story in fact is merely based on a Chaldaic legend, which in poetic form brings down curses on Persia—that is, Cyrus. The book of Jonah on the other hand was merely the outburst of a vivid Oriental imagination, for therein we are told that the prophet was left in the belly of a fish. As a matter of fact, he says, this book was written some centuries later. "To be restrained by dogmatic narrowness from sacrificing erroneous conceptions," Delitsch declares, "is to sin against reason."

Furthermore if Scripture tells us that Christ cured the deaf by saliva (St. Mark, vii., 31-37,) we learn from the Babylonian discoveries that saliva and magic were closely related terms, just like the holy numbers three and seven. Also if in the Old Testament Jehovah appears to his people as a pillar of smoke in the day and a pillar of fire at night, the King Assur Haddon, King of Assur, receives the oracles with a pillar of smoke to his right and a pillar of fire to his left. The lecturer also declared that the story of leaving the sick to die in the lower regions, as told in the Old Testament, is of Assyrian origin. In fact, he said, the Oriental doctor who could not awaken the dead was not considered to be a doctor at all.

The story of the scapegoat driven into the desert is also of Babylonian origin. And just like the Babylonian gods, who eat and drink and then retire to rest, Jehovah in the cool of the evening wanders in the garden of paradise and refreshes himself with the odors of sacrifice. Jehovah speaks to Moses, and Moses to Aaron and to all the prophets; the gods of the Assyrians and Babylonians do exactly the same.

Delitsch's heaviest attack was directed against Jewish monotheism. That the Babylonians had the idea of one God three thousand years before Christ is proved by the records, which say that God is God—Jahu is God. Delitsch answers his critics, who claim that the Babylonians were image worshippers, that the same charge could be brought against the Catholic Church, although no one would presume to say that the images were worshipped for themselves and not for what they represented.

According to Delitsch, "an eye for an eye, and a tooth for a tooth," the festival of the new moon, the high priest's breastplate, the leavened bread, and even the Sabbath were of Babylonian origin. He said he had a high opinion of the ethical principles of the Babylonians, for he declared that even the moral precept of doing to others as you would like others to do to you had come from them. The professor also showed that the Babylonians had a high opinion of women, while the Old Testament considered them merely as chattels.

The lecturer said that the extensive legal tablets of Hammurabi, (nearly 3,000 years before Christ,) found in the lowlands on the Euphrates and Tigris have now been read in the original. In 282 paragraphs they form a thoroughly worked-out codex of a highly organized state.

Delitsch urged young theologians to study the life and customs of the Bedouins, whose Oriental humanity and traditions have remained the same as they were a thousand years ago. Just as many of these traditions have been handed down from mouth to mouth, so it is with the account of many of the miracles of the Old and New Testament.

Prof. Delitsch in his address said but little of the New Testament, but said he hoped to do so in a third lecture. He declared, however, that Luther in his translation of the Bible had entirely misunderstood the Decalogue and the heavenly Commandments, each of which belonged to entirely different periods. In conclusion, he stated that the aim of his investigations was to further the development of religion on the basis laid down by the Kaiser.

EDWARD T. HEYN.

NO NEED TO USE "DUMMIES" IN ORDER TO REDUCE TAXES

There Are Many Other Methods by Use of Which Assessments May Be Lessened or Payment Evaded Altogether—Obliging Brokers and Equally Obliging New Jersey Banking Institutions.

"SWEARING OFF" personal taxes is the system through which the combined wealth of 35,000 New Yorkers, estimated at about $4,000,000,000, is reduced each year to between $200,000,000 and $250,000,000 on the books of the Tax Department. The system discovered last week by District Attorney Jerome of the swindles perpetrated on the city through this "swearing-off" process is only one of scores of different methods by which those who have wealth of personality elude the tax collector.

This is the time each year that the offices of the Department of Taxes are thronged daily with hundreds of men anxious to evade payment on assessments on personality. Each person assessed carried in his or her hand a notice sent by mail from the Tax Department, which is the only prima facie evidence that the officials have of the identity of the caller. Man high and low on the ladder of wealth touch elbows. A man carrying a dinner pail, whose wealth it is plain can be estimated accurately at the price of his manual labor each day, will have as a temporary neighbor a man of millions. Both have to go through the same examination as to their holdings of the world's goods liable for taxation, not including real estate. Hundreds of workingmen are notified that the tax officials have placed their personal belongings at $10,000 to $20,000 when a dollar or two would cover their value.

This comes about through the use of the personal tax "drag net" which the tax officials cast every year. Of course, they claim it is impossible to find out how much a man is worth under the present laws because of the elusive nature of personal property and their lack of authority to find out by inquisitorial or other process what a man really owns in stock, valuable paintings, money in bank, or the many other forms of wealth. The method is to take names from the directory or the registry list of voters, and if the person lives in a good neighborhood the officials assume that his wealth is sufficient to be taxable.

Instead of finding out what a man is worth in personal property and proving it the method is to guess at what he is worth, and compel his attendance at the Tax Department to show that he is not so wealthy. "If you think I am worth $10,000 find it, and I'll give the city every cent," is one of the most frequent statements by poor men who become irate when they receive notices of what the city officials think they are worth.

Of the 35,000 names placed on the list each year an average of more than 30,000 have their names entirely removed from the assessment rolls, and the remaining 5,000 pay a very small tithe of the actual value of personal holdings.

The first large loophole through which many escape the very heavy burden of personal taxes is in the Tax Department itself. It has become an unwritten law of the officials to assess wealthy men for about as much as they are willing to pay in personal taxes. The reason for this is that they can claim residence in their country places out of the city, and so escape all personal taxes. If a New York millionaire shows a disposition to pay personal taxes on from $100,000 to $300,000, the officials never increase the assessment, although it is known that the wealth in stocks and other assessable property is hundreds of times more than the amount placed in the lists. The tax officials consider that when New York's millionaires pay personal taxes in goodly sums that they are patriotic citizens of the metropolis.

A few years ago, when there was a disposition on the part of the officials to force larger payments on personal property, there was an exodus of rich men to Newport and other places. They had their business places as usual in New York and their residences here, but they declared their real homes to be their country places. The tax officials could do nothing.

MISLEADING STATEMENTS.

The next most popular method of evading the personal tax collector is through misleading statements given when examined by a Tax Commissioner. That thousands of New Yorkers make misleading if not perjured statements as to their wealth each year is known to all officials. No prosecutions have ever been attempted because of the difficulty of obtaining proof that a person has sworn falsely as to his wealth, and secondly, because the officials of the Tax Department are in a quandary whether false statements made under oath at their examinations may be regarded as perjury under the Penal Code. The tax officials are afraid to make a test case because a decision against the city would mean the break down of the fear which the city holds up to force payments.

Another method by which Wall Street men evade personal taxes is by a system started of late years through which loans of non-taxable securities are made for a day or so. For instance, a man who has bank accounts aggregating $1,000,000 and who does not want to trouble his conscience by making false statements on examination makes arrangements with certain firms who at this period of each year make a business of loaning for one day $1,000,000 or more of non-taxable securities and the person assessed places his $1,000,000 out of his reach for one day. He then goes to the Tax Department and makes an affidavit that his wealth is $1,000,000 in non-taxable bonds or other securities. His oath is technically correct, yet the following day he returns the securities and again becomes possessed of his $1,000,000 in cash, paying a comparatively small sum for the loan of the securities. There is a saving of about $20,000 a year on each $1,000,000 of assessable personality. When these sums mount up in the billions the tax officials say that it is plain what a large sum of money is lost to the city by this method.

EVASION MADE EASY.

The evasion of personal taxes is easy because the law assesses a man's personal wealth on the second Monday in January of each year. Many men of wealth arrange so that just prior to the date of the levying of assessments their holdings are transferred to Dummies or office boys and they go to the Tax Department and make statements which force the officials to lower or wipe out the assessments.

One of the latest schemes which have become popular this year is called "banking by ferryboat." In other words, the deposit of cash and taxable securities during the assessment period in New Jersey banks. Many banks and trust companies in Hoboken, Jersey City, and Newark solicit New York business with the understanding that collectors will call at stated times for deposits which are entered in passbooks. The argument urged by the New Jersey institutions is that the New Yorkers can escape the tax collector by the shifting of bank balances just before the tax list is made up. If a person is a resident of New York, in theory he does not escape taxation, but through his statements at the Tax Department his assessments may be wiped off without chance of trouble over a false oath as to deposits. If a person is a non-resident and is assessed on personal property, the shifting of the bank balance relieves him from payment on the account, which, if continued in a New York bank, would be legally taxable.

Another method adopted by the tax evaders is to carry for a short period mortgages, which are not liable to taxation. The latest plan of swindling unearthed by District Attorney Jerome of the use of "dummies" to go into the Tax Department and represent themselves as men who have been assessed for large sums, has been going on for several years in a desultory way. This year the Tax Department declared that more rigid inspection would be made to force the owners of large amounts of personal property to pay, so that the burdens on real estate could be lightened. These statements led the plotters back of the tax frauds to renewed activity. They all claimed to have political influence with politicians, and in no instance was the method by which the assessments were reduced revealed to the wealthy "clients."

Before the Tax Commissioners it was easy sailing. The politicians introduced the "dummy" for the wealthy New Yorker, and it was also made certain that the "dummy" and the Tax Commissioner had never met before. The questions were answered glibly and the assessments reduced or wiped out entirely. The charge for these criminal acts was 50 per cent. of the amount of the taxes. The taxpayer would thus save on an assessment of $100,000 which was wiped out $320, half of which sum would go to the conspirators.

The reason always assigned by wealthy men in private for "swearing off" their personal taxes is that if they honestly complied with the law the taxes would be equivalent to confiscation of property. A man holding stock which pays no dividends or other securities which pay annually a percentage annually would not have a dollar on their investments if personal taxes were paid according to law. Last year the rate was $2.35 on each $100 of valuation, and this year the rate is estimated at $2.50 by Controller Grout. A man owning 6 per cent. securities would thus have to give the city more than half of his revenue in taxes or go through the "swearing" process. The hope of the Tax Department officials this year is that a larger sum will be collected and fewer millions of assessments sworn off because of the reduction in the tax rate caused by the increase in assessments on real estate.

LARGEST SAILING VESSEL IN WORLD

Recently Built in the Yards of a Busy German Firm.

THE extraordinary activity displayed by the builders and managers of German steamship lines during the past three decades has been equaled by the energy shown in constructing sailing vessels of the latest type. Within the past few weeks one firm at German shipbuilders has completed what will be probably the largest sailing craft in the world. According to a report received by the State Department from Henry W. Diederich, United States Consul at Bremen. The following is the record of the year's work of but one of several firms to whose activity Mr. Diederich calls attention:

"At the end of its business year, (May 31, 1902,) the Tecklenborg Company, at Bremerhaven, capitalized at 2,000,000 marks ($476,000,) paid a dividend of 20 per cent. This concern was occupied to its utmost capacity during the entire year, and the repair and dry docks were continually in use. Six double-screw freight and passenger steamers and two very large sailing vessels were building, of which three steamers and one sailing vessel were delivered to the owners. This firm is famous all the world over for building sailing craft, and the vessel completed a few weeks ago is probably the largest in the world. Her name is Preussen. She is a five-masted, full-rigged steel vessel, steel-spurred throughout. Her length is 440 feet, beam 50 feet. She has a carrying capacity of 8,000 tons, while her registered tonnage is 4,900. Recently she started on her first voyage to the west coast of South America. At the close of its business year this company had four vessels under construction, and orders were booked for one lighter, one fishing steamer for the high seas, and one sailing vessel. The building of these seven ships and also of a bridge will keep the plant busy for some months to come."

No Room to Move.

SHE was evidently a young lady of literary proclivities, for she carried under her arm a formidable array of books, and as soon as she entered the Sixth Avenue elevated train she sank down into the first seat she saw and began industriously studying one of her ponderous tomes. She never noticed that the car had become more and more crowded, but went serenely on reading and marking and letting down items and behaving with the same unconscious ease that she might have displayed in her own private library. All at once her umbrella was knocked out of place by some hasty foot in passing. Being too much engrossed to look up at the offender, she simply grasped the handle and endeavored to replace the umbrella in the place from which it had been kicked. Something was in the way, though, and the young lady, thinking that the matting on the floor had probably loosened, continued vigorously to work at her umbrella. The little billy place would not give, however, so she gathered all her reserve strength, carefully put her thumb in her book, and devoting her entire attention to the umbrella pressed heavily upon it. Then, and then only, some one leaned kindly down. "Pardon me, lady," said a pained voice in her ear, "but that's my foot and I have an ingrown toenail. I really can't move it, you know; there isn't room." The girl looked up, and her eyes encountered those of a young man with blonde hair and a silk hat. He laughed and his companion, also topped off by a silk hat, laughed too. The girl flushed very red. She knew they were making fun of her, so she tossed her head. "Why don't you have it pulled?" she said, and went on with her book.

HOW BIG SUBMARINE CABLES ARE MADE, LAID, AND WORKED.

Repeated Tests of the Wire During the Process of Manufacture—Special Steamers for Carrying Material and Making Repairs—Messages Recorded on Siphon Tape.

DURING the past year the subject of transoceanic telegraphy has received considerable attention, not only from those who are engaged directly in this line of work, but from the general public, particularly those who read the newspapers. The announcement was made a few months ago that a transpacific cable had just been completed and was in operation for the first time. On the first day of the new year greetings were exchanged between Hawaii and this country over the first cable, just completed, between these islands and the continent, and it is announced that this is the first link in a long copper wire which is soon to unite this country by direct electrical communication with the Philippines.

In the meantime Marconi, who just about a year ago first transmitted signals across the Atlantic, has been working hard to perfect his system of wireless communication, and has just announced, as every one who reads the newspapers knows, that he has succeeded in sending messages between Nova Scotia and England, above the surface of the water, while the cables were carrying messages along the ocean's bed.

There is something of mystery about the ocean cables to the average person. The telephone and the telegraph and their wires are familiar sights, but the long ocean cables usually are landed at inaccessible and out-of-the-way spots, where the cable stations are visited by very few outside the staff of operators, and when once submerged the cable itself is lost to sight in the ocean's depths, so that how the cables are made and where they are laid and how they are operated are matters with which few outside of the cable industry are acquainted.

A submarine cable—say, for purposes of illustration, a long transatlantic cable—is made up, essentially, of four distinct parts, namely, the copper wire, the insulating covering of the copper, the hemp or jute serving, and the sheathing. In considering the construction of a cable the first thing to take up, naturally, is that part which carries the current by means of which the signaling is done. This is the copper wire which forms the innermost part of the cable, all of the rest of the cable, no matter what its size, serving merely as a protection, in one way or another, for this copper wire or conductor. The conductor is usually made up of a number of strands of smaller wires twisted spirally together to form one large conductor, in the case of a typical cable about one-eighth of an inch, more or less, in diameter. The use of a number of wires twisted together makes the completed conductor more pliable and easy to work than a single wire would be, and it makes a break less liable to occur.

COVERING THE WIRE.

At the cable factory this copper wire, after it is stranded and tested and ready for the next step, is passed through machines which give it a covering of gutta-percha. The wire must be covered with something which is an insulator, or non-conductor, of electric current, and gutta-percha is such a substance. The insulating covering must be applied with the greatest care, as so little a fault even as a pin-hole through it, permitting the water to touch the copper, anywhere throughout the two thousand or more miles, would make the cable bad or entirely useless for signaling.

The copper wire, covered with gutta-percha, forms what is known as the core of the cable, and is really all that would be necessary to afford communication, for the sending of cablegrams, if this core could be sunk to the bottom of the sea and would remain there without injury. But it is impossible to use the core alone, as this made, because of mechanical, and not electrical, considerations. Aside from the fact that the gutta-percha is comparatively soft, and therefore easily cut or punctured, something which would be fatal until repaired, the cable must be heavy enough to sink when laid from the ship; it must be strong enough to sustain its weight when suspended from the ship into the water, when being laid, and to sustain the weight which comes upon that part of a cable which rests upon a submerged mountain peak while on either side the cable hangs downward toward a submerged valley; it must be protected to avoid chafing on the rocks; and it must be strong enough, after lying submerged for years, to be picked up for repairs, should such be necessary, at any point. For these reasons a covering of iron wires is provided. The core, which may be about one-half inch in diameter, is covered with hemp or jute, and is then passed through the sheathing machine, which puts on the iron wires, spirally, and this completes the cable unless, as is sometimes the case, canvas or tape of some sort is put over the outer sheathing wires.

SUBJECTED TO MANY TESTS.

During the time of manufacture the cable is continually subjected to tests of various sorts, electrical and mechanical. When finally completed, it is loaded on the cable steamer, and here, from the time it comes on board until it safely rests upon the bottom of the sea, it is subjected to a continuous test, which will indicate any fault as soon as it may develop.

Every one of the longer ocean cables, up to the present time, has been made by British manufacturers, and these cable-makers have their own cable steamers, built and equipped and maintained for the express purpose of laying—or, if called upon, repairing—submarine cables. Since the Great Eastern was chartered for the laying of the 1865-1866 Atlantic cable by the company promoted by Cyrus W. Field, many cable ships have been built, and now not only do the cable makers have ships, but many of the cable companies themselves own and maintain cable steamers for making repairs to their cables.

BIG SPECIAL SHIPS.

As an indication of the size of some of these vessels and the work they do, it may be stated that one of these cable ships has laid enough cable to reach, if in one continuous length, entirely around the world. This vessel has three cable tanks, all thirty feet deep, the fore tank being thirty-seven feet in diameter and the others forty-five feet in diameter each, and having a total capacity of 2,000 miles of cable. An idea of the size of these tanks may be had by considering that a moderate-sized house could be contained in one of them, with room to spare.

Another large vessel, a new one just recently built for the cable manufacturing company that made and laid the new British Pacific cable, can carry about 4,000 miles of cable, which is a greater length than could be put aboard the Great Eastern when she was engaged in laying cable. This vessel is 500 feet long, 56 feet beam, and designed to carry close upon 10,000 tons dead weight.

When the cable is taken on board the cable steamer it is very carefully coiled in the immense water-tight tanks. As the cable comes on board it is passed down through guides into the tank, where men are placed to guide and lay it carefully in layers, starting from the outside and coiling toward the centre. When one layer is completed another is started, and so on, until hundreds of miles of cable have been placed in a tank. Such great care is necessary in coiling because sometimes, when being laid, it moves out of the tank and through the paying-out machinery at a rapid rate, a speed of 10 knots or more per hour having been reached.

When all is ready, and the ship fully manned and equipped for what may prove to be a long time at sea, although in the case of an Atlantic cable nowadays it is not such a very long time, she sets out for the point where a beginning is to be made in the laying of the cable. The course the vessel is to follow is all marked out previously on the chart, and soundings are taken all along the route to determine the depth of water, nature of bottom, &c.

The cable ship may start out with only a part of the cable, if it is not all completed, and lay this, and then return to the factory, take on the remaining portion, and lay this remainder, splicing on to that which has already been laid. This, in fact, is the way in which one of the more recent Atlantic cables was laid. Another way, which is quite usual nowadays, is for a single ship, having on board all of the entire length of cable, to start from one landing point, and continue straight on to the other landing point.

When landing a shore end the vessel gets as close to the shore as possible, and the heavy cable is then floated in to the shore on rafts, or by the use of large bags filled with gas, which keep the cable from dragging over the rocky bottom as it is hauled ashore by a rope passed through a pulley on shore and carried back to the vessel. The "balloons," when they are used, are detached as fast as the cable is drawn ashore, and the end is taken in a trench up to the cable hut, which is often a small wooden hut situated only a short distance from the water. In the hut a temporary testing station is erected while the end is being brought ashore, and as soon as the cable reaches the hut it is connected to the testing apparatus, and tests are begun. The cable ship has the end on board also connected to the testing apparatus, and the testing now goes on continuously, both by ship and shore, as the ship proceeds over the course.

Means are provided for sending messages also, and while the ship is in mid-ocean and continuing on her way, reports of the progress from day to day and of any occurrences of importance on ship are sent to the shore, and in return the men who are at the shore end send to those at sea news of what is going on in the world and messages relating to the work. So well is the work of a cable-laying expedition done nowadays, because of past experience, that when a start has been made the work goes on uninterruptedly, usually without any serious difficulty, and the cable is laid at the rate of perhaps 200 miles in 24 hours.

HOW MESSAGES ARE RECEIVED.

Because of certain electrical properties of submarine cables, known as resistance and capacity, it is impossible to get enough electrical energy through to the receiving end to operate the ordinary relays, &c., such as are used on land telegraph lines, at any speed approaching a practicable one. The energy at the receiving end is so very small when working at a speed anywhere near a paying one, that a very delicately adjusted and very sensitive instrument must be used as a receiver. In the mirror instrument, which was used in the early days of ocean telegraphy, the very small current coming in from the cable to the receiving station passed through a coil of wire in which was delicately suspended a tiny magnet, to which was attached a tiny mirror, about one-half inch in diameter.

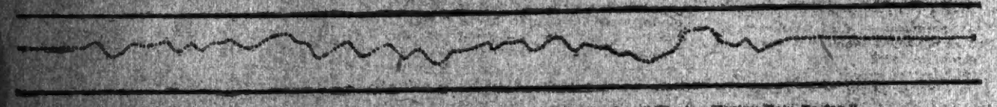
A ray of light from a lamp fell upon the mirror, and the received current, sent from across the ocean, and passing through the coil, caused the magnet to swing, and this carried with it the mirror. The reflected ray of light from the mirror was thus caused to move along a screen placed before the instrument, and the operator read the message by watching this spot of light move to right or left on the screen, the spot moving to the left when a dot was sent, and to the right when a dash was sent.

The mirror is still used on board cable ships, and in places where a receiving instrument is wanted to be operated temporarily on a cable, but the siphon recorder is used on practically all long cables to-day. This is an instrument which has delicately suspended between the poles of a powerful magnet a coil of very fine wire, to the upper end of which are attached very fine silk threads, extending to a small piece of metal, on which is hung a very delicate glass siphon. The upper end of the siphon dips in an ink well, and the lower end almost, but not quite, touches a strip of paper which is drawn along beneath it. The ink flows through the siphon, which is kept constantly vibrating in a plane at right angles to the paper. When no signals are being sent the ink line is along the centre of the strip, and the sending of signals causes the suspended coil to move, and this in turn, pulling on the silk threads, causes the glass siphon, which is making the ink mark, to move. In this way a wavy line is traced on the paper, and it is this line which the operator reads in reading the cabled message. It requires long and careful training to read these messages, and there are few telegraph operators who can read this "cable slip" from a long cable accurately, particularly when it is considered that very nearly all cable messages, aside from press, are sent in code, which requires every letter of a word to be accurately read and recorded.

There are something more than a dozen cables across the North Atlantic now, and also across the Atlantic further south, and practically every civilized community, excepting smaller islands of the sea, has cable communication with the world. The Pacific Ocean, up to within a few months ago, had not been crossed by a cable; but the British Pacific cable, recently completed, enabled a message to be sent entirely around the earth by wire for the first time. The shore end of the Commercial Cable Company's new Pacific cable was landed at San Francisco on Sunday, Dec. 14, and this cable, when completed, will for the first time place the United States in direct cable communication with the Philippines. Communication was opened over the cable as far as Hawaii on last New Year's Day.

The Atlantic cables do not cross directly from England or the Continent to New York, but make landings in Newfoundland or Nova Scotia. When a cable is increased in length the speed at which it can be worked, that is, the number of letters per minute, (the speed of a cable is reckoned in letters per minute, and the average of the speeds at which the Atlantic cables are normally worked is perhaps a little over a hundred letters a minute each way,) decreases with the square of the length.

The cable companies, naturally desirous of getting as many messages as possible through these sunken copper wires of theirs, which cost them, roughly, about a thousand dollars a mile, bring the cables in land at the nearest practicable point on this side of the Atlantic, and then connect by shorter cables or land wires to New York, which is, of course, the great centre from which cablegrams issue, and to which they come. The messages are sent from the United States to these relay stations in Newfoundland or Nova Scotia, and from there are repeated, or "translated," by the operators into the long cables, and similarly the messages coming in the United States are translated at these points.



Trans-Atlantic Cablegram Received on Siphon Recorder Tape, Which Reads: "We Are Having Rain To-day."

"MAINE" HERO RESTS IN HISTORIC SPOT

Anthony's Grave in Path Used by British at Battle of Long Island.

VISITORS during the past week to the Cemetery of the Evergreens, in Brooklyn, who are students of American history and who have given particular study to the incidents and details of the battle of Long Island, in the days of the Revolution, have made the interesting discovery that the last resting place of "Brave Bill" Anthony is in historic ground. This hero of the tragedy in Havana Harbor, which hastened the conflict between the United States and Spain, lies in the very path followed up the British under Lord Howe when they stole around to the rear of the American forces in the battle of Long Island, and, surprising the patriots, effected their defeat.

The grave of Anthony is on a gentle slope dipping down into a little valley near that part of the cemetery called Beacon Hill. In the days of the Revolution this vale was known as Jamaica Pass. From the Jamaica Road, as it was then known, at a point which is now Jamaica Avenue and Fulton Street, East New York, this pass, to-day given over to resting places of the dead, wound through the hills to the northwestward, twisting and turning until it became a lane, which was known as Rockaway Path, and which led into the Jamaica Road, some distance to the westward.

When Lord Howe, with his redcoats and Hessians, crossed from the British camp on Staten Island to Long Island, and prepared to move from the shore of New York Bay upon the Americans intrenched in Brooklyn, he found that there were four routes by which the important positions established by the patriots could be approached in force. These were the Coast Road, Flatbush Pass, Bedford Pass, and, in the rear of the Americans, Jamaica Pass. Leaving half of his forces to engage the Americans on the south, Howe, with Sir Henry Clinton commanding his advance guard, made a wide detour through Flatlands and what is now East New York, with the idea of taking the Americans in the rear. The British commander found that all of the passes mentioned, with the exception of Jamaica Pass, were strongly guarded against attack. The patriots, apparently expecting no more from that quarter, had neglected to properly guard and patrol Jamaica Pass, to which Howe marched stealthily in the night. When Clinton in the van reached Howard's Half-way Tavern, which stood near the entrance to the pass at what is now the junction of Jamaica Avenue, Broadway and Fulton Street, East New York, he compelled the young son of Major Howard, the innkeeper, to guide him and his men through the pass and along the Rockaway Path. The British came out again upon the Jamaica Road, near what is now the Bedford District of Brooklyn, taking the Americans by surprise in the morning and compelling them to retreat upon New York.

In this historic ground, where on that night in the days that were making for the creation of the great Republic, the long, silent column of redcoats wound stealthily through the hills to deal a heavy blow to the patriot cause, sleeps "Brave Bill" Anthony, hero of another conspicuous day in American history.

New Style of Street Car.

A NEW type of streets cars is being made for the Twin City Rapid Transit Company, which operates lines in Minneapolis and St. Paul, and by its use the managers believe they will be able greatly to facilitate their service. Separate entrances and exits through the rear vestibule are contemplated, and a plan is being worked out for a means of ingress through the motorman's cab. Both the front and rear vestibules are to be lengthened a foot or two. A partition will divide these vestibules in half. At the right will be the entrance, and at the left the exit. Thus passengers may enter and leave the car without jostling. It is believed that with the separate entrances and exits the time for stops will be reduced by one-half.

Things to be Had for Nothing.

THERE is no city in the world where a woman, during a day's shopping, can get so many things for nothing as she can in New York. Men and women are employed especially to make her comfortable. In any one of a dozen large department stores there is a parlor where she can write all the letters she wishes to, make appointments with her friends by telephone, find a maid to wait upon her, a compartment to put away any purchases she may make, and have them all tied up until she is ready to take the train for home.

She need not leave any one store all day if the weather happens to be bad. She can get an excellent meal there at a reasonable price. As she wanders around demonstrators are constantly tempting her to try a cup of chocolate or some kind of breakfast food, served with cream on dainty little dishes. She may collect no end of artistically illustrated booklets and samples of special foods to take home with her. In at least two stores she may hear a really good concert by well-paid musicians, either in the morning or afternoon. If she is accustomed to buying one particular brand of coffee or tea she gets a premium card with every pound that in time enables her to get for nothing a handsome piece of furniture or a set of books.

THE HEAVENS IN FEBRUARY.

Beauty of the Zodiacal Light, the Strange Phenomenon Which May Be Witnessed in the Western Sky After Twilight—Disk of Venus Grows Every Evening.

THOSE who carefully observe the western sky after twilight this month will see a soft, nebulous column of pearly light, generally conical in form, extending upward from the western horizon to a point in the heavens not far from the Pleiades. The delicate and shadowy phenomenon is the Zodiacal Light. It is seen to the best advantage in February, March, and April. The same phenomenon is also visible in the eastern horizon before sunrise in September. Its limits are very difficult, indeed, to determine. Its base varies between 8 degrees and 30 degrees. The apex of the cone attains a distance from the sun that varies from 50 degrees to 70 degrees, and sometimes more, as the edges are ill-defined. The light in northern latitudes is generally, though not always, inferior to the Milky Way, but is seen to greater advantage in the tropics.

Humboldt records it as almost constantly visible in these regions and luminous enough to cause a sensible glow on the opposite part of the heavens. In a clear atmosphere it has been traced all the way across the heavens, from east to west, forming a complete ring. The Zodiacal Light is claimed to be due to a lens-shaped appendage surrounding the sun and extending a little beyond the earth's orbit.

Its cause is not certainly known, but the theory quite largely accepted attributes it to sunlight reflected from an immense cloud of meteorites filling up the space between the earth and the sun. The phenomenon is of exquisite delicacy and beauty, and observers who can get away from the electric light, gas, and smoke of the city may hope, in a purer atmosphere, to behold in perfection this mysterious appendage of the sun.

Sunrise to-day is at 6 hours 58 minutes A. M. and sunset at 4 hours 57 minutes P. M., making the length of the day 9 hours 58 minutes. The sun rises on the 28th at 6 hours 23 minutes A. M. and sets at 5 hours 32 minutes P. M., making the length of the day 11 hours 9 minutes, quite a considerable gain, although the temperature during the first part of the month will probably hardly indicate much progress north on the part of the sun. To-day the sun's declination is 17 degrees 21 minutes south, and on the last day of the month it will be eight degrees eighteen minutes south, showing a northerly movement of nine degrees.

It is pleasant to know that this speed toward the line is continually on the increase throughout the month.

The first phase of the moon for the month is the quartering of the January moon that occurs on the 5th, followed on the 11th by the full, and that by last quartering on the 19th. The new moon for February does not come until the 27th. On the 8th there is conjunction between the moon and Neptune, and there will not be another similar phenomenon until the 15, when Mars's turn comes.

On the 21st the waning crescent and Uranus come within 5 degrees of each other, the planet being the further to the south. The next is Saturn on the 24th with almost the same amount of space separating the two, the planet again being found south of the moon. Some eight hours later Mercury receives a visit which will not result in much of the spectacular. On the 26th, just as the old moon is about to give place to the new, Jupiter and one satellite have an encounter. Just what will happen will not be visible to the naked eye, as both bodies are much too close to the sun, whose all-powerful rays engulf them both.

The moon occults every month all the stars and planets that lie in her pathway. Planets sometimes occult stars, but a planet occulting a planet or even coming as near as Venus and Jupiter did two nights ago is of sufficiently rare occurrence to be of exceedingly great interest. It is to be much regretted that our neighbors were so near the sun that their usually brilliant faces were not disclosed to us under circumstances sufficiently favorable to be as appealing as we sometimes have them.

Jupiter is evening star until toward the middle of the month, when he is in conjunction with the sun and passes to assume charge of the merry twinklers of the early dawn. Already he sets only an hour after the sun disappears, and, if we want to see him, we must get where we can command a clear view of the western horizon.

The eclipses, occultations, and transits of Jupiter's satellites afford an endless series of interesting phenomena to amateur observers who have access to telescopes. The Nautical Almanac gives a daily record of these configurations, which is all the help an observer needs when it is supplemented by a telescope, even a small one bringing Jupiter's brilliant cortège into the field. Just at present, however, we need not strain our eyes endeavoring to discover Jupiter's dependents, for, owing to the close proximity of the planet to the sun, they will not be visible until March 19.

Venus is evening star par (or perhaps it would be more proper to say mal) excellence, and already affords us great satisfaction in watching her beautiful disk as it grows larger and more brilliant each succeeding night. The conjunction between this planet and the moon that takes place on the last day of the month, as astronomically reckoned, although in March from the point of view of the calendar, is the closest one of these monthly meetings. Even at this there is quite an interval of clear sky separating the two.

The beautiful queen of the evening, luckily for us, takes until July 9 to reach the furthest point that she is permitted to get on the eastern side of the sun. After that, however, she only takes until Sept. 17 to retrace her steps and once again hide in the sun's bright light.

Mercury is about changing with characteristic nimbleness from an evening to a morning star, and on the 27th will reach the point of greatest western elongation from the sun. On the 13th Mercury and Saturn are in conjunction, and on the 24th there will be a conjunction in which the moon and planet participate. As the 27th is one of the dates when we are permitted to have our best view of Mercury, the keen-sighted ones may possibly be favored with a view of this meeting with our satellite. Two or three days on either side of the time for greatest elongation to the east or to the west we can generally manage to catch a glimpse of this most elusive of all the planetary brotherhood.

There will be two other opportunities during the year when we may possibly see Mercury as a morning star fairly low down in the east, just a little while before sunup, June 27 and Oct. 18. On the first of these dates the planet will rise an hour and a half before the sun, which is about the period of time Mercury will get up ahead of daylight on the 27th of this month. On Oct. 18 he will, however, be somewhat later, so that we probably shall not be able to see quite so much of him at that time as we may reasonably hope to do this month.

Neptune is an evening star and is fairly well identified as to his location among the hosts of brighter twinklers surrounding him by the moon, with which he comes in conjunction on the 8th. This planet is in the constellation of the Twins, and plays but a minor part for our amusement this month. He is moving toward the sun, and next month we shall find him in quadrature, or half way between opposition and conjunction with the sun.

Mars is a morning star throughout the month and is speeding along on his way to opposition, which he will reach next month, and then for the rest of the year we shall have him ranking among the evening stars. He rises about 10 o'clock and will manage to repeat that performance at a somewhat earlier hour each successive evening, until we shall find his ruddy face popping up over the horizon line just in time to wink at Old Sol as he disappears below the western line of the horizon.

Saturn is now a morning star and is gradually drawing away from the sun, in whose rays he has been hiding for some weeks. He is temporary lord of the morning stars, waiting to yield place to the mighty Jupiter when he emerges from his invisibility and shines with renewed lustre after polishing up in the sun's rays. How delightful it would be during this inclement weather if we could take a trip to Saturn and do away with all bother concerning coal strikes and the high price of fuel. The scientists tell us that Saturn's surface temperature is heated to a point greatly in excess of that of the earth.

Uranus fails to help out our season's programme, but he will do a little better for us later on. His right ascension at present is 17 hours 35 minutes, and his declination 23 degrees 26 minutes south, which places him close to the Water Bearer. From this position he moves but little throughout the month.

OLD HOLLIS HALL.

Explanatory Bronze Plate Attached to the Famous Harvard Dormitory.

CAMBRIDGE, Mass., Jan. 30.—The Harvard Memorial Society has just attached to Hollis Hall, the oldest Harvard building still used as a student dormitory, an explanatory bronze plate for the benefit of visitors to Cambridge as well as of undergraduates to whom the traditions of the college are sometimes lost sight of in the daily activities of the modern university. The new plate is the third step in accurately designating the older buildings. Massachusetts and Harvard Halls have already been marked in the same fashion, and others of the older structures, as well as various sites of historic interest, are sooner or later to be added.

Cambridge is particularly rich in historic associations, most of them clustering naturally about the college in which the people of the struggling colony always took so personal an interest. Near where the present Law School stands, for example, was the Holmes mansion, which in 1775 was the headquarters of the Committee of Public Safety, and from the steps of which President Langdon prayed for the safety and success of the thousand patriots gathered in Cambridge on the eve of Bunker Hill. From here the famous Washington Elm is still visible across the old Cambridge Common, where the American Army was encamped in expectation of the coming of Gen. Washington. Wadsworth House, in the college yard, was Gen. Washington's first Cambridge headquarters. Later, in 1777, Burgoyne's captured army was sent from Saratoga to Cambridge for safe keeping, and Burgoyne himself was quartered in a house still standing within a stone's throw of the yard.

The new tablet on Hollis Hall reads as follows:

HOLLIS HALL
Built by Province of
the Massachusetts Bay
in New England in 1763

Named in honor of
THOMAS HOLLIS
of London, Merchant,
and other members of the
same family, constant and
generous benefactors of
Harvard College from
1719 to 1804

Used as Barracks by
Colonial Troops in 1775-76.

But this inscription represents naturally only a small part of the human interest that attaches to the simple old brick building, which is practically the connecting link between the eighteenth and twentieth century undegraduate and which has been for nearly 140 years the college home of an unending procession of young Americans. Built twenty years after the graduation of James Otis, the young men who roomed in Hollis doubtless helped swell his audience at the famous address made before the General Court of Massachusetts, when that body had temporarily moved its headquarters out from Boston to Harvard Hall. In those days there were no professional schools, and the yard was occupied entirely by the "young gentlemen of the college"—a condition about to be restored by a new law regulating the occupancy of "yard rooms" and restricting them to undergraduates of the college proper as distinguished from students in the various professional schools and graduate departments of the university.

Many a story of college pranks—such as the leap of an early student from the roof of Harvard Hall, where he had been caught attempting to extract the tongue of the college bell, to the roof of Hollis—is connected with the old building.

But more interesting than any of these escapades are the memories of the famous men who spent some portion of their younger life in its ancient rooms. Henry David Thoreau, for example, spent four years in Hollis, occupying successively four different rooms. Ralph Waldo Emerson, after his first year in Wadsworth House as "President's Freshman"—an office not unlike that of the President's secretary nowadays—also had rooms in Hollis. Charles Sumner roomed in the same building, as did Wendell Phillips, Caleb Cushing, who was nominated by Grant to be Chief Justice of the United States Supreme Court; Edward Everett, Prescott, the historian; Charles Francis Adams, B. R. Curtis, the jurist; Hilliard, Judge E. Rockwood Hoar, and Horatio Greenough. There was also Charles Angier in the latter part of the eighteenth century, who, according to an old account, kept his room "always supplied with wine, brandy, and crackers, of which his friends were at liberty to partake." This room survived in sailor memory as the present No. 8. Nearly half a century later Thoreau, whose preference in food was simply for that which was nearest, planned in the same room his first camping trip to the pond near Concord which he was later to make famous by choosing as the location of his historic hermitage, and as the title of his chief book, "Walden."

Wendell Phillips's room in Hollis was much frequented by Southerners, it is said, then the most dashing among the Harvard undergraduates; and it was here that the beauty of his figure led his companions to measure him to find out how his proportions compared with those of the Greek statue of Apollo. Here also he planned his crusade against the first attempt to form a temperance society at Harvard—an action which he declared in later life that he counted as "an infamy." It was probably in Hollis that Wendell Phillips afterward spoke of seeing the light burning night after night in Sumner's window when Phillips and his companions were returning from their evenings in Boston. It was in Hollis, also, that Prescott, slowly recovering from the accident that deprived him of the use of one eye, awoke to a more serious attitude toward life and began the work that afterward gave him his important place among American historians.

MODERN METHODS IN SHIPYARDS

Many Labor-Saving Devices Utilized by New Jersey Firms.

HALF a century ago New York City was a great shipbuilding centre, but at the present time New Jersey claims the distinction. It points with pride to the fact that it has discarded the old-fashioned methods of building ships, and that it uses electricity instead of the cumbersome machinery and hand work employed by a past generation.

A walk through the premises of a modern shipbuilder is replete with interest to any one who cares to study labor-saving devices. The yard of one of the most important builders in New Jersey contains three shipways and one dock, together with all the subsidiary plant. Neither wind nor weather can interfere with the work of constructing vessels, as the dock and two of the shipways are covered by steel sheds wide anough to accommodate ships of enormous dimensions and sufficiently high to clear the tops of the masts. One recently completed vessel was 625 feet in length.

The columns upon which the roofs of the sheds rest are made to serve a double purpose, as they support a runway for a 100-ton crane, which can traverse the entire length of the ship. At a lower level are three runways for cranes of smaller capacity.

The entire plant is put in action by electrical, pneumatic, and hydraulic power, which stretches out in every direction, automatically seizing the shipbuilding material and cutting, shaping, and conveying it to its appointed place.

Cranes of the very latest type are found here in abundance. The crane which is used to carry immense plates of steel lifts its load by the direct action of electro-magnets, thus rendering it unnecessary to adopt the old-time plan of attachment by hooks and chains. To the ends of the crane, where hooks would ordinarily have been placed, are two big electro-magnets operated by direct current controlled by a switch. These are lowered, also by electricity, until they sit flat on the plates, and when the current is turned on, the cores of soft iron become powerfully magnetic, and the plates are instantly lifted. The number raised at one time depends on their thickness and weight, but on an average as many as six plates, each measuring 12 feet by 4 feet, can be lifted by one application of the magnet.

All the larger tools in the machine shop are operated by alternating current electric motors, and the small tools are arranged in groups over motor-driven shafting.

An elaborate telephone system places all the workmen in communication with the various departments, so that drawings, tools, and materials can be asked for and received without delay. Electric elevators are in constant use to convey up and down to the temporary bridges on which the workmen stand messengers, helpers, and Superintendents. These bridges are built out from permanent platforms, which run the entire length of the sheds, and are arranged so that every part of the ship can be reached from them. The lighter materials used in the construction of the vessels are also carried in the elevators.

In the mold loft hydraulic and pneumatic power are used, and the punching of holes in plates is done by powerful hydraulic machines. Drilling is accomplished by pneumatic machinery.

The workmen are highly intelligent, and even those who are employed in the humblest capacity have more practical knowledge of the workings of electricity and electrical apparatus than the average college graduate. Some of the older men who worked as boys in the New York shipyards are now on the pay roll of this big plant, and they will never cease to marvel at the modern inventions which have revolutionized the whole system of shipbuilding.

NOVEL INVENTION FOR TELEGRAPHISTS

But It Makes Individuality of Touch Impossible and Is Not Liked.

THERE is a chance for a psychologist to get good material in studying the effects of a new device that has come into some favor with the telegraph operators of the country. It threatens all kinds of disruptions among the friends who have been accustomed to saying "Hello, Tom," across hundreds of miles of land to men whom they have never seen, but whom they know as well as though they had been chums in person for years. The old telegraph operator will tell you he can read character over the wire, that he can tell whether a man is a "good fellow" whom he would trust or a deceitful one whom he would avoid.

The invention is a sender, which takes away the labor and strain on the wrist that sometimes brings "operators' paralysis." It is adjusted so that when the thumb presses the key back it will register a dash, and when the index finger presses it forward it will make dots until the key is released.

One operator who works in a newspaper office and nightly sends thousands of words over wires which take the news out of New York, bought one of these senders recently. He did not think of the personality in his touch, but only of the saving of labor.

The first night he coupled it up on his wire and set it going at his usual speed. Soon the receiving operator broke in and asked for a few words to be repeated. So it continued for half an hour, the receiver constantly breaking in. Finally there came a sharp break in the middle of a word.

"Who in mischief is sending this stuff?" came a message clicked as angrily as a telegraph wire could carry it.

"Tom," was the reply.

"Well, what in the name of creation is the matter?" came the anxious query.

He was told about the new sender. He agreed to do the best he could with it. At the end of the week his ultimatum came. That key must be abandoned or he would give up his place. "I've heard something about that device of Satan," he sent word. "There's a man up in Massachusetts who went crazy trying 'to get next.' He said he felt like a machine, and that's the way I feel. It's off with that key or me to the woods."

So science has had a setback so far as the use of the new device in one office is concerned. It is only used occasionally when the operator's wrist is tired.

The Arnheim edition will add greatly to your wardrobe and will pay to lay by for next season, as our styles are eight months ahead of most tailors.

It is our Remnant Sale that gives you this rare opportunity of getting a high class Overcoat, satin lined, to order, $20.00; Suit, $17.00; Coat and Vest, $12.50, and Trousers, $4.50.

Our edition must suit or money back.

ARNHEIM,
Broadway & 9th Street.

THE NEW YORK TIMES "All the News That's Fit to Print"

Gives more space to news than any other New York newspaper.

It prints a greater variety of news. It gives impartial news free from bias. It goes into homes that bar other newspapers. It is a sane newspaper, neat in typography, rational in its news treatment, and independent in its opinions. It has refused to appeal to the vicious, the ignorant or the thoughtless.

Special Cable News is one of the most important features of THE NEW YORK TIMES. The London Times's foreign reports appear in this country exclusively in THE NEW YORK TIMES. No other American newspaper excels THE NEW YORK TIMES in the presentation of Domestic Telegraphic News. The Associated Press reports are augmented by hundreds of Special Correspondents.

The Financial Quotation Supplement which accompanies the SUNDAY EDITION of THE NEW YORK TIMES covers all transactions in Stocks, Bonds, and Investment Securities—both listed and unlisted. It includes capitalization of corporations—dividends—date and rate, the fluctuations in quotations for the closing week, the high and low price for both the current year and the year preceding, and other information indispensable to either investor or speculator. The Quotation Supplement is kept on file by all banks and financial institutions for daily reference.

THE NEW YORK TIMES SATURDAY REVIEW OF BOOKS which accompanies the Saturday Edition treats books as news. The leading houses of the country have made THE NEW YORK TIMES SATURDAY REVIEW OF BOOKS their preferred medium for announcements of new publications.

Order Through Your Local Newsdealer,

Punctuality a Thief of Time.

Mr. Max Hecht writes: "On Thursday of last week, at 3:30, the hour fixed for the rehearsal of 'Trial by Jury,' I met Mr. Gilbert at the stage door of the Lyric, and congratulated him on his punctuality. 'Don't,' he replied, 'I have lost more time through being punctual than through anything else.'"—London "M. A. P."

Use of Steel in Building Wagon Ways Is Advocated

Arguments in Support of the Belief That Such Roads Would Be at Same Time Satisfactory and Economical—Benefit to Agriculture.

A RADICAL change in methods of road-making throughout the world appears now to be probable, and it would seem quite time that some change should be made. The whole Christian era, with all its advancement of arts and sciences, has seen no improvement in this particular art. The best stone roads of to-day are no better than the ancient Roman ways or the prehistoric Peruvian roads; not so good, in fact, for, while their surface is the same, their foundations are inferior. It may be said, therefore, that in a concern so vital to the general well-being of the human race as its primary means of communication, the world has practically stood still for twenty centuries. This fact challenges the intelligence of this progressive age, and it is not surprising that the nations are waking up to it, and that some of the talent heretofore employed in the perfection of rail and water ways is now developing itself to the improvement of the common highway.

The demand for better methods is widespread, and the logic of that demand is clear; there is no more reason for running a wagon over stones and dirt than there would be a locomotive, when the same means are available to smooth the way of both. Naturally, therefore, the engineer and inventor take up the application of steel to wagon ways and many experiments are being made in that direction. Germany, which country leads in this field at present, had over fifty miles of steel roads in various forms as to rail and foundation laid in 1901, and these roads are reported as being "in great favor among drivers," while official tests show that from "three to five times as great load" can be moved thereon as with the same effort on a stone pavement.

The desirability of these roads has been questioned, but Spain has had a short steel road in successful operation for ten or twelve years, running from the City of Valencia to its seaport, and, under a travel of 2,200 vehicles daily, careful measurements show only a small fraction of wear in that period, while thin plates laid across a bridge in Canada have stood four times as long under heavy traffic.

STEEL WAYS IN NEW YORK CITY.

Some experiments have been made in the United States on a small scale and with insufficient means, and have resulted in nothing determinate, but upon the recommendation of the writer, and with the co-operation of Mr. Schwab of the United States Steel Corporation, the Automobile Club of America is now making a thorough test of steel ways for various kinds of vehicles. The progress of their good work is indicated in the following letter:

December 20, 1902.

Mr. Jefferson Seligman, Chairman Steel Roads Committee, Automobile Club of America, New York City.

My Dear Mr. Seligman: The vigorous movement for relief from congestion of travel and traffic in this city, in which moment even the State Government is taking an active part, seems to me to make it appropriate for the Automobile Club of America to contribute any practical suggestion in this regard which can be drawn from the experience of its members.

The steel roadway in Murray Street, the first practical essay of the club in the improvement of street conditions, has been favorably received and is producing results relevant to the excellence of its method. Many drivers, not informed of its character, still avoid the steel plates, thinking the way easier using electric or other small vehicles, which seem to them perfectly perfect. The time is ripe, therefore, to consider the question where and how the method can be applied in the city, having in view the three great objects to be attained—first, the relief of traffic congestion; second, the speed of carriage travel, and third, the clearance of way for the street cars.

Planned for a four-story city, New York is having its buildings run to three or four times that height, without any increase of the street surface. Increased facilities must, therefore, be provided above and beneath the surface. But this will take time and money, and the first effort must be to make the surface do its utmost in accommodating travel.

This requires a separation of the various classes of travel which now impede each other, separation which is necessarily voluntary, since it cannot be enforced without great friction.

North and south bound trucking originates mainly on or near the water front and would have place in the best possible system if there were provided for it there. Our smooth metal plates, with a roughened horse path between, and the plates suitably indented to prevent slipping on grades, will be perfectly adapted to this purpose. Their cost is not great, and their loading is not more than the wear of pavement, vehicles and animals must be embrocated. These ways could be laid in the new Elm Street for a cross-town line and on avenues near the river for side lines, replacing there, perhaps, some of the unused or less profitable car tracks. Single cross-town lines could be laid occasionally, with an equal right of way in one direction.

The immediate effect of this improvement would be to increase the speed, the loads, and the revenues of freight vehicles and yet lessen the cost of their traction. A similar effort would be to remove these vehicles from the car tracks and the carriage streets. The principal car lines, which are now cut down from their normal speed of about eight miles per hour to an average of two or four miles in rush hours, and which by adding more and more cars have only added to the congestion and actually reduced the capacity of their services, would be able to do vastly more business at a profit, while at the same time the carriage and motor travel could correspondingly increase both in volume and speed.

It would hardly be too much to say that the gains to all would be thus doubled, while the relief from delays, annoyance, and general vexation of spirit attending the present conditions would be a boon to the public inestimable in money. It is for these reasons that I feel it my duty to present with the committee in bringing the matter to the attention of the city authorities if it is decided to take such action. Very truly yours,

ROY STONE.

The Murray Street line is formed of parallel twelve-inch plates, four and a half feet apart, with downward flanges resting on broken stone, and very slightly raised edges as guides for the wheels; the stone pavement is laid a little higher than these guides, and about an inch above the general surface of the plates, but sloping toward them, so that wagons drift naturally into the wheelway, but turn out of it without any difficulty.

This specimen road is already attracting much official attention. The Highway Department of the city is considering its application to various lines where heavy trucking exists, or where it could be drawn from other streets to the relief of streets and avenues now congested. The Dock Department engineers are hoping to get it on some of the piers where the traffic soon destroys the planking, and possibly on West Street, where there is still much congestion. The State Engineer wants a steel road from the Ulster slate quarries to the Hudson River to carry the ten-ton loads which now ruin every other kind of road there.

The United States Government, through the Road Bureau, is asking to have steel for a road in the District of Columbia. Commissioner Budd of New Jersey favors a steel road across the Hackensack Meadows and over the sea comes an inquiry from the Department of Public Works of London.

SPECIAL ROADS FOR AUTOMOBILES.

Whenever and wherever it becomes possible to build roads exclusively for motor vehicles and bicycles the ideal construction might be a wheelway like that in Murray Street, but without guides and with indentations in the plates laid on heavy grade to prevent the slipping of wheels in wet weather—the roadbed graded nearly with no ditches and only shallow paved gutters, and with the space between and outside of the plates all well laid down in grass.

On such a road there will be no dust to rise, no glare from sunlight, no reflected heat, while the road itself will suffer no injury from rain and no wear of any kind and if it is bordered with hedges and without trees, no serious accident would be possible to any motor at its highest speed. It will be like driving over a fine lawn, except that the power required will be almost nil.

The increase of motor cars will increase the demand for special roads, and in turn such roads will increase the demand for motors. These vehicles requiring only a low head-room, their roads can easily pass under the highways.

The vicinity of New York will be the natural place to inaugurate such roads, and fortunately there are peculiarly favorable locations for them there.

To the eastward a line could be laid along the crest or upper slopes of the great terminal moraine which forms the backbone of Long Island. On this route there are few crossroads, and they occupy depressions in the ridge where they can be easily bridged.

Northwest and southwest lines across the Jersey meadows will give access to the great stone road system of that State. On the northeast, lines from the Hudson Highlands and Connecticut hills could meet the great Northern Boulevard of New York, which is already planned to give an exclusive space for automobiles.

But the finest route of all, and the finest in the world, would be under the cliff of the Palisades out to the mountains of Rockland County. On this route for over twenty miles no crossroad is ever possible, and for the most part scarcely a living creature exists to be endangered, while throughout its whole length it will be sheltered and warm in Winter mornings as the sunny side of a house, and yet cool in Summer afternoons under the "shadow of a great rock."

These special roads would benefit every interest concerned, both public and private; they would extend the suburban limits of the city and develop new residence districts of the highest class, and they would largely relieve the public roads of motor travel, while adding to the usefulness and popularity of motor vehicles by freeing them from a speed limit on a good stretch of distance. The first cost of these roads might be heavy, but that of maintenance would be trifling, while the saving in wear and tear of vehicles would be immense.

PUBLIC ROADS.

For steel roads in country districts a single track will usually be sufficient, and with a lighter and narrower rail, the total weight about 100 tons per mile; the rails to rest on foundations of stone, gravel, or burned clay, and between the rails a few inches of gravel for the horse path.

Outside the grass will grow up to the rails and the turf will be firm enough for light vehicles to turn out upon, and for such heavy ones as go contrary to the current of traffic, while it will save the road from wash and wear. On many of the older stone roads all but a narrow wagon track is covered with strong grass which has grown up in the hard macadam.

AMERICAN ROAD IMPROVEMENT.

Authorities on commerce and production all agree upon the vital need of common road improvement in the United States. The Chamber of Commerce of New York says: "We are handicapped in all the markets of the world by a needless waste of labor in the primary transportation of our products, which goes far to offset our great advantages in other respects."

The Department of Agriculture at Washington, through its 10,000 regular correspondents, has gathered statistics of the cost of hauling on country roads, with estimates of distances and quantities moved, and has computed the total expended at $900,000,000 annually, of which it considers two-thirds chargeable to bad roads—the average rate per ton per mile being 25 cents, against a rate of 8 cents in most parts of Europe. It is true that this most incredible tax has not been unbearable while we were "skimming the cream of a new continent," but it is so now in many sections, and must become so generally. It is already keeping in hopeless poverty great regions where the soil is worn or wearing out.

WAYS AND MEANS.

No one doubts that good roads would pay—but how to get them is the question. It is the special weakness of our system of government that we cannot compel a great sacrifice to secure future benefit. People who govern themselves will not apparently tax themselves to build the roads which they know they need, nor will they generally consent to borrow the money and tax their children's children to pay it, although they could hand down to them not only the roads themselves, but the savings of generations in their use. Good roads must therefore be built, if built at all, without any decided increase in present taxation and without imposing a burdensome debt upon the future. This situation might seem to be an absolute impasse, but there are ways out of it, and the successful adoption of steel for general road construction will help to open a way. It will practically eliminate for a generation at least the question of maintenance, which in stone roads is most serious, and will leave only the first cost to be provided for, while it will bring in a new and powerful interest, accustomed to "high finance" to help devise the ways and means for that first cost.

THE PRICE OF STEEL.

In estimating the cost of the metal for roads it will not be necessary to take the present boom prices, not even the probable average for a term of years; advantage can be taken of dull times, since public funds can be raised as well then as ever, and the steel producers would rather have this new demand come in such times, at low prices, to help them hold their labor, than to have it at high prices in flush times when they are overcrowded with work. In a depressed period, moreover, broad-minded producers will naturally make lower rates for this use of steel than for any others, if a general movement for the purpose can be inaugurated, knowing that such a movement would do more than anything else possible to revive industry, hope, and prosperity.

In view of these considerations, therefore, we may safely take the bottom prices of the last depression, say $18 per ton, as the governing rate for road metal, especially as it was understood that that price still paid a profit to those concerns which were best equipped and managed, and as since then the expenses of mining, transportation, and manufacture have been further reduced. The cost of the metal and the railroad freight are all that need be counted as cash required to build country steel roads; the hauling and laying of the plates and the foundation of field stones, gravel, or burned clay are all matters of common labor and can be provided for by contribution of labor or a labor tax.

Instead of the direct aid to road building now strongly advocated in Congress and elsewhere the United States could give more efficient aid indirectly, and give it through such means as would, moreover, secure most important benefits to the whole country in addition to good roads.

Two thousand dollars a mile is cheap enough for a perfect road, good for a generation without repair, and if the money could be borrowed, for instance, at the lowest rate which is paid by the United States Government—2 per cent. per annum—the yearly interest charge per mile would be only $40, or just what it costs to keep up the earth roads of New York State, counting labor at $1.50 per day. But to get the money in vast amounts at that rate is the problem, and there is where one of the special features of metal roads construction comes in.

In stone roads there is nothing worth removing, nothing that can be pledged as security for a loan; but steel rails and their attachments will afford a substantial and available pledge; adding this pledge to the credit of a county should make the county road bonds a peculiarly safe investment. No county would ever permit its roads to be stripped of their metal by default in its interest. Moreover, improved roads of any kind increase property values many times their cost, and road bonds may thus be said always to multiply their own security.

IMPROVED AGRICULTURE.

The interest charge with a small sinking fund to provide new metal when the old is worn out would amount to but little more than the present average road tax, while it would be less than the cost of keeping up stone roads under any considerable travel. But even should the tax be slightly increased, it will be more easily borne by the farmers than the present road tax, for new roads will bring a new agriculture. Whenever the local fertilizers which abound in the country, such as lime, plaster, marl, muck, and mold, together with the refuse of towns and the many commercial manures now available, can be hauled to the farms, in big loads, any day in the year, the restoration of our soils will begin, and it will advance beyond calculation when every good water power in the farming districts is employed, as Niagara is already, in converting the nitrogen of the air into a solid form, so that the great staple of fertility becomes cheap and inexhaustible, as well as easy of distribution.

Not many years of the steel roads era can elapse before the average wheat crop of the United States will come up to that of England—29 bushels per acre, instead of 12 or 13—and our other crops increase in proportion and our depreciated farms will come back to their former value or above it.

ROY STONE.

HOTEL KEEPERS MAY RAISE PRICES

Increased Expenses Cause Talk of Necessity of Charging Higher Rates.

THE MEN who live in hotels may wake up some morning before long to hear that they must pay about a third more than they have been paying or else seek other quarters. According to many of the proprietors, the time is bound to come, and that very soon, when a raise in rates will be absolutely unavoidable. The only thing which has kept them down thus far is the competition between the numerous hotels in the city. So close is this, say those who run the hotels, that the least change for the worse in the accommodations or the least rise in rates at any hotel will drive all the customers from it to another that has kept its same rates.

Notwithstanding this fierce competition, the proprietors say that it will not be long before some one will have to start the rise in price. The present state of affairs seems to be that each one is afraid to make his rates higher for fear that the others will keep theirs down to the present level and thereby attract his patrons. None of them deny that they would be delighted to announce a rise, if they were sure all the others would do so at the same time.

The proprietors agree that never before in the history of the city were the expenses of running a hotel so high as they are at present. While the high price of coal causes as much grief to the hotel keepers as to others, this is by no means the only one of their troubles. Everything, they say, seems to go up at once. And to culminate all their troubles comes the additional burden of having their property assessed at its full value. F. A. Reed, one of the proprietors of the Park Avenue Hotel, says that he does not see how the rates can long stay as low as they now are.

"But it's got to come some time soon," he says, "because it will soon reach a point when the hotels will no longer be able to pay reasonable profits. As long as everything has gone up so high, the hotel men will be obliged to make the guests help pay for it."

The proprietor of the Hotel St. Denis, when asked his opinion as to the probability of the rates being raised, stated that the price of beef alone is such as to warrant all the hotels charging higher prices.

"I don't see how it can go on this way," he said. "The coal for this hotel is something appalling. Not only that, but all provisions have gone up lately, and service is, for some reason, higher than usual. And, as if the prices had not done enough to increase the expense of running a hotel, the taxes must almost double themselves. I feel like saying 'What next?'"

The kind of hotel and the location are important factors in this matter. There are some houses that charge enough at all times to cover any exceptional rise in the price of provisions. And if the other class, which run with less profits, so that their low prices may attract patrons, announce a rise in rates, then everybody will flock to the others, thinking that if they must pay high rates they might as well go to the places that are considered "swell."

When asked whether or not concerted action had been thought of in order to effect a rise in rates, several of the proprietors said that nothing like that has yet been proposed. They pointed out that it would be a difficult matter to come to any agreement about such a rise on account of the various grades of hotels. Many of the most expensive would not be willing to make any change at all because their rates are already so high. On the other hand, there are small hotels that prefer to make a very small profit on each guest and attract large crowds rather than to run the risk of losing patronage by raising the rates.

Co-operative Buying.

"THE 'little fellow' does not have to go out of business because of the competition of big stores," said a salesman in a Broadway wholesale house the other day. "Of course, the man who places a big order with us can get terms which we can not give on a small lot, but the small dealers combine among themselves, and by co-operative buying get the same terms as their big rivals. I just sold enough shirts to an east side men's furnisher to fill every cubic foot of space in his store. He was probably buying for a dozen storekeepers at once. Another one of the dozen will buy neckwear for all the stores; another will purchase all the collars and cuffs, and so each of these stores will be stocked with goods at the same terms as the big stores, and without paying any commissions to buyers, the proprietors doing the buying themselves. There are scores of these little combines of shopkeepers for the purpose of co-operative buying, and this is how they survive the competition of the big department stores."

DANCERS WHO PLEASE BOWERY

Poetry of Motion Appreciated by East Side Theatregoers.

IF any one imagines that ballet on the Bowery is a neglected art, a peep into the places of amusement on that classic thoroughfare will bring about a change of opinion. "Queens of Burlesque" are as plentiful there as plain citizens on Broadway, and the members of the corps de ballet could give a point or two in the matter of grace and skill to the dancers in more pretentious localities.

"The Ballet of Nations" was recently featured as the star attraction in one of the Bowery music halls. The members of the ballet were styled on the bills "pearls from every land under the sun," and judging by the hit they made, the audience must have decided that there were beautiful gems among them. Their entrance was heralded by a flourish of wind instruments and the rub-a-dub-dub of drums, and when they marched across the stage in rhythmic unison the occupants of orchestra chairs and gallery benches applauded rapturously.

Each battalion carried the flag of the nation it represented, and spectators of corresponding nationalities gave a rousing welcome to their particular colors. But when the Stars and Stripes appeared, everybody, irrespective of race or color, joined in a long, loud cheer.

The intricacies and evolutions of the ballet were well executed, and the kaleidoscopic effect of the twirling draperies was a feast to the eye. By way of grand finale a series of tableaux were shown. The first represented Eve leaning against a wobbly apple tree and looking rather chilly; next came the Three Graces Aglaia, wearing a bored expression, a diamond necklace, and a few other trifles; Thalia chewing gum, and Euphrosyne giggling loudly.

The curtain fell; then rose again on a new ballet, but even the gyrations of supple "Egeria" grew monotonous, and the advent of a solo dancer was hailed with joy. She was a saintly little creature with a flowerlike face. The usual fixed grin did not disfigure her pretty mouth, and her eyes were veiled by bewitchingly long lashes. Instead of the regulation ballet costume she was attired in black, accordion-pleated skirts, reaching to her ankles. One marveled as to how so demure a maid drifted into a Bowery theatre.

The orchestra played a soft, dreamy melody, and her feet kept time to the sedate measure. The lissome figure swayed and postured gracefully, and even when the music became louder and faster, fast quick-eared movements had no bouncing, acrobatic feature about them. The spontaneous burst of applause that rewarded her efforts proved that a Bowery audience recognizes the poetry of motion and discriminates as unerringly as a Fifth Avenue assemblage. It refused to be charmed by "The Ballet of the Water Nymphs," which succeeded the little dancer. It guyed the young things in the first row and made impolite comments on their grandmothers in the rear. At length it rose as one man and howled for the atom of femininity in the black skirts, and until she returned to the centre of the stage peace was not restored.

The "Water Nymphs" looked hurt, and their sea-green costumes took on a deeper shade from sheer envy, but there was nothing to do save grin and bear it, because the Bowery gallery god is omnipotent, and when he pays his money he insists on taking his choice, particularly in the matter of dancing, on which he is an authority.

DIRECTING "AERIAL BALLET"

Herr Zschiegner Describes the Method by Which the "Human Birds" Are Made to Fly in Big Theatrical Spectacles—Inventor's Interesting Career.

THE human birds that wing their graceful flight through space at the Knickerbocker Theatre during the scenes of the new spectacle "Blue Beard" cause as much comment now as they did a year ago, when New York first saw them in "The Sleeping Beauty and the Beast." It is quite evident to any one who watches the audiences during the progress of this act that the Grigolattis to many are still as much of a mystery as ever, and to those who have seen them before quite as pleasing a feature of the big spectacle. It will probably surprise many to know that March 19 next will mark the twentieth anniversary of the introduction of the "aerial ballet," as it is technically called. Of course, in that time the original idea has been much improved upon, and the most surprising feature of the present exhibition given by the Grigolattis—the flight of one of their number over the heads of the audience, scattering flowers as she goes—is a distinct novelty.

The introduction of this idea is an illustration of the ingenuity of Herr Friedrich Zschiegner, the inventor of the ballet. When preparation for the new spectacle was under way at Drury Lane, the director of the house, Arthur Collins, went to Herr Zschiegner in great trouble.

"We're so crowded," he said, "that it will be impossible to make room on the stage for the flying ballet. We will pay you, according to our contract, but the act will have to be omitted."

Herr Zschiegner was not nonplussed. "I do not want to be paid for my act unless it is used," he replied. "If you can't give me room on the stage I'll do it out in the audience."

Mr. Collins laughed, but agreed to allow the inventor a trial on lines that he suggested. That the experiment was a success spectators of "Blue Beard" at the Knickerbocker will probably be as ready to attest as were those who saw the act at Drury Lane.

Herr Zschiegner is a short, stockily built man, with a face not unlike the pictures of Bismarck. And when one hears the story of his life as it falls from his lips the impression of the strength of character of the man is heightened. For the inventor has had an eventful career, both before and since he became the inventor of this method of aerial navigation.

Twice a prisoner in Russia, royal artist by command of the Emperor, the wearer of the Order of St. Catherine and half a dozen other Orders, the manager of three aviaries of human birds, director of two theatres, and employer of some three or four hundred people in varying branches of theatrical enterprises, Herr Zschiegner points with pardonable pride to his accomplishment, and smiles at the thought of the way he began his life's career. He has traveled all over the civilized world, and speaks half a dozen languages. His English, though occasionally marked by the use of an idiom that gives a quaint touch to what he has to say, is generally correct.

When the reporter called he was breakfasting at the Belvedere Hotel, having returned the night before from Washington, where one of his flocks of birds is appearing in "The Sleeping Beauty and the Beast." His presence in this country now is due to the fact that he wanted personally to supervise at the Knickerbocker the flight of the "bird" who scatters flowers into the audience in "Blue Beard."

"I was born in Potsdam," said Herr Zschiegner, "where my father was physician to King William IV. He is still living, now a man of eighty-eight. When I was little more than a boy my father married a second time, and not finding things congenial at home I started out to make my own way in the world. This was in 1870, at the time of the Franco-Prussian war. I got a position in a delicatessen shop, and for weeks my work consisted of grinding coffee all day long for the use of the troops.

"But I soon saw that the life of a merchant was not for me. I must live at that time from the pocket of my father, but one day, when he told me that he did not think I wanted to work, I felt that it was time to do something else. I apprenticed myself to a house painter. There my artistic proclivities had an outlet in putting on the first coats of paint. It was an awful struggle. I earned as much as 50 cents a day. Living was high, and for five months I subsisted on the not delicate fare of horse meat. At the end of a year I nearly died from lead poisoning. That ended my career as a painter. I became an actor.

"One day at the Victoria Theatre, in Berlin, during the rehearsal of a pantomime, it was found necessary to have a flying woman. Some old machinery was rigged up and a woman made the attempt. She got half way up into the air when there was a fearful creaking, the machinery refused to act, and the poor lady was left hanging in midair, her feet and arms spinning in every direction.

"'Cut it out,' yelled the manager, and after the performer had been taken down the antediluvian machinery was loaded on a wagon and carried out for junk. That little incident gave me an idea. For two years I labored on it, and then applied the results of my thought and experience. I made the first experiment with my young wife, Frau Grigolatti, who had been a ballet dancer at the Grand Opera House in Berlin. I had intended originally merely to perfect my paraphernalia and then sell it, but when I discovered how successful it was I determined to hold on to it myself. As a result of that little accident at the Victoria Theatre I am to-day a rich man. I have my own villa and a yacht. I direct two companies, the one at the Apollo Theatre in Berlin and the Reichshalle in Cologne.

EXPERIENCES IN RUSSIA.

"I had some curious experiences in Russia," Herr Zschiegner continued. "In the Grigolattis act as I first introduced it I used live pigeons to heighten the effect. On my way over from Germany I met the German Consul on shipboard. 'You must not take your pigeons into Russia,' he said.

"When I inquired why, he informed me that pigeons were barred from entering the Czar's domains, because it was feared that the birds might be carriers used to send out information collected by spies. But I thought I would take a chance. When we landed a gold-laced official approached me, whom I afterward learned was the Director of Customs. I had traveled before. I knew something. I dropped a piece of money in his hands. So he make both eyes come closed, and I bring in my pigeons.

"But much to my surprise on the day I was to leave they placed me under arrest. Inquiries were instituted and I was put in prison. I must say it was a nice prison, and I was well treated. They sent a man, who had to remain and watch my pigeons until the next steamer sailed. Day and night he had to guard those innocent birds. And finally, in company with a guard of soldiers, he brought the pigeons on board the ship, remained until the moment we sailed, and never took his eyes from the birds in all that time.

"On my next visit to Russia, Alexander III. requested a view of the aerial flight in his private theatre at Krassoe Selo, near St. Petersburg. I got my pigeons through this time by inclosing them in hollow tubes that looked like harmless pieces of my mechanical contrivance. When I arrived at the theatre I found that every one employed in the place—stage hands, mechanics, and all—were soldiers. The utmost rigor was maintained. There was a suspicion that somewhere about my person I had a bomb concealed.

"I went into the Emperor's box the afternoon before the performance to tell my men how to regulate the lights so that the wires would not be visible to the royal party. I had hardly got there when half a dozen soldiers jumped into the box, grabbed me by the neck, and forcibly ejected me. They kept me locked up until 8 o'clock, when I was brought to the theatre under guard and allowed to superintend the act. After the performance the Czar came back on the stage, complimented me, and made me his Royal Artist."

HOW IT IS DONE.

The method by which the flight of the human birds is managed is ingenious and interesting. When they descend from their dressing rooms to the stage of the Knickerbocker all eyes—from those of the chorus girl to those of the stage mechanic—are fixed upon them. The downy corsage which each wears conceals a Greek corset of leather and iron, which encases the entire body. At the top of the back is an iron hook.

The women pause in the wings at either side of the stage while an attendant fastens to each corset hook an invisible wire suspended from the top of the flies. The wire is fastened in turn to a strong rope manipulated by a German youth, who has been trained with as much care as the dancer, for the movements of the latter, if not her very life, are in his keeping. It requires from one to three men to manipulate the wires for each woman.

At the signal the première floats into the centre of the stage, with a graceful undulating motion, suggestive of a bird in flight, and the remainder of the bevy follow. By touching a button at the waist the dancer can detach the invisible wire, and on the big Drury Lane stage each dancer can give her independent signals. Here the director is obliged to do all the signaling.

The men at the ropes are no unimportant factors in the results. A deviation of an inch in the raising or lowering of the wires would cause the dancer to come down with a thud, destroying the illusion and possibly resulting in painful accidents. The sense of touch is the only guide the men have in managing the ropes.

Herr Zschiegner says that it is almost impossible to find men in this country who can do the work. He attributes the excellence of his German assistants to their military training, with their absolute willingness to obey orders promptly, and also thinks they have a natural and intuitive feeling for rhythm. Nothing is left to chance. Every movement the dancer makes, every spot she is in touch, is defined with mathematical precision.

The results are attained only by constant and arduous practice. Despite years of training each member of the flying ballet must rehearse at least four times a week, the work lasting from one to two hours. Without the inspiration of light music or applause the dancers go through their evolutions while the director stands by making suggestions and studying every detail of the act anew at each rehearsal.

ANDREW CARNEGIE'S ENGLISH BILLIARD TABLE A RARITY

Only Two Others of Large Size Variety in New York—Englishmen in the United States Prefer American Carom Game When They Have Learned to Play It.

ONE of the recent innovations in Andrew Carnegie's new home at Ninety-third Street and Fifth Avenue is an English billiard table which he has had made to order in this city for $1,500. There is a very fine billiard room in Mr. Carnegie's house, better, it is said, than in any other home of the long row of multi-millionaires' palaces that line the avenue. It would hold two of the ordinary carom tables such as are used in the United States, but the huge English affair, built on lines that have been in vogue since the days of Henry VIII., almost fills it.

So far as a reporter for THE NEW YORK TIMES could find out, there are only two other English tables in this city—one at the Waldorf-Astoria and the other in a little club that is very much patronized by Englishmen. The one at the Waldorf-Astoria is patronized almost exclusively by English guests of the hotel, and has not yet ceased to be an object of amusement and curiosity to American visitors. The Englishman, on the other hand, dislikes the American table. He calls it a toy.

Before Maurice Daly, one-time billiard champion of the world, sailed for Europe last Wednesday to witness the international tournament in Paris next month and to arrange for a similar tournament in this city, a reporter talked with him about Mr. Carnegie's English table. Mr. Daly is one of the pioneer professional billiard players in New York, and has an unequaled library on the history and science of the game. He has a scrapbook with reports of all the important professional and amateur games ever played here, from the days when professional matches were confined to a little hall in Chambers Street and gradually worked their way up town to the old Winter Garden, to Tammany Hall and Irving Hall. In those days billiards was not a very popular game in New York, and it was difficult to find a place for a professional match. Nowadays there are, according to Mr. Daly's estimate, 500,000 men in New York who are regular habitues of the billiard table. Matchmakers can take their choice of three large public billiard establishments, or, if they wish to be exclusive, can measure cues in the commodious billiard rooms of clubs that give more or less attention to sport.

WHO WILL PLAY WITH HIM.

"I wonder whom Mr. Carnegie will find to play with him on his English table," said Mr. Daly. "I have heard that he is very fond of the English game, and has a fine billiard room at his place in Skibo. Over there he can find plenty of company. But here it is different. Unless he means to keep open house for English visitors, I tried an English table once in my billiard hall. I had to take it out. No one ever played on it, and my patrons said that the cumbersome old thing was in the way. When Englishmen take the trouble to learn the American game on carom tables they take just as much fun at their bulky, old-fashioned pocket tables as Americans do.

"We must make allowance for conservatism. Englishmen were playing the game they play now before the Pilgrims landed on Plymouth Rock. A good billiard table never wears out, you may say, and there are old country houses in England where the same table and the same game played under the same time-honored rules has been played for generations.

"Billiard tables in American homes are comparatively new, and even now one finds them only in the homes of the rich. But in England the billiard room was as much a part of the country gentleman's home as the butler's pantry. What would the writers of English fiction have done without the billiard room, I wonder? It is as much a part of romance and the shelter of blushing maidens as the poor old conservatory that leads from the ball room.

"An American who knows the three-cushion game can get along on an English table, what he wants to, but its like playing golf with a walking stick. While in England he can find American tables in the larger hotels of London, but in few other places. In Paris the tables are similar to ours, and our rules of the game conform very closely to theirs. Frenchmen are fond of billiards. Next to the United States, France has done more than any other country for the advancement of the game, both among professionals and amateurs.

BILLIARDS FOR WOMEN.

"In France a gentleman is not ashamed to take his wife to see a professional billiard game. French women are good billiard players, and like to see all the fancy shots made by professionals as soon as they begin to attract attention. They read the billiard news in the daily papers and subscribe to journals published especially for billiardists. According to Shakespeare women have played billiards from the time of Cleopatra. In 50 B. C. he makes the Egyptian Queen summon Charmian to billiards. Mary Queen of Scots was passionately fond of the game. On the evening preceding her execution she wrote to the Archbishop of Glasgow that 'her billiard table had been taken away from her as a preliminary step to her punishment.' The Empress Josephine used to rouse Napoleon from his gloomy moods by a game of billiards. Adelina Patti became disgusted with her English table and has one made in this city, for which she paid $2,500, to take to her castle in Wales.

"There are many clever women billiard players in New York, but they are never seen at the professional matches, and seldom at the amateur contests. I believe that at the Hamaker Club, in Brooklyn, and at the Liederkranz, in this city, women are invited and encouraged to see the contests of National clubs. That is a move in the right direction. In the old Windsor Hotel, where the billiard room was right off the corridor, Patti used to stand at the entrance and watch the play for a few moments before going to her room. She never would accept a seat inside. Because some men who had more money than manners used to stand in groups and stare at her. Mrs. George Gould is a capital billiard player. So are Mrs. Almeric Paget, Mrs. Burke-Roche, Mrs. Edwin Gould, and a number of other society women. Lillian Russell can play pinnet as well as a professional. I believe she takes to the game as a part of her daily exercise to trim down her weight and keep in good condition.

"The efficacy of billiards as a health restorer is beyond dispute. The motions gone through with reach every part of the body, and operate on the entire system. They completely dispel languor and that tired feeling. The tension of the muscles is tested, and the blood sent in swifter circulation through the veins.

AMERICANS BEST AMATEURS.

"Americans are the best amateur billiardists in the world. For many years Wayman McCreary, Internal Revenue Collector at St. Louis, was the champion amateur of the United States. He did as much as any professional to make the three-cushion game popular. Travelers used to stop off to see his brilliant plays. The papers published columns about him when he defeated Byron Gillette or Cincinnati, a man who in exhibition play had beaten both Frank C. Ives and Jacob Schaefer. It is not generally known that Ives's superiority as a billiardist was due to the fact that he was born left-handed. He won many a game by a left-handed shot that other men would have lost by being compelled to use the bridge.

"In giving lessons to young men and women in New York, and probably elsewhere, professionals teach them to use both hands from the start and to avoid the bridge. Any person in an average billiard room can tell the self-taught billiard player from one who has learned the game under an instructor. Billiards, of all games, is the most difficult to learn. In fact, the game has never been mastered. There is a great scarcity of good players. Minor professionals find profitable employment in giving lessons. So do some markers in the big establishments, who play a capital game, understand the rules, and have ample leisure in the mornings and afternoons. Young players who pick up the game contract awkward habits and contortions of the body that not only deprive the game of its grace, but injure their health. They do not stand erect. They swing the body like a pendulum and waste motion.

"Confidence, a splendid eye, and a pliable wrist are the stock in trade of a good billiard player. Some men get nervous the moment they touch a cue and make the most ridiculous shots. I know one man whose business is adjusting the delicate works of the finest watches who goes all to pieces the moment he makes a bad shot—and he certainly makes some of the worst I ever saw. He knows the science of the game from A to Z, but he cannot make his points. Even professionals and skilled amateurs cannot always make the shot they intend to, any more than a baseball pitcher can always get the ball over the plate. He knows the move, but he can't make it. The best professionals have had but few shots shown to them. Each has picked up some points from the other. Great power of observation has carried them to the front rank.

BILLIARDS IN NEW YORK.

"When I began billiards in New York everything was below Fourteenth Street. To be sure, there is a great deal of playing done down town now, but nothing compared to the patronage of the up-town resorts in the evening. The men who play down town in the daytime, I imagine, are residents of the suburbs who seldom get a chance to play in the evening, and others who are masters of their own time and can take an hour or two off if they choose.

"New Yorkers play what is called 'quick' billiards. They move around rapidly and don't waste time worrying over shots. An observer in a billiard saloon can easily pick out a man from the West or South from the slow manner in which he gets about and the long time he poses over his cue before he makes a shot. This is very wearisome to a quick player. Some men cannot play well unless they have a cigar in their mouth. Others neither smoke themselves nor get into a game with any man who smokes. Some men, even professionals, never play without nerving themselves up with stimulants. The majority of men, to my knowledge, never touch a drink of liquor while they are playing, although they sometimes take a nip after the game. Some billiard players never play until they take off their coats. There is no advantage in this. It is merely a habit. The best amateur players I know play with their coats on. There are many other peculiarities that it is not necessary to mention.

"Scores of persons go to the billiard halls night after night who never played a game in their lives. But they know the principles of it, and enjoy watching a good game better than they would a book or the theatre. There is a physician in West Thirteenth Street who says that it soothes him to run into my place for an hour every night and watch the players.

"Good amateurs never talk much while the game is going on. They are as silent as men over a chess board. Noisy players who 'guy' one another's bad shots, roar over bad puns, and behave in a way to disturb the enjoyment of the other players are not encouraged. The floor manager seldom goes to the extreme of asking them to leave, but they have great difficulty in finding vacant tables after the first visit. A 'reserved' card is on every vacant table before they know it. Oh, yes, it is a common thing for a party of men who want an entire evening at billiards to call up by telephone and reserve a table. We hold it until 8 o'clock.

EXPENSIVE BILLIARD TABLES.

At the Brunswick-Balke-Collender Company the reporter was told that the price paid by Mr. Carnegie was not unusual for a billiard table. A good table, full size, that will stand on the floor as firmly as though it was built upon a rock, costs about $400. The very best does not cost more than $600. These are the sort that professionals use. The principal cost is the slate bed and the rubber cushions. But it is the same with billiard tables as with pianos. Double and treble the cost of the table is spent in ornamentation. Very frequently the architect orders the table made of a certain wood or shape, to conform to the general decoration of the room. Extra work of this sort costs money. This firm made the Patti table, and the extra cost was for inlaid porcelain tablets, on which were painted scenes commemorative of her American visits.

George Gould has two very handsome billiard tables, one at his city home and the other at Georgian Court. W. C. Whitney has one or more in each of his houses. J. Pierpont Morgan has American tables both in his New York and London houses. To increase the list would be to mention nearly every rich man in New York. If he does not play himself, he buys one for his family or for his guests. Its up-to-date house the architect plans for the billiard room as naturally as he does for the dining room. An apartment 15 by 20 feet is the correct thing.

Sending Aid to Finland.

THOUSANDS of dollars go from this country on almost every boat sailing from New York to aid the famine-stricken people of Finland. Throughout the Northwest States in particular, where most of the Finns who have emigrated to this country have established colonies, the work of securing these funds is going on with remarkable activity. The Finns, however, are not many, comparatively speaking, and most of them are poor folk, farmers and laborers, and a large part of the money raised to succor their famished countrymen is being raised by native Americans, and people who came from other of the northern countries of Europe. The city has contributed largely, principally through churches and civic societies.

EDUCATION IN PHILIPPINES

Problems Which Have to be Met by Those Who Instruct a Malay People—Policy and Methods of Those at the Head of the Department of Education.

BY DUDLEY O. McGOVNEY,
Instructor in History, Central Normal School, Manila.

THE educational work which the United States has set out to do in the Philippines is new to the world. No adequate attempt has ever been made to educate a Malay people. The noteworthy efforts of Siam, however significant as an attempt of an Oriental people at self-development, do not constitute an example, inasmuch as they aim at the maintenance of Malay political and social customs and the vernacular. The covert smiles of the foreign press and their gentle asides that the United States has much to learn about dealing with dependent peoples, and especially their tendency to regard American educational aims in the Philippines as chimerical, far from discouraging the efforts of the United States, as they do not, ought to lie uneasily upon the consciences of colonizing powers because they voice the pessimism of inadequate effort or simply no effort at all. Especially is this true when we consider the tremendous fact that no adequate effort has ever been made by any power to modernize a backward and dependent people.

That this is a fact none will deny. It will merely be asked, "Will any attempt be adequate?" For the determination of this question in the affirmative we have no sufficient data. Neither are there any data for a negative answer. A frank admission on both sides shows that there is no ground for discouraging comment, and, on the other hand, that the United States is meeting an unsolved problem with more efficient and more ably handled methods than the world has ever had at its disposal before.

So, while the United States may say that in such a large question of duty to humanity it is better to have tried greatly and failed, there is no necessity for such advance apologies. American educational aims and methods and their results have at recurring periods caused surprise to the foreign observer, and as much so in the past year as ever before. The increasing success of schools for the American negro encourages us in the belief that American education is equal to the task of race development. The results of our brief labors in the Philippines are also reassuring. The brightness of the Filipino and his quickness to learn are marked. The shortness of the time would make any estimate of results absurd. The time-worn dictum of the Orientalists is, of course, that his early precocity does not extend to maturity nor lead to sound and well-balanced mental ability in the adult; that not only early diminishing returns, but relapse and recurrence of the old mental and social life take the heart out of optimism.

Yet we may set off against this the similar results in all countries, including the United States, under the old methods, especially in dealing with the backward elements of population. Real live stimulation of mental life and growth, closely co-ordinated with common life about, taking hold of the body and its daily habits and developing its powers, is the education that is too comparatively new to say what its effect will be. The Filipinos have made considerable progress under the routine, "a-b-k-learning" régime of Spanish times.

THE RETIRING OFFICIALS.

The resignations of Commissioner and Secretary of Public Instruction Bernard Moses and of Dr. Fred W. Atkinson, Superintendent of Education, both to take effect Jan. 1, 1903, vacate the administrative offices of education in the Philippines. His urgent recall to Berkeley, to reassume the headship of the General Department of History, Economics, and Social Science was the motive for Prof. Moses's resignation. His intimate acquaintance with Spanish-ruled peoples and his history-bred largeness of view made him distinctly the member of the commission, and his withdrawal was regarded with regret by his associates. The retiring Superintendent, Dr. Atkinson, entered upon his work about two years ago with great enthusiasm, and throughout his whole soul has been in it.

The principal features of the policy of the outgoing administration as it found expression in the established system may be briefly outlined. Nearly a thousand college and university graduates were brought out from the United States, the majority arriving in the middle and latter months of 1901. These were distributed to nearly all parts of the islands. They were instructed to establish primary schools, nominally under native Principals, who should have charge of the discipline and reports. They were also instructed that this was by no means the end of their duties, but that they were to act as general agents of Americanization and to exert as large an influence as possible upon the life of their towns. This last feature has been rewarded with some small success. They were styled "Teachers of English." About four hours a day were to be spent with children between the ages of six and twelve, one hour for the instruction of native teachers, on an average of perhaps three or four to the town, and night-school classes for teaching English to adults. In addition to these primary schools, provincial grammar schools have been established in a few provinces, and plans were outlined for provincial high schools. All these schools were to follow the usual curriculum of similar schools in the United States.

For the preparation of native teachers a Central Normal School is now completing its second year, and has a present attendance of 530 students. Five other tributary Normal Schools were established, but were subsequently taken over as Provincial Grammar Schools. An agricultural school has been set up on the island of Negros. A trades school has also started in Manila, but it has been handicapped by the slow arrival of equipment; and the attendance is small on account of its unfortunate location at a great distance from the homes of the working classes. The announcement of the special schools for the deaf and dumb, blind, &c., was premature, and the establishment of such schools has not yet come up for consideration.

A glance over this brief summary of the system as established indicates that the teaching of English has been kept in the forefront. Considered as an educational system that is to take hold of the life of the Filipino people with the uplifting force that is necessary to elevate them to the plane of our expectations, it will appear to all educators to fall considerably short. It is not in harmony with the best that is in American educational theory or practice for the problem of race development. The Filipinos are in a low economic state, industry is neglected, labor is dishonored, the fields yield poor returns to ineffective cultivation, and many lie idle for want of labor. The Bureau of Agriculture announces that $3,000,000 worth of rice was imported into the islands during twelve months, for the production of which the idle land in Tarlac Province alone would have been more than sufficient. The admission of Chinese labor has been urged as a temporary expedient, but where is the permanent labor supply coming from? Wealthy Filipinos, who are beginning to open their eyes to the use of machinery in farming, are discouraged by the scarcity of men to operate and care for the machines. If Filipino labor is to be depended upon, what agency will create it, other than a rational public school system?

THE MAKING OF CITIZENS.

Moreover, our mission here is said to be the molding of an enlightened citizenship and preparation for responsible self-government. The best thought of our day teaches that economic betterment is the safest path and the surest to political liberty. Abstract ideas from "book learning" have sowed many a whirlwind for which common sense and the selfish conservatism, if you please, of industry and material welfare are the best ballast. The governmental, the economic, and the social problems ought all to be solved by educational agencies. It is one of the peculiar contributions of America to the world that education will solve them. If we are going to maintain the thesis, let us apply to the questions of the Philippines the best that we have.

We might dip down in many places for a statement of current educational doctrine. Two paragraphs from the declaration of principles put forth at Knoxville, Tenn., at the Summer school for the South, last Summer, will suffice:

"A mere extension of the present school term with the present course of study will not meet the needs of the children. The lines of development in the South must be both agricultural and mechanical. Our people must bring a trained brain and a trained hand to the daily labor. Education should be a means not of escaping labor, but of making it more effective.

"The school should be the social centre of the community, and should actively and sympathetically touch all the social and economic interests of the people. In addition to the usual academic studies, therefore, our courses should include manual training, nature study and agriculture."

The school here suggested is not an isolated or special institution, but the common public school.

The poverty of municipal revenues in the Philippines is a limitation upon the school system and would bar any costly school plant. The insular revenues have been found sufficient for the Insular Government and for the undertaking of many wise improvements. In addition to municipal school funds expended for buildings and the salaries of native teachers, the insular Government expended for schools in the fiscal year ended June 30, 1902, approximately $1,400,000, or more than one-seventh of its entire revenue. About two-thirds of this amount was expended for salaries. It is therefore apparent that the most careful handling of funds is necessary to accomplish a great work.

A POSSIBLE PLAN.

It would be possible by the withdrawal of the American teachers from the towns and their concentration in the chief town of each of the thirty-six school divisions to establish a school community and a school plant that would meet the needs of all-round development. Such a school should make an essential part of its curriculum training. The dormitory system, which could be cheaply managed, would place the whole life of the student for a term of years under American influences.

The work in the towns would meanwhile go on more slowly in the sole hands of native teachers under the supervision of the Division Superintendents. When in the course of a few years the stream of graduates began to take hold of the schools and of other public and private work, the towns would feel an impetus that would be telling in its effect. Without retrenchment, so far as aim and results are concerned, this system could be conducted with half the high-salaried American force now on the ground. The initial expense would of course be considerable. Instead of the discontent to which their isolation now gives rise, good teachers would be satisfied to remain several years in the islands and experience would redouble their effectiveness.

Some such plan as suggested would certainly commend itself to American educators as aiming in the right direction.

Since at the time this article is being written the school administration has not yet been installed, its policy remains unannounced, and the writer has made no attempt to forecast it. The temperaments of the new Secretary and Superintendent lead us to believe that the work will be done first and the results will be left to proclaim the policy.

The new Commissioner, Judge James H. Smith, has had a varied experience in the Philippines and is highly qualified for his position. Not an educator by profession, his practical good sense will allow the Superintendent a large measure of control. Mr. Elmer E. Bryan, the new Superintendent, takes up the work amid the most general feeling of confidence, and the outlook is regarded as hopeful.

DUCK-BILLED DINOSAUR

Its Skull the Latest Addition to the Museum of Natural History.

IT IS very generally agreed among scientists that if any unthinking person had approached the duck-billed dinosaur, whose skull is the most recent addition to the collections of the American Museum of Natural History, and had called the beast to his face the name by which he is best known in these latter days of comparison, the dinosaur would have seized the offender with that same bill, ground him up among his 2,000 teeth, and cast him forth a wreck.

Of course this would have to happen a small matter of three or four million years ago, during the cretaceous age, the last period during which the reptiles enjoyed life as rulers of the earth. But what are a few million years between scientists anyway? Here is the skull of our old friend, the duck-billed dinosaur, well mounted in among the various fossil horses and rhinoceroses, the mammoth and the mastodon, in the big gallery hall of the American Museum! The duck-bill is the patriarch of them all, and, though less ancient than the brontosaurus or amphibious dinosaur by maybe a few hundred thousand years, he is so many aeons older than his confreres at the Museum that they are to him but the creatures of yesterday, mere children, themselves only a few thousands of years older than pigmy men.

But to return to his habits and what would happen to the rash human who addressed him as Duck-Bill, or even Ducky Dear. The human would not be eaten for the reason that the duck-billed dinosaur is, or was, a herbivorous creature, who scorned any but a vegetarian diet. That probably would be a small concern to the human, however, when the dinosaur got through with him, as the dinosaur was a matter of thirty-eight feet long and built to match. The skull, whose beak would scoop up the human much as a duck's beak gathers in a small frog, is 47 inches long, and the beak itself 15 inches wide.

The duck-billed dinosaur would have been a disappointment to a dentist. At first sight, and particularly after a careful count had shown that the dinosaur's teeth numbered into the thousands, the cretacian dentist might well have rejoiced. But, alas! nature willed otherwise and supplied the dinosaur with a self-perpetuating scheme whereby, as soon as he had worn out one set of two-inch teeth chewing the tender portions of legs and other such, another set took its place, and so on ad perpetuum.

In front of these teeth is the broad bill, from which, according to modern-day scientists, the duck-bill received its name. There was, however, another theory being passed around among the fossil folk at the museum yesterday, which somebody remembered having been told by his grandfather when only a few hundred years old.

"This was that the duck-billed dinosaur was originally known by the dignified title of William Dinosaur, Esq., and that on account of his extreme length, or, rather, height, (for it was his habit to walk on his hind feet, deftly balancing his gyrating head with his calm, beautiful tail,) he frequently, in a fit of abstraction, would bump his head on the upper branches of trees and things. So his friends acquired the habit of crying out "duck, Bill," until finally the phrase coined itself into the dinosaur family name, there to remain during all time.

However, this is a matter of difference of opinion between the scientists and the fossil folk, and cannot be said to have been exactly determined.

A great runner was this duck-billed person in his palmy days, according to a report from the classaurus, an old friend of his, now preserved in part on a slab in the Yale Museum, and there were few of the dinosaurs that could beat him in a hundred-mile sprint. Sailing along on his hind legs, with his front legs beating time and his forty-seven-inch head well balanced by his many-foot tail, the classaurus says he was a sight for the brontosauri.

Just how the duck-billed dinosaur lived neither the scientists nor the fossil folk are able to enlighten us. From the general habits of his kind, as evidenced by the places in which they chose to die and leave their remains, it is judged that he either lived in a swamp or else followed a prevailing custom of making a swamp the family burying ground. The duck-bill's skeleton, nearly complete, is now in the possession of the American Museum and is being prepared for exhibition.

OLDEST ALUMNUS OF DARTMOUTH

Charles Wingate, Graduated in 1832, Celebrates Ninetieth Birthday.

TO graduate from one of the old New England colleges seems to be some promise at least that one will attain to a considerable age. It is a curious fact that of the eight oldest college graduates in the United States five of the old New England institutions contribute one each. The oldest living college graduate of an American institution is Charles Rhind of this city, who was graduated from Columbia University 1827, who is followed closely by the Rev. A. H. Mitchell, who gained a diploma from the University of Georgia in 1828. St. John's College of Maryland has in Edward Paunell an alumnus of the class of 1830.

Five men are still living who were graduated from college in the year 1831, and they are the Rev. E. W. Thayer of Amherst, John Rand of Bowdoin, Daniel Hay Chase of Wesleyan, William Rankin of Williams, and the Rev. Joseph S. Lord of Yale. Dartmouth's oldest living alumnus was graduated in the class of 1832, and he, Charles Wingate of 38 Cambridge Place, Brooklyn, has just celebrated his ninetieth birthday, he having been born in New Hampshire Jan. 26, 1813.

Mr. Wingate's father lived to be ninety-six years of age. Another member of the family, Moses Wingate, of Haverhill, Mass., lived to be 103 years of age, and at the time of his death he was the oldest Mason in the country. Still another member of this long-lived family was Paine Wingate, the oldest Harvard graduate at the time of his death, at the age of 101 years. The family is related by blood and by marriage to President Roosevelt, President Eliot of Harvard, and other noted Americans.

Among the classmates at Dartmouth of Charles Wingate were Prof. Daniel J. Noyes, Prof. Calvin Webster, Prof. Stephen Chase, Attorney General W. C. Clarke, Dr. Edwin Sanborn, father of Kate Sanborn; Prof. Calvin Tracy of Lansing, Mich., Gen. Joseph B. Webster, the Rev. Amos Brown, and the Rev. George Warren Wood.

Leaving college at the age of eighteen Mr. Wingate taught school for a time in Vermont. He came to New York in 1834 and boarded in Liberty Street, opposite the Middle Dutch Church. He recalls vividly the great fire of 1835, which swept the city below Wall Street. For several years he lived in the old Seventh Ward, near East Broadway, where numerous Quaker families, such as the Willetts, Macys, Murrays, and Woodwards, resided.

The Rutgers homestead was here, with other old dwellings, while the second generation of Vanderbilts lived in the same neighborhood. Here Solomon Jenner kept a school largely attended by "Friends," where Mr. Wingate taught for a number of years. He then established a school of his own with Daniel Breed. Not long afterward Mr. Wingate took a position as bookkeeper in Mathew Brady's photographic establishment at Broadway and Fulton Street, where he formed the acquaintance of many celebrities of the time, including Gen. Scott and Edwin Forrest, who came to sit for their pictures.

In 1840 Mr. Wingate became an instructor in English and mathematics at Charlier's French Institute, on Twenty-fourth Street, where he taught many sons of leading New York families. About the year 1860 he gave up teaching and became an insurance agent, and followed this pursuit until disabled by age for active business. Mr. Wingate has had six children, five of whom are still living.

Development of Arkansas.

PROOF of Arkansas's gradual yet rapid development is constantly forthcoming, says The St. Louis Republic. Within a few weeks a large number of new enterprises have sprung up, among which are a one-hundred-thousand-dollar development company and a large lumber company at Pine Bluff; a large mining concern at Yellville, a fifty-thousand-dollar lumber company at St. Paul, a twenty-thousand-dollar wagon factory at Jonesborough, a three-hundred-thousand-dollar sawmill at Lapile; at Forrest City a large gin and milling company, and at Blytheville a big spoke and handle factory. Arkansas's exhibition of its wealth, resources, and industrial progress at the World's Fair will be a revelation to the United States.

GERMANY'S COLONY IN EAST AFRICA

Its Governor Describes Its Possibilities and Tells of Work of Development Which Is Being Done.

Foreign Correspondence New York Times.

BERLIN, Jan. 17.—Lady Curzon is not the only American woman whose husband rules over a colonial empire. A similar position is also held by the Countess von Goetzen, who is now in Berlin with her husband, Count von Goetzen, the Governor of German East Africa.

The Count, who has leave of absence until March, is stopping at the Hotel Bristol, where he received THE NEW YORK TIMES's correspondent yesterday and talked in an interesting manner of the country of which he is Governor.

"German East Africa is double the size of Germany," he said, "and has a population of 6,000,000, of which only 1,000 are Europeans. The country is very productive and rich in mineral wealth. Knowing American enterprise, I am surprised that American capital has not considered German East Africa a good place for investment. I am now seeking capital for the purpose of building a railroad to connect Kiwa, in the neighborhood of our capital, Dusresalaam, with Lake Nyassa. This road, if built, will be of immense value, for it will make possible the control of trade between Lake Nyassa and Lake Tanganicka.

"Land is given to prospective settlers in German East Africa under the most favorable conditions. It is interesting to note, in this connection, that a large number of Boers have settled in our colony. We consider these settlers of great importance, for the Boers, having much experience in practical agriculture, can give a good example to German settlers. German East Africa's mineral wealth has been only partly exploited. At Trambs, in the Kilimegaro, a twenty days' journey from the coast, gold mines exist. I have also given much attention to the development of mica.

"German East Africa has an abundance of cattle, which are exported. Game also abounds. The native population of German East Africa on the whole is an industrious one. The nègro of the eastern coast is more intelligent than the American African, who comes originally from Western Africa. Most of the people living in our colony are Mohammedans.

SLAVERY ALMOST ABOLISHED.

"Slavery in German East Africa is gradually becoming a thing of the past, slave dealers being severely punished. The result has been that many Arabs formerly engaged in the traffic have become very poor. We are still permitting the so-called house slavery, which can be abolished only by gradual processes.

"Daaresaalem, the capital, is increasing in size and is becoming an important shipping centre. It has the best harbor on the African coast and is equipped with a dry dock.

"The climate of German East Africa is very enervating, but is no worse than that of India and Ceylon. In the highlands of the interior a delightful sub-tropical coolness prevails. We are now planning to establish in the Usambara Mountains, where the good coffee is raised, a hill station, in which to spend the warm season, patterned after similar ones in India. We shall also establish a biological experiment station, similar to the famous one at Buiten Zorg, on the island of Java.

"Daaresaalam can be reached from Naples in two weeks by the German East Africa line. Socially, it is not a bad place, and my wife is much pleased with it. We have our own yacht, and, besides, can visit Zanzibar by steamer, the island being only four hours distant. We frequently have regattas and tennis tournaments with the foreign residents of Zanzibar. At home we often have concerts by amateurs, take delightful drives in the romantic environs of Daaresaalam, and, with our regular governmental duties, the day passes rapidly. Speaking of our drives, the story is true that when we were out riding a leopard attacked us, but the animal fled when I struck it with my whip. The story, it seems, was cabled over to America, for my wife's relatives had a special mass celebrated to express gratitude for our narrow escape.

SELDOM WEAR UNIFORMS.

"Regarding military life in German East Africa, I wish to say that while of course drills and military parades take place occasionally, military exploits do not form the sole object of the colony. I also desire to correct the impression given out by Poultney Bigelow and others that German East Africa is governed on military lines and that officials and officers constantly wear uniforms. The very contrary is the case. Men go mostly in civilian clothes, and only on special occasions wear uniforms."

Count von Goetzen's rule of East Africa has met the entire approval of the German Government. He was sent to Africa not merely as a military man, but as one who by travel and numerous explorations had become thoroughly acquainted with African life and conditions. It, of course, caused quite a little stir in German military circles when the German Government appointed a man Governor of its foremost colony who as Colonel ranked below many officers who had spent the best years of their life in Africa. But it was Germany's aim to model its colonial system after that of England, and it found in Count von Goetzen the right man for work on these lines.

His methods have been unbureaucratic, and in every possible way he has given active support to the merchants and planters living in the colony. He frequently holds meetings at which these elements are present and hears from them their grievances. He has solved the difficult labor problem of how to obtain men to work on the plantations by bringing natives from districts in the interior. It is his aim to put the colony on such a financial basis that it shall be self-sustaining and financially independent of the home Government.

Gov. von Goetzen is very popular with the natives, whom he has endeavored to treat humanely and fairly. He hopes to establish a native council, somewhat on the same principle as that adopted by the British in India. While in East Africa, owing to his arduous official duties, Count von Goetzen has not found much time for scientific work, although he carefully watches what is being done in that direction in his colony. It is, however, still remembered how he explored Africa from east to west, discovered Lake Kungo, and climbed the Volcano Kirungu, a daring feat which the natives said could only result in death. The numerous collections, both zoological and botanical, which he brought to Europe are of great value, and eminent geographers, such as Kiepert, have praised the accuracy and reliability of his maps.

E. T. BEYN.

DIFFICULT JOB TO PHOTOGRAPH FISH

Many Amateurs and Some Professionals Waste Plates at Aquarium.

OF ALL the difficulties with which the amateur photographer has to contend in his search for novel subjects for his camera," recently remarked Custodian Spencer of the New York Aquarium, "that of snapshotting living fish in the exhibition tanks here at the Aquarium is about the worst on the list.

"To the unsophisticated," continued Mr. Spencer, "it seems an easy matter to make a good picture of the larger fishes as they swim lazily about their tanks. The water appears clean and the light seems all that could be desired, and almost every day some enthusiastic but deluded kodak fiend makes the round of the Aquarium 'snapping' the most desirable groups.

"But it is not always the amateurs who are fooled," went on Mr. Spencer. "Quite recently a reporter on one of the illustrated dailies came here, accompanied by a staff photographer, and asked permission to make some pictures to illustrate a story. Of course, permission was granted, and, although warned as to the fruitlessness of his undertaking, the photographer proceeded with his work and departed confident that he had several good views, but I was by no means surprised when shortly afterward a messenger from the paper dashed in and inquired if I could not loan it some photographs.

"Now, when we wish photographs, we remove the fish from the exhibition tanks to an aquarium specially constructed for photographing purposes," indicating by a motion a group of long and extremely narrow aquariums resting on a table in the laboratory, "and even under such conditions the results are often disappointing, success only being assured under the strongest light, and when the object is completely at rest.

"One of our greatest difficulties heretofore has been our inability to photograph the living fish in their natural surroundings, for just so sure as we introduce seaweed, foliage, rocks, or shells into the photographing tank, behind these objects the fish would anchor, and they acted generally as if they knew exactly what was taking place or had personal objections to sitting for their portraits. To overcome this contrariness on the part of the fish, I am having built an aquarium fitted with an inner glass slide, in the rear of which can be placed the 'properties' characteristic of the subject. Thus equipped, we will be better prepared to carry on the educational work which is now being done in our laboratory."

SELLING OLD LEASEHOLD LANDS

Special Correspondence THE NEW YORK TIMES.

UTICA, N. Y., Jan. 30.—The sale of those leasehold lands in Central New York concerning which there is interesting history has begun with the purchase by John D. Camenge of the old Gov. Dix farm, in the town of Brookfield, Madison County. There are upward of 200 acres in the place, and the price averages a little less than $20 per acre. Mr. Camenge has long held a lease of this farm, about which are clustered many remembrances of the illustrious John A. Dix.

John A. Morgan secured the land from the State in return for services rendered as a surveyor of State lands. John A. Dix married an adopted daughter of Mr. Morgan, and in the course of events came into possession of the vast landed estates of Mr. Morgan in Central New York, including a great many farm lands, which have come to be known as the Morgan-Dix leasehold lands. The present interests are vested in the children of John A. Dix, the Rev. Dr. Morgan Dix of Trinity Church, New York, and the heirs of Mrs. Dix's sisters, Mrs. Blake and Mrs. Balch, both of whom are deceased.

What is now the Camenge farm was a favorite country place of Mr. Morgan and Mr. Dix and the members of their families. It was their habit during the Summer to journey by coach, for there were no railroads, from Albany to the farm, and remain there several weeks. As they travelled with the dignity befitting their station their journey was an occasion of much interest to the country folk as well as pleasure to themselves.

Mr. and Mrs. Daniel Camenge, parents of John D. Camenge, were married at the home of Gov. Dix, in Albany, and, securing a lease, immediately took possession of the farm, which has continued to be leased by the Camenge family since 1840 until now, when many of these leasehold lands are being sold.

There are 50,000 acres of these lands in the Counties of Madison, Chenango, Oneida, Herkimer, and Otsego, lying within the towns of Sangerfield and Bridgewater, Oneida County; Brookfield, Madison County, and New Berlin and Columbus, Chenango County. The plot in Oneida County is comparatively small. There are also lands in Oneida and Herkimer Counties upon which is a tax levied for the support of churches.

In New Hartford, a suburb of Utica, the village property occupied by business places is leased by the Presbyterian Church to the tenants, and upon the expiration of the lease, which is not far distant, the buildings upon the lands will become the property of the church.

The famous Fort Herkimer Church, in the town of German Flats, Herkimer County, receives annually about $300 from taxes levied upon farm lands around about. Here it was decreed by the founders of this old church that as long as water runs and grass grows the lands designated shall contribute to the support of the church, and as the tax is one of the laws of the State the farmers are not able to avoid it.

There are about 250 tenants of the Morgan-Dix leasehold lands in Central New York, and among them there are to-day many descendants of the original holders of the leases. The leases to a small portion of the estates were originally given to the early settlers of the country, forever, but the words "as long as water runs and grass grows" were used instead of the other form. A great majority of the leases, however, were given for a period of "three lives, then in being," and the majority of these were issued from 1790-1800. Of course the most of the three-life leases will expire by reason of the death of all the persons whose lives measured the original duration, and as fast as they shall run out new contracts will be made with the tenants for durations permitted under the present statutes of the State of New York, so three-life leases now being legal.

In the original lease it was stipulated that the occupants of the land should set out pear and apple trees, and this was done invariably. They were expected to keep up the taxes and make repairs, an agreement with which they seemed to be in perfect accord, for in several instances the leases have been handed down since the three-life leases were created. In most instances the leasehold interests have been held by various tenants and are considered at a premium. This interest has often been a bargain and a sale between tenantry and prospective tenants, and again tenants holding these leases have been able to raise neat sums of money by using them as security.

HOW TIME TABLES FOR BIG RAILROADS ARE PREPARED

Superintendents, Trainmasters, and Chief Dispatchers Obliged to Make Exact Calculations—Changing the Schedules to Permit the New Fast Trains to Have Clear Tracks.

IT IS a puzzle to most people to decipher the ordinary time table of a trunk line railroad. Infinitely more complex is the problem of arranging that schedule. It is a problem to solve which the best railroad talent developed through seventy years of tradition and training in the railroad business is necessary. A prominent railroad official called attention recently to the fact that the reason the street railroad problem is proving so puzzling is that it is only a few years old and that no generation of street railroad men has been reared to cope with it. But with railroads it is different. Methods and customs have been worked out with greatest care. But all the effort that is possible is called into play in the arrangement and rearrangement of railroad time tables.

The first thing to be said about these tables is that they are an evolution. The Grand Central Station, for example, receives and sends out some 600 trains a day. But there was never a time when all of these trains were suddenly shifted to that terminus. The trains were added one by one and the schedules have been worked out year by year as the number of trains varied. A vast amount of experience is gained with each new train and each readjustment. A record of all of this is of course kept for future guidance.

The most difficult thing the maker of a time table has to do is to provide for a fast express. The very acme of a problem of this character was presented in the cases of the new twenty-hour to Chicago trains of the Pennsylvania and New York Central Railroads. In the first place, tests have to be made over every stage of the journey. From the results of these tests and from the schedules attained by other fast trains of the road it is possible to estimate very closely where a saving in time may be made.

The adjustment of time tables devolves ultimately upon the chief operating official of the road. He notifies the official of each division that a new train, No. 100, say, is to reach Station X at a certain hour, and will depart, after a change of engines, five minutes later, being due to arrive at Station Y, at the other end of the division, at a certain other hour. The trainmaster of the division must then prepare a schedule of trains for his division, and these tentative rearrangements must be sent to the chief dispatcher before the new train is put on.

Each additional train must involve a certain derangement of the schedule already in force. If the new train is a "filer" the derangement amounts almost to disorder. In the case of the Pennsylvania special, put on last Fall, the schedule of four trains had to be altered. The local or accommodation trains are most affected by these changes. They must get out of the way of limited trains in plenty of time, and passengers on the local trains are very likely to chafe under the delays that are inevitable.

THE FINAL SCHEDULE.

When all the tentative schedules providing for a new train are in hand, the chief dispatcher is in a position to prepare a final schedule. He must regard, especially in limited trains, the hours at which trains are expected to leave and arrive at important points. He cannot run a train along what might be called the "line of least resistance," for at the hours when there were fewest obstacles in the way of the "filer" there might be the greatest likelihood of no passengers being in waiting at the important stations. In the Chicago twenty-hour trains, for example, the aim had to be to enable a business man to do a day's work in New York City and arrive in Chicago in time to transact more business before closing hours next day.

When all the data are in hand, the schedule is prepared and notifications are sent out to the division superintendents. But the experimentation does not end there. There is a great deal to be done by way of adjusting experience to operation, so that the strain on rolling stock may be least. On the Pennsylvania Railroad, for example, the most difficult division to operate is that between Pittsburg and Altoona. Over this route there is an enormous traffic, while the grade is about twenty-five feet. The present trainmaster of the division has held his position for twenty-seven years. He is reported to have worked on the schedule for the Pennsylvania Special two nights and part of a day, and even then he was not entirely sure of his calculations. To compile and print the schedule for that division cost about $7,000.

In order to get the results which the company demanded in this case, it was necessary for the trainmaster literally to know every foot of track of the entire route. When the "special" finally made her appearance for the first time this master sat in the buffet car, his coat off. In one hand he held his watch. In the other he had ready the time card he had prepared. Just beyond Altoona there is a grade of ninety feet to the summit of the Alleghanies. The allowance for this part of the journey had been very close, and the trainmaster was very much concerned as to just what would happen when the engine actually began its climb up the hill. The train reached the top and began the down-grade run with one minute to spare.

The trainmaster sat watching his watch and schedule all the way into Pittsburg. He took the time at nearly every signal tower, in spite of the darkness of the night—for he knew every one of them by the "feel." The "special" at last reached Pittsburg, with three minutes to spare. It was then incumbent upon the master to readjust his schedule so that the running time should be distributed in such a way that the train might get the benefit of those three minutes, for, when running upon a fifty-mile-an-hour basis every minute means a great deal in the strain upon the rolling stock.

FOR LONG-DISTANCE RUNS.

In preparing a schedule for a long-distance run it is essential to establish an average hourly mileage for the entire trip. It is not possible to test the running time between two neighboring points, and by adding these together arrive at the maximum speed possible to attain between two distant points. The theory of these averages is that the train shall have sufficient leeway to make up time when necessary. It has been found that engineers will loaf along over parts of their trip in order to make faster time than their schedules call for over other portions of the route. It is generally understood that the special containing the party of J. Pierpont Morgan returning from the Episcopal General Convention at San Francisco last Fall was subjected to a prearranged delay of half an hour in order that the engineers on the Michigan Central Road for part of the way might make the 217 miles in 200 minutes.

The fastest time made by the Pennsylvania Special is a stretch of three miles in a mile over two minutes. This is equivalent to a speed of eighty-five miles an hour. Yet there have been occasions when better than eighty-five miles an hour has been accomplished. While going eastward on one of its trips this train made an eighteen minutes in a distance of eighty-four miles on a schedule calling for fifty miles an hour. It has been estimated that this train could lose twenty minutes on all more any part of the eastern half of the route, and still get into Pittsburg on time. Engineers who cannot make up time in the places where an allowance for it is made are laid off.

The Empire State express is scheduled to make the run from Buffalo to New York in nine hours. Yet it nearly always happens that this train, coming eastward, is late in reaching Albany. It is due to leave Albany at 7 o'clock and to reach New York at 10, thus travelling a distance of 149 miles in 180 minutes. But the occasions are not rare when on this run an engineer will make up as much as half an hour. The fastest part of the run will be made between Poughkeepsie and New York. Engineers who get in even a few minutes late several times in succession are given a vacation, because it takes nerve to run one of these trains at such a speed.

In making up the schedule for the trains of the Grand Central Station there is a peculiar problem, and that is the fact that the trains for both the New York Central and the New York, New Haven and Hartford Roads must come in over the same tracks. Thus a train leaving Buffalo or Albany must have its schedule regulated in accordance with that of trains leaving Boston or Bangor. There is an infinity of comparison and calculation called for in the preparation of even the slightest change in the schedules.

CHANGES FOR THE SUMMER.

The schedules of most railroads are changed for the Summer season. But the changes in one Summer are usually about the same as those of another Summer, so the experience of last year is utilized in the preparation for this year. But trains must be arranged not only with a view to a perfect running of the entire schedule, but provision must be arranged for emergencies. For example, at the end of the vacation season last year one train on the New York Central Railroad was run into New York in nine "sections." This was a train due in the city early in the morning at an hour when there is not only a large number of trunk line arrivals, but when the commuter trains are pouring in as well. The schedule must be prepared with a view to these extra "sections," and while one must look out for a certain amount of delay under such abnormal conditions, the delays must be as little as possible, for the derangement by even a few minutes of so nicely adjusted a schedule as that of the Grand Central trains upsets all the roads between Boston and Buffalo more or less.

Constant experimenting is in progress with a view to cutting down the time at various points along a road. Even now trainmen are calculating upon the possibility of running an eighteen-hour or even a sixteen-hour train to Chicago. It was found in the experiments preparatory to the twenty-hour schedules that the trip could be made with perfect safety in eighteen hours. By the longest route to Chicago an eighteen-hour train would have to run 54.4 miles per hour. Seventeen miles would increase the hourly mileage to 58 miles an hour. To make the trip in sixteen hours the train would have to go 61.3 miles an hour.

Sanguine railroad men say that the time will come when the trip to Chicago will be made in even fifteen hours. The average speed of such a train will be 65.8 miles an hour, and her running time will average 70 miles. On a large part of her journey she will have to run 80 or 90 miles an hour, while she will be equipped to run 100 or 110 miles an hour in emergencies.

LARGE OYSTERS SCARCE THIS YEAR

Chesapeake Seldom Popular in New York, Bought by Connoisseurs Now.

THERE are only two occasions in the year when the oyster is properly entitled to newspaper notoriety, the months when his season begins and when it ends. But the recent cold weather has worked such destruction to the oyster beds all along the coast from which New York draws its supply that the oyster is getting himself very much talked about just now. Not for years has he been such a celebrated personage as he is now to 100,000 or more men in and around New York, who depend upon him for a living. An exporter who owns forty oyster stores between New York and Chicago, and who handles 100,000 bushels every week in a good season, talked about the situation with a NEW YORK TIMES reporter last week on his float at the foot of Gansevoort Street.

"Oysters this year are very, very scarce," he said. "I don't mean that as a reflection on the oyster, but on the beds. They are to be found only in 'spots,' and in spots, too, where in former years we have scarcely taken the trouble to look for them. At all our usual sources of supply—Prince's Bay, the Kills, Shrewsbury, Great South Bay, Oak Haven, Buzzard's Bay, Rockaway—the oysters are so small that it is scarcely worth bringing them to market.

"There are plenty of small oysters in the market, millions of bushels of them, but large oysters, of even medium size, are as scarce as grapes in Greenland. The oyster that Thackeray made his famous epigram about has no place in the oyster crop of this year. New York does not like the small oyster. Restaurants and hotels have demand large oysters that make a show to a fry, or panned, or stewed. Some of the high-priced places are getting such oysters this year as they get each during the season, but the supply is at its lowest ebb, and is in the hands of large oyster dealers, who think nothing of keeping 50,000 or 60,000 bushels in reserve stock every year. These men take long chances in ordinary seasons, but just now everything is coming their way.

"Every oyster bed along the coast contributes to the tremendous supply—2,000,000 oysters a week required for consumption in New York, but until the Winter season set in there have been very little to do with the Maurice Cove and lower Chesapeake oysters that are so plentiful in Philadelphia and Baltimore. A few connoisseurs are fond of their peculiar taste, but they do not suit the average palate. This year, in order to get an ample supply of large oysters we are getting what ever can be spared from the Philadelphia and Baltimore markets.

"An oyster that has been from death, as tens of thousands were last week, is not necessarily unfit to eat. The steam dredges must hustle to shove him as fast as they get him, and he is served up in restaurants of the first class without delay."

THE FINANCIAL SITUATION

From the standpoint of speculation there was little of interest last week, but from that of the general financial situation there is something to be said, and it is generally of good report. Wall Street has got over its money scare completely. Call loan rates fell to a lower basis, and while it is believed that they will not work much, if any, lower, and while there is a clear appreciation of the fact that in the second part of the year there will be the usual crop-moving stringency, this consideration causes no present disturbance. The Panama Canal payment, it is understood, will be financed by the Government, with the least possible disturbance to the money market, and, moreover, will not be necessary before July. Secretary Shaw has told certain of his friends that he contemplates refunding later in the year. The corporations are taking advantage of the ease of money to safeguard themselves by arranging time loans that will provide for their necessities for a year to come. The terms of the thirty-five-million-dollar Pennsylvania loan are noteworthy as explaining why such a transaction has had so little effect upon the money market. The road does not want all the money at once, so the vast sum has been redeposited in the banks, the company retaining the right to demand as much as it needs from time to time on call. There is also much less apprehension of gold shipments. Whatever may be the truth concerning our foreign indebtedness, and some experts declare that the amount has been vastly overestimated, it is clear that we are engaged in paying off a large part of it by the heavy exports of grain and cotton. The European financial situation is improved, gold shipments have been postponed, and there are those who predict that we will import more gold this year than we will export. There are too many occult factors in the foreign exchange situation, however, to make certain the exact position of international credits. With easier money and more favorable exchange conditions, and with the Venezuelan dispute approaching a satisfactory and peaceful settlement, although the terms are still under negotiation, the skies of the financial world are clearer than they have been in a long time.

A British financier returning from a tour of the United States reported that it was "the land of unlimited possibilities." This Nation is still unconscious of the powers latent within it, and of the great future lying before it. Notwithstanding the wonderful development of the past six years, we are still using the standards of twenty years ago, hardly yet able to comprehend the new conditions that have developed. We still distrust ourselves, and still underestimate our own abilities. Europe, which was at first slow to recognize our growing powers, now seems to have a truer appreciation of our position than we ourselves. The Panama Canal treaty, and the practical settlement of the Venezuelan dispute are events of the past week which stand for National expansion and honor. The completion of the Panama Canal will open wider the gate of the Orient, first unlocked for us by Dewey's guns. The Venezuelan settlement is a virtual victory for the Monroe Doctrine, the recognition of which, as having the force of international law, is only necessary to establish our prestige in South America beyond question and dispute. Our expanding power and trade are feared by Europe, which is beginning to realize that we have begun to take the first place among the nations. It is safe to say that the future of the world, so far as the first half of this century is concerned, lies with this Nation. How small, therefore, seem the pessimistic utterances of those who, with eyes fixed upon the ground instead of the far horizon, see only trouble and disaster.

The fact is that we have only just entered upon our career of National expansion. But Wall Street, if it looks ahead a whole year, thinks that it is taking a wide view of things. Usually it narrows its range of vision to a much shorter period. Just now it is plunged into stagnation, because evidently it prefers to look upon the uncertainties of this year than the brilliant promise of the future. It has troubled itself about the stringency in money that is probable the last half of the year, and is despondent about the outlook for currency legislation. It has talked about our debt to Europe and is surprised that gold exports have not begun. The splendid sweep and activity of business are for the time being overlooked, while undue emphasis is laid upon the difficulties of the immediate situation. Nothing seems more certain than that this country will enjoy another year of great prosperity unless there is a crop failure, and such liquidation as to create doubt and distrust. So we have speculative dullness in a time of industrial prosperity and trade expansion. It is far better, however, to have this than the reverse. A certain amount of speculation may be a valuable accompaniment of a legitimate market, but it is probably well that we have this pause in the stock market, to make us the better able to digest what we have already taken in, and to pay our debts and get into position for the future needs of business. The stock market is still waiting, Micawber like, for something to turn up, and in the meantime the industries of the country are not standing still, but are striving for the commercial mastery of the world.

The stock market dullness is therefore a thing apart from the rest of the country. Its inertia is attributable in part to the results of the extraordinary folly of those speculators who sought to get up a great bull campaign last Fall at the very time that the resources of the money market were required for the marketing of the crops. But of course the stock market will not always remain in the rut it is now in. It will begin to move some time, just when and how even the closest observers are unable to know.

One of the notable features of the past week has been the number of railroad statements of earnings. Generally the gross for the opening weeks of this year show an increase, and indeed there is no question as to the immense business the railroads are doing. The only question is that of inability to handle the extraordinary traffic. The railroads are unable to supply the transportation facilities needed by the business of the country. As to the December statements, they disclose, as a rule, an increase in operating expenses due to advance in wages and in cost of materials. In some cases this results in net decreases. The problem of railroad expenditures is looming up with unusual prominence. The coal roads make exceptionally brilliant statements. Their earnings since the end of the strike have been immense. St. Paul's December statement was of special interest because it reported a small decrease in gross as well as net. The former was due to a blockade caused by storms, and has no significance. In the past six months the company has gained $791,717 in gross earnings and $515,290 in net. Like others, the road has been pressed with traffic so as to have called forth the statement that the company cannot furnish cars to meet the business offering, notwithstanding the fact, it is urged, that "the road is very well supplied with motive power, and could get more service out of the car equipment if consignees were prompt in unloading the freight delivered to them." The latter is a complaint which invariably arises when traffics are abnormally heavy, and while efforts—even unusual efforts—have of late been made to correct the tendency to retain cars for storage purposes pending favorable opportunities for discharging shipments, it has been seen in many more quarters than the one in question that the difficulty does not yield.

Bottom facts in the case, of course, are that the roads as a general rule have experienced a rush of business altogether unexpected and unprecedented, and that despite all that has been done, both to add to rolling stock numbers and improve equipment capacity, the volume of freight, continually increasing, has absorbed expanded facilities, and run ahead of them. In St. Paul's case, during the five years subsequent to 1897 ton miles have almost doubled, while, measured by mileage operated, there has been a gain of 247,644 ton miles per mile of road, equal to close upon 70 per cent., every year contributing something to the average improvement.

What has been accomplished to meet this heavy increase in traffic density shows well enough that officials of the road have been alive to the necessities arising, but it is nevertheless obvious that here as elsewhere proper diagnosis of the case was not made. Two or three years of such growth may have been the reasonable thing to look for, but anticipation never ran to five or six years, with the latter part of the period as productive of increasing traffics as the first. Transportation department returns indicate that in car loading there has been since 1897 an improvement of 4.21 tons, or 40 per cent., and that in loaded cars per train miles the gain has been 3.50 tons, or 22 per cent., raising the average trainload no less than 118 tons, or 70 per cent., quite the equivalent of the growth in traffic density, it will be observed, as just referred to. And of course this has had corresponding beneficial effect upon train mile earnings, despite a lowering of the average rate of remuneration per ton mile. It would seem, however, that even greater effort must be put forth to cope with tendencies which have developed, and that, particularly as to car shortage, the factor that long has been will still remain a factor to be reckoned with, namely, the delay on the part of consignees promptly to release equipment which has fulfilled its mission. Frank statement is made that grain shipments would new be larger but for the supply of cars being inadequate, and indeed that in all directions the movement of freight is not limited by offerings, but by facilities which are overtaxed. The view that the outlook favors big records for the current year is indorsed by what is taking place, while it is as certainly demonstrated that records would be swollen to still greater proportions were it possible to remove the obstacles to their making.

Very considerable expansion in gross earnings is expected for the current half year from such roads as tap the corn belt, where conditions differ materially from those prevailing a year ago. Atchison, whose interests are large in several of the corn States, made a showing of somewhat small gains for December, one which has been freely commented upon. It should be borne in mind, however, that the company set up heavy totals for December, 1901, with which to make comparison, gross for that period increasing more than one-half million dollars, of which nearly one-half was converted into an increase in net. Generally speaking, Southwestern roads so far have made out well against 1901, but current results will have the advantage of following less formidable totals, and at the same time an important influence will be the existence of better conditions to furnish traffic.

In view of the active manner in which exploiting the Southwest has lately proceeded—the activity in particular of Rock Island, for instance—of the large mileage which some roads have in Oklahoma and Indian Territory, and of the larger interests being set up within that somewhat prescribed area, it is of importance to know what has marked progress as far as facts are ascertainable. Obviously there would be little doing in the way of new railroad construction unless conditions were such as to invite reaching out for business. We have it on record, however, that last year in the section referred to 1,073 miles of track were laid—562 miles in Oklahoma and 511 miles in Indian Territory—which is close to 20 per cent. of the new railroad work for the entire country, calculated at about 5,500 miles.

Recent records of these two Territories, in fact, reveal quite remarkable features, sufficiently remarkable to account for the interest which they have attracted on the part of officials of important railroads, and although it is not possible to bring results up to a later date than the census period, these may be cited as offering the necessary evidence. Further, there can be no doubt that progress has continued toward improvement, it being true that, at least as far as one of the staple products is concerned, corn, Oklahoma and Indian Territory harvested the largest crop on record last year, 79,000,000 bushels, as compared with 28,000,000 for 1901.

Census returns, covering 1899 and 1900 as to value of farm products and 1900 and 1902 as to value of farm property, bring out striking features. Oklahoma has gained $178,122,798 in the value of farm property and $45,007,869 in the value of farm products. Indian Territory has gained $92,181,615 in the value of farm property and $23,237,992 in the value of farm products.

Facts which prove that the Territories have compelled attention are here apparent. How far they will make good expectation founded thereon remains to be seen. Report has it that so far from having provided any disappointment, expectation has been based on too low an estimate of the vitality which has developed.

Canadian Pacific and Hudson Bay shares have been the object of considerable attention recently in the New York and London markets. Canada, like the United States, is undergoing a period of expansion. Canadian Pacific earnings in December showed an increase of $461,412 gross and $103,750 net. The results of its business for 1901-1902 show a gross income of $37,503,000, against $30,855,200 for the previous year, and a net income of $15,044,739 against $13,043,800. After payment of fixed charges and the 4 per cent. for the preferred and 5 per cent. for the common, there remains a surplus of $8,068,073, against $1,114,458 the previous year. The surplus shows a balance of $14,165,654. It is not alone due to the growing transportation income that the balance shows such an immense improvement, but the sale of land properties has added to its great success. There were 1,862,853 acres of land sold for $4,442,136, against 390,908 for $1,262,224 the previous year, which made it possible to cancel the balance of the $25,000,000 5 per cent. loan land grant. The company still has in unsold lands 21,103,123 acres, which at the present price of $3.25 per acre, would realize $68,585,000, inclusive of the sold lands, which realized and are still to be accounted for, $7,025,254, together would make the sum of $75,610,254. The income from other lands still to be sold will be utilized to cancel the rest of the 3½ per cent. land grant bonds, amounting to $15,000,000. After payment of these, the income of other land sales remain at the disposal of the Canadian Pacific Railroad. Still it cannot be assumed that an extra bonus is to be paid to the stockholders. The Canadian Pacific, 3,000 miles long, figures as about $100,000,000, regardless of the $15,000,000 cash the company has on hand. Just as the land sales go on next year and the railroad values in debenture stock increase in value, the fixed charges of the railroad will be greatly reduced.

PROSPERITY OF THE WEST

ST. LOUIS, Jan. 26.—Through more than half a dozen years Wall Street activity and Wall Street buoyancy have been predicated upon National prosperity. Through all this period there has been continual dispute of the soundness of this prosperity. Wall Street expansion in volume of business and in market values has been confronted uninterruptedly by a professional pessimism that has insisted that good times chronicles were inventions. The foolishness of this has been amply realized by business men of sanity, and outside of Wall Street there has been actual inability to comprehend how doubt could command attention. But that the doubters and disputers feel more or less sure of their ground is amply disclosed in one fact—the fact that, while outsiders have grown rich, while comprehensive investors have multiplied their fortunes, barely two or three of Wall Street's professional speculators have progressed at all. The average speculative "professional" of Wall Street is poorer to-day than before the good times era started. And in this may be found suggestion of how it is that so much of quibbling and skepticism still greets prosperity records. Especially are the blue fry aggrieved against chronicles of Western growth and betterment. They characterize bulletins of Western good times as fables, and schedule them as traps set for investors. The sure sequel, according to all these oracles, must be National disaster. The public, they insist, must some time soon wake up to find how sore has been its delusion. Good times announcements are made, they proclaim, only to fool and to defraud. Curious, performance like this? Curious? Certainly. But it is precisely the performance to which Wall Street is now treated, just the performance to which Wall Street has been treated for more than five years past.

One vital issue is raised—Does National prosperity really exist? And what is the truth about the West?

Official records, Government records, testifying significantly, can be crystallized into exhibits like these—eloquent epitome of Western progress that means National progress:

A DECADE OF MANUFACTURING DEVELOPMENT.

***

Investigation—personal, careful, and conservative—of these records, and of the conditions that produce them, can render the business world real service; and such investigation I undertake with some enthusiasm.

H. ALLAWAY.

Recent Progress of Missouri Pacific

Prominence of Missouri Pacific in the recent market has, as usual, been connected with a variety of rumors regarding pending developments, which are spoken of as involving the whole Gould system of roads, with more emphasis this last time laid upon the progress of the company's earnings and the prospects for these to receive further stimulus from the known favorable conditions prevalent in the States of the Southwest. Demonstration of the fact is possible that the territory which produces the traffic of the Missouri Pacific lines has shown remarkable growth as to its agricultural and manufacturing output, and that by comparison it takes a favorable position as against any other section of the country or all other sections combined. In many localities, as may be supposed, manufacturing is still conducted on a very limited scale, but even this has shown signs of life and activity suspected by few, even of those who may keep in fairly close touch with average conditions. As to agricultural progress, the value of farm property, of farm products, and the extension of land cultivation the change has been marked, resulting in a largely increased contribution to traffics of Southwestern roads, in which Missouri Pacific very naturally has come in for a share. As the immediate future promises a large tonnage from the hundreds of millions of bushels increase in corn and oats harvested last year, and as a prosperous situation is the average feature over the whole area, it is not to be wondered at that expectations with regard to Missouri Pacific earnings should run high. Somewhat prematurely, it may be, possible increase in the dividend rate has already been discussed, although the net results for the late year are heavily behind those for 1901—nearly a million dollars—it being deemed within reason to expect excess of income not only from the company's own profits, but from securities owned, which at present are unproductive.

Be this as it may, there can be no question as the score of the Missouri Pacific lines serving as an area whose ability to furnish volume of traffic has been established, for even in the year just closed gross receipts made a new high record, the crop failure of 1901 having proved no barrier to this rather remarkable development. In the circumstances, no excuse need be offered for inquiry into what has taken place over an extended period, seeing that predictions on the past so largely enter as a factor into expectations for the future. Some time, of course, will elapse before details can be had concerning operations for 1902. They are not altogether essential, although they would be useful in bringing comparison up to a nearer date. For 1901 operations were reported on an average of 5,535 miles of road, the Central Branch and some minor mileage being included, which had not been the case formerly. This combination of results puts out of court a good many comparisons which might be made, but the requisites to an interesting showing may still be gotten at by adopting the figures for the corresponding mileage, as far as this can be done with fairness. To show up Missouri Pacific's recent record against such a record as was made, say, for 1895, or one of those dull years, when business was at a low ebb and earnings were decidedly off, would serve a certain purpose and make for a startling statement. It would hardly indicate with correctness actually changed features on an acceptable level. More enlightenment would certainly be obtained by adopting a previous good year, even though the changes to be brought out should prove anything but sensational.

Such a year was 1892. In fact, 1892 was more favorable for traffic than any previous year, or any year for some time subsequent thereto, although it was the year in which dividends were suspended through the whole period, not to be resumed for nearly a decade. Mileage operated, taking in the Central Branch, averaged 5,368 miles for 1892, and so persistent has been the effort to maintain the system without further expansion that by 1901 the increase shown is no more than 167 miles, equal to only 3.1 per cent. From this preliminary statement it is evident that what comparisons will show as to traffics may be taken as a fair indication of increase in productive power of the community served. These items may be introduced:

	1901.	1902.	Increase Over 1892. Amount.	P. C.
Average miles operated	5,535	5,702	167	3.1
Ton miles	2,542,315,399	3,421,028,038	878,712,639	34.6
Per mile of road	457,630	599,970	142,340	31.1
Passenger miles	270,595,290	331,223,519	60,628,229	22.4
Per mile of road	48,890	58,100	9,210	18.8
Ton mile rate	0.826c.	0.724c.	*13.1	
Passen. mile rate	2.210c.	1.910c.	*13.6	

*Decrease.

Reduced to units of service per mile of road the freight business appears with an increase of 242,980 ton miles, or 61.0 per cent., the magnitude of the change standing out with greater clearness when it is remembered that 1892, over which the expansion took place, was a record year. Passenger miles per mile of road indicate less striking progress, but still show an increase in the equivalent of 22.4 per cent. While not excessive compared with the general decline in rates which took place in the ten years, the road suffered losses of more than 13 per cent. in the average remuneration it was able to obtain, both from passenger and freight. On earnings the result was marked, but on profits a more marked effect will be observed, as coming from reduction in the high average cost of operation.

	1901.	1902.	Increase Over 1892. Amount.	P. C.
Gross earnings	$35,661,094	$38,900,102	$3,239,008	31.0
Operating expenses	26,415,315	29,615,276	3,199,961	17.6
Net earnings	12,045,979	13,490,826	1,444,847	71.6
Expenses to earnings	77.2-56	76.1-56	*1.16	
Gross per mile	$6,600	$7,020	$420	20.4
Net per mile	2,240	2,433	193	68.5

*Per cent. †Decrease.

Between 1892 and 1901 the gross gain seems to have been $3,900,102, or 31.9 per cent., but the net gain was $3,444,826, or no less than 71.6 per cent., results on a mileage basis being close to these percentages, owing to the small changes in length of road. Prior to 1892 working outlays had heavily fluctuated. The proportion of gross absorbed was 62.24 per cent. for 1887, but as high as 72.56 per cent. for 1892. A long period followed that year in which the ratio ran far in excess of what may be called the necessary figure, at times going as high as 80 per cent., and reducing (as in 1895 and 1896) the company's profit total to a point where it failed to reach the total of obligatory disbursements. Missouri Pacific never defaulted, however—never has defaulted—and the advent of more favorable conditions in recent years not only permitted the contraction of operating outlays, but the resumption of dividends and the reporting of a substantial surplus. Net earnings for 1901, it will be seen, even on a mileage basis, increased $983, or 68.5 per cent., over 1892, and while for the late year this item will show some reduction, expectation that full recovery will be made is what has done much to stir up interest in the stock. End of net decreases came in September last, and for November the best exhibit for many months was put out. Gross earnings, it has already been said, are at new record figures, where they are being maintained by gains which have been reported for the first three weeks of the year just started upon.

OUTLAYS FOR RAILWAY IMPROVEMENTS.

Indisputably, it is a fact that the railroads of the country—properly speaking, those of any importance—are contemplating making heavy outlays for construction and improvements. Improvements rather than new track-laying will doubtless absorb most of the money to be expended; but what is somewhat interesting—amusing, too—is to note with what circumstantiality a "prominent director" or an "official high up" somewhere comes out in an interview with regard to what is on the cards for his particular company. After that, equal interest and amusement—may be gained from unofficial estimates formed as to sums actually to be spent within an actually given time. As to the time, 1903 is young, so "the present year" goes splendidly. Amounts—well, amounts do vary. For a road of moderate calibre, for instance, anywhere from $5,000,000 to $10,000,000 is found to suit the case. It would probably suit the companies whose names are lacked to the amounts, if they could get hold of such a snug little sum for improvement purposes with the ease and facility accredited to them. But when it comes to the heavy weights—say the Pennsylvania—why, then, there is room for expansion. No pleayune sum for such a road as that. Thirty millions, fifty millions—according to the temperament of the estimator, prospective outlays have run well up to nine figures, and then, no doubt, the plunger for the highest sum considered the company had been done scant justice.

Facts in each case there certainly are, but they are not posted up on Wall Street nor anywhere else. And when it comes to putting "prospective outlays" for 1903 into so many dollars and cents it may be doubted whether prominent Directors, Presidents, or any of the directorial or managerial outfit could make an approximate figure. Earnings are called upon where possible, the hat goes round for capital, resources are thus made available, and the next thing is the draft upon these as occasion requires. The company with small surplus and little credit must content itself by going slow, must put up with grades which cannot be reduced until cash is a more flush commodity, must likewise submit to operating around curves removable only by the power of money, and rejoice as well as it can over small capacity cars and engines. Other concerns can undertake such improvements, and luckily these are in the majority. By and by, when the tide of prosperity may have turned, they will be all the better able to meet the terms offered by slower business and decreased gross earnings. While they can they will spend liberally, and the more improvement work done the better in the end. But as to whether this company will put out five million dollars or ten million dollars, that company fifty millions or one hundred millions; whether the combined companies are to spend so much, or so much, time will probably have to speak with the proper authority.

FACTORS IN CAPITALIZATION PER MILE.

Recent compilations of railroad statistics, official and otherwise, have shown that railroad capitalization per mile for the late year ran to the highest average recorded.

It is something of a wonder that the Wall Street mind has been so little disturbed by this development, prone as it has been lately to catch at all such features to make them appear important (even if they are not so) from the bearish point of view. But Wall Street has had money on the brain, and has had little inclination to investigate in many directions where later on it will be a most diligent searcher for truths—and fiction. As to the feature in question, a little inquiry may be found to serve the useful purpose of allaying any fear that by adding to their capitalization the railroads have therefore been developing any grave condition, incurring risk, or running into danger that should and might have been avoided.

It is possible that averages such as those alluded to are capable of conveying a good deal of misinformation to the superficial observer. They can certainly be entwined with almost any discussion whose object would be to show that there had been for some time past a tendency to stock watering, to overcapitalization, to putting a burden upon the shipping public, and of course to commit all those sins at which railroad officials are popularly believed to be such adepts. On the face of it the railroads of the country, according to the Inter-State Commerce Commission, stood for $61,531 per mile of stock and funded debt for the fiscal year 1901, only $41 per mile more than for 1900, but showing $2,525 increase in ten years, and an unprecedented average figure. A certain value of course is to be attached to a bare exhibit of capital per mile, but the true meaning and importance of any such statement is only to be arrived at by consideration of changes which have been in progress in conjunction with changes having a bearing upon actual value of plant. With traffic per mile the case would be different, while gross earnings, with due allowance made for rate fluctuations, would indicate the course followed by the country's producing, distributing, and consuming energies. These will reflect with comparative accuracy the value or otherwise of additions made to length of road in a given period, and constitute a fairly safe basis for conclusions regarding contraction or expansion in the forces which go to a large extent to make up our National activities.

But when it comes to measuring results to capital by miles on which that capital rests, questions arise which are not to be answered hastily. The factors entering into the problem are numerous, and not all on the surface. Conceivably a railroad of any importance could easily raise and spend $20,000,000, say, and not add a single foot to the length of its first track, upon which there would necessarily be a sharp rise in the average debt liability per mile. The Pennsylvania, for instance, has within the past few days reported that its officials are looking for $50,000,000 for sundry improvements to that system. There is little doubt that new first track is about the smallest consideration in connection with this demand. How large the effect to be produced on the "average capital per mile" is therefore apparent at a glance. A mile or two may be added by this company to its length of line by the construction of the tunnel to connect the system with New York. But, again, at what effect on the average?

Take another instance. The Erie has lately done its share to raise average capital per mile by getting further interest in coal properties. Note, for example, that in this case—which is only typical of many—capital per mile covers a large fleet of tugs, car floats, barges, and other floating equipment, including ferryboats and steamers for lake traffic. Also that it covers extensive and expensive terminals and terminal property, freight yards in New York City, where real estate is not donated to enterprising railroads; warehouses, and the already spoken of coal lands, to say nothing of securities owned of subsidiary companies.

What the railroads are constantly compelled to do to keep up with the growth of business is not so much the extension of branch lines or feeders as it is the adding of a second track in order that train schedules may be increased, and in the laying down of more yard track and sidings every year, that traffic generally may be handled with more facility. Here is a fragment from the 1901 record of the many changes which took place in railroad matters:

	1900. Miles.	1901. Miles.	Increase. Miles.
Single track	192,556.02	195,561.92	3,005.90
Second track	12,181.48	12,848.42	666.94
Third track	1,094.46	1,153.96	59.49
Fourth track	829.29	876.13	46.84
Yard track and sidings	52,153.02	54,914.86	2,761.84
Total	258,764.30	265,352.29	6,587.99

The single-track figures stand for railroad mileage in active operation, and vary somewhat, but to only a trifling extent, from actual length of road in existence. Apparently, too, they vary a little from the exact mileage on which capital is figured out, as this, for example, for 1901 would be indicated by approximately 190,000 miles, according to the volume of total capital recorded, $11,638,147,001, from which the average of $61,531 per mile is drawn. The single track figures, however, may be taken to serve the present purpose, which is more particularly to show tracks additional to first tracks, this being possible only by adopting the official tabulation in which track in active operation is expressed.

Note, then, that while in 1901 a round 3,000 miles were joined to already existing single track in operation, there were 694 miles of second tracks brought into service, 100 miles or more of third and fourth track, and no less than 2,762 miles of yard track and sidings. Track-laying, therefore, broadly speaking, was 3,562 miles as to construction, which comes out of capital, but does not receive recognition in capital calculations, or more than the actual increase in first track. The value of this improvement to property is obvious at sight. It cannot be contested, for the admitted fact is that it is the kind of work which is not undertaken until the need for it has arisen or is demonstrated. New mileage may be built—has been built more than once—for which no legitimate excuse has been forthcoming for a long time subsequent to its being operated; but track additional to that already being overworked is quite another matter, as is also the increase in yard accommodations for cars and engines. So great has been the recent pressure upon railroad plant that the increase in the latter has been much more rapid than formerly, albeit in the past ten years a generous addition has been made to tracks other than what may be called traffic-getting lines. Thus between 1891 and 1901 these increases took place in single tracks, supplementary track, and all tracks.

YEAR.	Single Track. Miles.	Single Track. Increase.	Other Tracks & Sidings. Miles.	Other Tracks & Sidings. Increase.	Total, All Tracks. Miles.	Total, All Tracks. Increase.

1892	162,397.30

THE FINANCIAL MARKETS

Money nominal; 4 per cent. on call.

Stocks firm.

There was no development yesterday calculated to cause depression and much in the general situation that might naturally inspire confidence, but the stagnation in the stock market continued. The bank statement was favorable, but failed to impart any activity to the closing minutes of the market. It reported a large gain in loans, but not so large as might have been expected in view of the great Pennsylvania loan. The increase in cash was, however, so heavy that it counterbalanced the increase in liabilities, and the net result is another addition to the surplus, which is now larger than in the corresponding periods the past two years.

The effect of the hitch in the Venezuelan negotiations seems to be infinitesimal, and if anything is required to restore confidence in the attitude of Germany toward this country it may be found in the reported utterances of the new German Ambassador, who, in the most unequivocal language, states that the Monroe Doctrine is established beyond dispute.

The only conspicuous feature of the market yesterday was Delaware and Hudson, which enjoyed a notable advance. This was unexplained, except by the expectation of a very favorable December statement of earnings, in keeping with the recent statements of Erie and Reading. No one disputes the fact that the anthracite coal roads have made immense earnings since the strike ended, and there seems a good prospect of a continuance of their prosperity the rest of the year. The disturbance caused Friday by the latest reports of labor trouble on the Union Pacific seemed to have little effect yesterday and there is no expectation of a general strike on the system. The market, though very sluggish, held fairly firm, but gave no sign of leaving its present dead level.

MONEY AND EXCHANGE.

Time money, 4¾@5 per cent. for sixty days to four months and 5 per cent. for five and six months.

Mercantile paper rates, 5@5½ per cent. for sixty to ninety days' indorsed bills receivable, 5¼@5¾ per cent. for choice four to six months' single names, and 6 per cent. for others.

Clearing House statement: Exchanges, $264,706,948; balances, $24,977,949; Sub-Treasury credit balances, $2,684,357.

Money on call in London, 3@4 per cent.; rate of discount in the open market, 3 5-16 per cent. for short and 3 5-16@3⅜ per cent. for three months' bills.

Foreign exchange was dull. Posted rates were $4.84½ for sixty days and $4.87½ for demand. Rates for actual business were: Sixty days, $4.83¾@$4.88⅞; demand, $4.86⅞; cables, $4.87½; commercial bills, $4.82¾@$4.83¾.

Commercial bills were quoted as follows: Francs, 5.18¾ less 1-16 and 5.16¼ less 1-16; reichsmarks, 94 11-16 and 95; guilders, 39 15-16 and 40⅛.

Exchange on New York at domestic centres: Chicago—Par. Boston—5c premium. New Orleans—10c discount; bank, $1 premium. Charleston—Buying, 1-16c discount; selling, 1-16c premium. Savannah—Buying, ⅛c discount; selling, par. San Francisco—Sight, 12½c; telegraphic, 15c premium. St. Louis—10c discount @ par. Cincinnati—10c premium. Pittsburg—25@35c premium. Louisville—Par.

SOME GENERAL ISSUES.

Practically the only feature of the market yesterday was Delaware and Hudson, whose rise of nearly 4 points was on a continuation of the same kind of buying that has been in evidence for some days. There was absolutely no news to explain the advance except the talk that the forthcoming December statement of earnings will be a record breaker. The old story of a probable transfer of control of the system was revived, but found few believers.

In Union Pacific and Southern Pacific there was a cessation of the selling which had set in on the day previous, following the suggestions that as a result of the disagreement at the Omaha Union Pacific conference a strike on all the Harriman properties might ensue. In official quarters here talk of a general strike is ridiculed, it being pointed out that the present strike has been on over six months and that the other employes of the system have lately received increases in wages and are perfectly satisfied. Private advices from Omaha during the day were that the Brotherhood of Trainmen and Engineers will not uphold the strikers in their demand for the abolition of piecework and will refuse to make it a union matter.

Professional pressure was again brought to bear on Pennsylvania and Metropolitan, but no long stock was dislodged.

BIG SALE OF COPPER ABROAD.

It was reported in Wall Street yesterday that some large sales of copper have in the last week or two been made abroad by some of the United States companies, and at prices somewhat above those ruling here. One estimate put the total thus disposed of at 10,000,000 pounds, the selling agent being the United Metals Company.

At the offices of the company a representative said:

"Such a sale (of 10,000,000 pounds) would not be unusual. While we are not discussing our business it would not be a bad guess to say that the sale was actually made.

"The copper trade situation is steadily improving, with a first-class demand for the metal. The outlook is certainly encouraging."

NORTHERN PACIFIC DIVIDEND.

As had been generally expected, the Directors of the Northern Pacific, at their meeting yesterday, declared an extra dividend of one-half of 1 per cent. in addition to the regular quarterly dividend of 1½ per cent.

This extra dividend will inure to the benefit of the Northern Securities Company, which controls the Northern Pacific.

PENNSYLVANIA CONVERTIBLES.

Announcement was made yesterday that Pennsylvania Directors have adopted a resolution permitting holders of the convertible bonds to convert their bonds into stock at the rate of $70 per share between March 16 and April 4, 1903.

This, it is stated, does not of course impale the right of the convertible bondholders to convert their bonds after May 1, 1904. Those who do not take advantage of the period of conversion this year can do so next year after May 1.

OUTSIDE SECURITIES.

Transactions in the outside market yesterday were on a small scale, but advances in several issues were noted. American Writing Paper preferred, Havana Tobacco common, the International Mercantile Marine stocks, National Enameling common, and New York and Hoboken Ferry 5s were among the issues which showed greater strength, several of them advancing considerably, particularly Havana Tobacco, which gained 1½ points, and the New York and Hoboken bonds, which sold up to 108, a net gain of 1¼ points. The copper group was again the most active and strongest part of the list, Tennessee Copper and British Columbia Copper being the active stocks. Northern Securities were stronger, selling up to 113, later reacting to 112½, and closing the day at 112¾, a gain of a quarter of a point.

***

Tennessee Corran still further advanced to 27 on the same buying which caused the 7¼ point gain on Friday. The opening was at 24, a loss of 1 point, and a further loss of a point occurred, after which the stocks rose steadily to 27, but toward the close it reacted half a point, to 26⅞. The day's advance netted a gain of 1½ points on transactions which amounted to close to 23,000 shares. The total net gain of the week amounted to 9 points in trading in some 85,000 shares, of which nearly 76,000 were traded in on Friday and Saturday. British Columbia Copper was quite actively traded in, and advanced to 6⅝ on transactions of about 7,000 shares. At the close of the market the price receded to 7⅛, a net gain for the day of 1⅛ points.

***

The principal transactions reported in the outside market yesterday, with the high, low, and last prices, were as follows:

TREASURY BALANCES.

WASHINGTON, Jan. 31.—To-day's statement of Treasury balances in the general fund, exclusive of the $150,000,000 gold reserve in the Division of Redemption, shows:

Available cash balance	$215,032,573
Gold	97,698,320
Silver	17,498,297
United States notes	8,651,338
Treasury notes of 1890	32,013
National bank notes	21,163,712
Total receipts this day	2,111,520
Total receipts this month	46,988,527
Total receipts this year	384,620,786
Total expenditures this day	1,728,000
Total expend(ures this month	42,244,079
Total expenditures this year	304,467,571
Deposits in National banks	150,025,037

The condition of the Treasury, Divisions of Issue and Redemption, at the beginning of business to-day, was as follows:

RESERVE FUND.

Gold coin and bullion	$150,000,000

TRUST FUNDS, DIVISION OF REDEMPTION.

Gold coin	$326,021,000
Silver dollars	465,297,000
Silver dollars of 1890	963,949
Silver bullion of 1890	21,990,033
Total	$803,871,000

DIVISION OF ISSUE.

Gold certificates outstanding	$326,021,000
Silver certificates outstanding	465,297,000
Treasury notes outstanding	32,963,000
Total	$826,871,000

GENERAL FUND.

Gold coin and bullion	$73,152,800
Gold certificates	22,031,320
Silver coin and bullion	9,005,800

STATUS OF NEW YORK CITY NON-MEMBER BANKS.

(Specially Compiled by The New York Times.)

The following is the statement in detail for the week ended Jan. 31, of a majority of the banks not members of the Clearing House Association, but which clear through some of its members, the figures having been obtained direct from the banks by The New York Times:

Banks.	Capital.	Loans.	Specie.	Legals.	Deposits with Clearing House Agent.	Deposits with other Banks and Trust Companies.	Net Deposits.
N. Y. CITY, Borough of Manhattan.							
Century	$100,000	$520,300.00	$6,500.00	$15,000	$24,000.00	.....	$226,500.00

Letters to The Editor of The Times

BAD MANNERS OF SAVINGS BANK CLERKS.

To the Editor of The New York Times:

As a man of sense or sensibility has been trying to get a little money out of one of our savings banks he is apt to ask himself the question whether it would not be worth while to forfeit his whole account.

It is really fearsome, this ordeal which the depositor has to pass through. Unless he be familiar to the gentleman behind the counter he is treated as a suspect from the start, and the way questions are fired at him is enough to make his blood freeze or boil according to his temperament.

Where do you live? What do you do? When were you born? Who was your father? Who was your mother? How many brothers have you? How many sisters? Any aunts or uncles? Are you married or single? &c.,

These are a sample of the interesting questions that are propounded, not quietly and politely, but in loud, hectoring tones, as if one were being cross-examined on a criminal charge. And if the unfortunate victim should try to keep the sacred facts of his life from becoming public property he is told to "Speak louder!" or "Speak up!"

Now, I do not say that all savings banks are alike, but I have had experience of three of them, and I am not exactly alone in all such as he have described. It is very likely that the clerks in those institutions have fallen into their shocking habit of callousness and rudeness from coming in contact with so many ignorant foreigners, but they surely ought to learn to discriminate, or their superiors ought to teach them.

And why should it be necessary to rehearse one's family history within the hearing of every one with vulgar, curious ears for the most part? Why not have a booth (opening at both ends) in line with the teller's box where one can make his confession, so to speak, and pass out? Oh, how much better they manage these things in France! But we are learning—learning that it is not necessary to be rude in order to be strong.

STRINA.

New York, Jan. 30, 1903.

ENGLISHMEN IN AMERICA.

To the Editor of The New York Times:

As you intimate in your editorial in to-day's paper, it is quite just that a stranger who cavils at everything he sees and pulls down the institutions of the country generally should be paid back in his own coin, and be invited to go home as soon as possible, but that does not justify those who make it unpleasant for every Briton—and because he is a Briton, regardless of individual behavior. My experience of fellow-countrymen here is that they are usually careful not to offend American susceptibilities, nor to fail in giving praise to anything that strikes them as praiseworthy; and I am glad to say that there is a great deal in this country which one can honestly admire. If Britishers acted otherwise they would scarcely be tolerated in business, and most of them succeed pretty well in business in the United States. It is hard if, from the moment when he walks down the gangplank, the British, or any other immigrant, were obliged to praise everything he saw, and to express disapproval of nothing. No Englishman does it in his own country, or in any other country, that I know of, as I am aware, and immigrants of other nationalities and even native-born Americans do not do it here.

Having all this aside, you give no reason why your newspapers are so consistently anti-British. You cannot say that British papers are anti-American, and that it is a case of tit-for-tat, as you say in the other connection, for the English press is full of friendship for the United States, with one or two exceptions.

But you are right—we have no redress, and must get along and endure it as best we can, now that we are settled here. However, our epistolary efforts will not be altogether in vain if perchance they meet the eyes of some intending emigrants from Great Britain, and cause them to stop and consider whether it would not be better to make their new homes in some part of their own empire, rather than in these United States, where the public school history books appear to have been prepared with so much care.

I might regret not having done so myself were it not that I have found here somewhere a British wife, even the most hypercritical of Britons can appreciate—a good American wife.

KINARLA.

Rome, N. Y., Jan. 25, 1903.

ENGLISHMEN AT HOME HERE.

To the Editor of The New York Times:

If "An Old Londoner" read "with interest" certain letters to which he refers, I have read with indignation the one from him.

I have resided in the United States twenty-seven years, half the time in the South and half in the North. During the whole period I have been engaged in the active pursuit of my profession, which has brought me into contact with thousands of the people, of all ranks and descriptions, and I have yet to hear, from the mouth of any native-born American, the first reference to anything British in terms of "disapproval or contempt."

Furthermore, there are no people on earth who more easily define the maxim, English, men feel at home among them, and certainly none who so thoroughly succeed. We are treated, as a rule, infinitely better than we deserve; for we are largely supercilious and maladroit in our speech and ways, and frequently offend those to whom we come for our own pleasure or profit.

I am English to the core, and love England as warmly as ever; but my affection for the American people forms a strong third in love, which is, after all, but an inadequate return for the affectionate greeting extended to me and mine from the beginning, and continued unceasingly and more and more warmly ever since.

G. W. DUMBELL.

Goshen, N. Y., Jan. 26, 1903.

TACT IN THIS COUNTRY AND IN ENGLAND.

To the Editor of The New York Times:

"Tact is the great need of the race," Mr. Bates has, in your issue of to-day, put his finger upon one of the main causes of the absence of a thorough understanding between Englishmen and Americans. Of the two, Englishmen (unless they live in official or diplomatic circles) are more deficient than Americans in this admirable quality. The Englishman who goes to the opera in a tweed suit and knickerbockers may exist more in the imagination of a Parisian caricaturist than in reality. But Albion's sons, when they experience discourtesy in a foreign country, are in nineteen cases out of twenty but receiving what is due to their own folly. They will not take the trouble to ascertain the altered point of view from which their hosts look at the world.

"Je vous demande pardon, Monsieur," said a Frenchman, with a charming smile, to my hearing yesterday, when a gentleman arrived an hour late at a business appointment made by himself. It is this delicacy of thought and behavior which places the Frenchman at an advantage in most of the superficial relations of life.

Two factors which disturb many English visitors or residents in the States are the cooking and the service. I speak not of first-class restaurants, nor of private dwelling houses, but of otherwise good apartment houses. There every dish seems to have been cooked in the same vessel. At breakfast the eggs are never really "new laid," the fish is not carefully prepared, the toast is tough and indigestible.

Luncheon and dinner at an apartment house become almost impossible meals to an Englishman, who has been accustomed to good though not necessarily expensive cooking. There must be something wrong here. Is it that the typical American is in different to the legitimate delights of the palate and that easy action of digestion which accompanies the eating of food properly cooked? I do not believe it. The food products here, with the exception perhaps of the mutton, (and that only in point of view of flavor,) are as good as any in the Old World. The fault lies in the kitchen. This is why the restaurants at a certain part of Fifth Avenue are full to overflowing every night.

The service at an apartment house is no better than the cuisine. A meal is ordered and one has to wait an inordinate time. In Paris delicious hors d'œuvres are at once placed before the hungry customer, whether he has ordered them or not; with these, and he will, be trifles until his soup or fish appears. Here one waits, hungry and perhaps impatient. When the waiter, who is often an Irishman, approaches, it is generally in sadness and silence. His spirit is evidently heavy-laden, although his wages are threefold what they would be at a hotel in Dublin or Belfast. A handsome tip is handed him; he takes it, often without a word of thanks. It is his due.

But those of us who have been born and bred within the laws of courtesy miss sorely the delightful "Merci, Monsieur" of the French waiter, or the respectful acknowledgment of a good English servant.

On the other hand, a foreigner cannot but be agreeably impressed by the unfailing good temper with which passengers allow themselves to be pushed about by each other in crowded cars. The push given is seldom violent, and every one seems agreed to act in accordance with the general interest. Even the conductor, when he wishes to pass a standing passenger, is not rough, but gently slides himself to his destination in the car.

Personally, I prefer not to be pushed at all, and I have not contracted the habit of pushing people in public streets or vehicles. But here it is unavoidable, and not only does it arouse no resentment on the part of a sensible visitor, but he sees that it is done in the interests of every one in the car.

C. D.

New York, Jan. 30, 1903.

QUICKER STOPS ON ELEVATED.

To the Editor of The New York Times:

Much has been said about different ways for improving the service of the elevated roads. Some of the suggestions have been good, and I think the one for a loop at South Ferry excellent. Please permit me to make one.

At present the station platforms are just a few feet (some five or ten) longer than is absolutely necessary for the six-car trains. Since they are practically no longer than is absolutely needed, much time is wasted by the motormen in bringing the trains to a stop at the proper place. Now, if the platforms were from 50 to 100 feet longer, it would be much easier to run the trains up at a greater speed and stop them with a constantly decreasing acceleration, thus avoiding the jerky motion so common now. For, since the platform is longer, the motorman will not be so limited in stopping at just such a spot.

There is another advantage—that is the saving of time, for, if there is no time lost in bringing the train to a stop, as at present, there must be a gain. Suppose there be a gain of four seconds at each station. On the Second, Third, Sixth, and Ninth Avenue roads there are about twenty-five, forty, thirty, and thirty stations respectively. This means a gain of about two minutes on the Second, Sixth, and Ninth and three minutes on the Third Ave. line. This gain for each trip is made not by increasing the speed, but by lessening the time required to stop. If there were more than four seconds saved at each station the gain would be in proportion.

The cost of this would be comparatively small and the advantage would be well worth the extra cost.

GEORGE H. HOOPER, Jr.

New York, Jan. 28, 1903.

MUNICIPAL OWNERSHIP QUESTIONS.

To the Editor of The New York Times:

I have before me a copy of Bill No. 128, introduced in the Assembly on Jan. 20 by Mr. Miller of the Twenty-first Assembly District, Brooklyn, read once, and referred to the Committee on Affairs of Cities.

The bill provides that at the next election, in November, two specific questions shall be submitted to the voters of New York City:

"Do you favor a policy of public ownership of municipal transportation lines?"

"Do you favor a policy of public ownership of municipal gas and electric lighting plants?"

It also provides that, in case one or both of these questions should be answered by a majority of the voters in the affirmative, the Mayor shall within a month of the canvass of the vote appoint a non-partisan Committee of Investigation of Ways and Means to carry this principle into operation, the committee to consist of five citizens, who shall signify to the Mayor that they are not hostile to the principle of public ownership. This committee in the course of its investigation shall hold at least two public hearings on either or each of the questions involved, and shall make their report with such recommendations as they may deem advisable, to the Mayor and the public within five months of their appointment.

It will be observed that the demands of this bill are very mild indeed, but it seems to me that a bill of such startling and far-reaching possibilities should receive more attention at the hands of the press than it has received. It is not well that it should be quietly strangled in committee, as it assuredly will be if the powerful interests involved have anything to say about it.

On the contrary, it is well that the sentiment of the people on such a momentous question should be very carefully canvassed and ascertained. A great deal of loose talk has for a long time been current upon this very subject, and no one knows how large a portion of our people desire public ownership of public utilities.

One of the good results to be looked for from the agitation of this question would be the immediate improvement of our municipal transportation. These companies have been given valuable privileges that they might give the public the service it desires. They have been busy of late inventing excuses to show why they are unable to give adequate service. It will be no more than natural if, seeing the public seriously contemplating taking this service into its own hands, these companies suddenly become imbued with an intense desire to show cause why they should be allowed to retain their privileges.

At any rate, let no moves be made in the dark in this matter. Let the light of publicity beat upon this question of public ownership, and mistakes will be less likely to be made.

PHIL OSOPHY.

Brooklyn, Jan. 27, 1903.

EX-SENATOR FORD ON HIS BILL.

To the Editor of The New York Times:

Your editorial comment of this morning on a supposed bill drafted by me and affecting the Rapid Transit Commission is evidently based on erroneous information. You speak of it as proposing to add six members to the commission. No such suggestion has ever been made by me, although a report to that effect appeared the other morning in one of the newspapers. On the contrary, I deem it of the highest importance that the continuity of the commission and its work be not interfered with, and particularly that no change be made that would complicate in any way the execution of existing construction or operating contracts.

Ever since the awarding of the McDonald contract, which divested the city of control of its fifty-million-dollar railroad for seventy-five years, I have been strongly of the opinion that the Rapid Transit act, which compels such exclusion of local authority, should be amended so as to preserve to the city a reasonable measure of control over operation and character of service. The bill which I have drafted accomplishes this without in any way disarranging or complicating the relationship of the commission to existing contracts. The measure provides:

1. That the commission shall not be obliged to let a long-term contract for operation at the same time and with the same person who takes the construction contract, but that the contract for construction alone be let in the first instance.

2. That the city have power to contract for the operation of the roads when built, or to operate them itself, as shall seem most practical and advantageous at the time.

The city is about to expend vast sums in constructing a subway system, and it would seem to be wise foresight to provide that the city should be put in a position to dictate the manner in which the system is to be managed and operated.

The policy of seventy-five-year contracts for operation will place the new roads as far beyond the power of the local authorities to enforce proper service from them as the elevated and Metropolitan are. That will mean strap riding for ourselves, our children, and our children's children.

Incidentally, I might add that I cannot look at the Rapid Transit act without a feeling that it is a disgrace to our citizenship that such an anomalous body should exist in a self-governing community. The original Commissioners were named in the act creating the board, and they were authorized to name their successors. They are responsible to no local authority and possess compulsory power over the Board of Estimate and Apportionment and the Controller in respect of the authorization and issue of bonds. I am strongly in favor of subjecting the commission to some degree of accountability to the people whose money they expend. This ought to be done, but in such a way as not to embarrass the work in progress. But whether it is done or not, every interest of the city demands the other changes in the Rapid Transit act which I have suggested.

JOHN FORD.

New York, Jan. 30, 1903.

THE CHURCH AND THE LAW.

To the Editor of The New York Times:

A perusal of your editorial article yesterday containing the views of Bishop Burgess on the change of name of the Protestant Episcopal Church leads one to wish that Bishops would confine themselves to giving opinions about questions of theology, and would leave questions of law to the lawyers. One of his chief objections to the change of name was that property and bequests might be lost which were intended to be left to the Protestant Episcopal Church, but which would be diverted to some other Church, or be lost altogether by reason of the change of name. The following opinion on this subject by John H. Stiness, LL.D., Chief Justice of the Supreme Court of Rhode Island, seems to settle this question. It was written for The Living Church, and appeared in its issue of Aug. 30, 1901:

"In reply to your inquiry whether the Church might suffer loss of property, in case of a change in its name, is somewhat embarrassing, because the answer is so obvious.

A change of name could not affect its property rights. A person, state or nation, does not forfeit property, nor lose bequests, by such a change. It often happens that a person does not choose to retain his legal name. Even Presidents of the United States, or others who have been in high offices in the Nation, have made changes in their names, of their own accord, but no one thought of its affecting any of their personal or property interests. Civil and charitable corporations, religious bodies, and parishes, are constantly doing the same thing without loss.

A corporation is a person, created by law, with the same general privileges as an individual. Property is owned by a person, not by a name. The office of the name is simply to identify the person. When the person is known, rights follow, whether there be a change of name, a mistake of name, or no name at all.

While the law is clear with regard to the change of name of a corporation, it is to be noted that neither the General Convention, nor the body known as the Protestant Episcopal Church, is a corporation. It is a voluntary association, sometimes classed as a quasi corporation. It holds no property in its own name. Gifts to it are made to "The Domestic and Foreign Missionary Society," "The General Theological Seminary," "The American Church Building Fund Commission," and other Boards of Trustees, which are incorporated. Hence any change by the General Convention could not affect these several corporations or any property held by or coming to them. In case of a change of the title of the Church, naturally a corresponding change would be asked for by the related corporations, which would be granted on the asking by the Legislatures that gave the charters. But with or without such action there would be no peril of loss, as appears from the following citations: Perry, Law of Trusts, 5th Ed., 728; Story's Eq. Juris., §1,169.

I therefore leave it for others to show how there can be a possibility of loss. I can see no such possibility.

Against this legal opinion with authorities it people ought not to listen to the dictum of even a Bishop!

LAWYER.

New York, Jan. 26, 1903.

COMPENSATION FOR JURY DUTY.

I have read with much interest the letters of some of your correspondents on the present jury system which prevails in New York, and the need of a speedy reform. Having just finished a term of penance as a juror in one of our Supreme Courts, and having received the magnificent sum of $4 for my services, I can fully agree with the opinions expressed by your former correspondents.

Why there should be so much difference in the remuneration of jurors in the different courts I cannot understand. It makes no difference to the juror as far as his time is concerned, yet in some courts he is only paid $1 for each case he is impaneled on, while in other courts he is paid $2 a day, whether he is impaneled or not.

Certainly it is a patriotic duty, and there are many pleasant and interesting incidents attached to it, as well as some that are the reverse of pleasant or agreeable, yet if the juror is so important a factor in the administration of justice, and if he has to give up his business for a month or two weeks, and be under considerable extra expence to perform this patriotic duty, he ought to receive a fair and reasonable compensation, especially when so much is allowed for the salaries of Judges and the fees of lawyers.

To form a Jury Reform League, as your correspondent suggests, would, I fear, be of little use; but if every man who is called to serve on the jury would call the attention of the Assemblyman and State Senator of his district to the matter, and if THE NEW YORK TIMES and other leading newspapers would strongly urge a reform in the present law, then we might look forward with hope for a better and more satisfactory system in the near future. Some great philosopher has said: "Let justice be done if the heavens should fall," but, in the name of justice we say, do not put all the expence of meting out justice on the patriotic citizen who is willing to serve his country as a juror whenever he is called upon to do so.

M. R. BIRNIE.

New York, Jan. 31, 1903.

THE PREFERRED JUROR.

To the Editor of The New York Times:

In two letters to THE TIMES of last week the writers complain of the non-enforcement of the new law which requires the Commissioner of Jurors to put those who did not register in the last election on the preferred jury list. They claim to have done their duty in voting at the last election and do not deserve the punishment of serving on the jury while the non-voters are scot free of jury duty.

This conception of the jury as an onerous and odious duty to be shifted on the less worthy members of the community seems to be in harmony with the spirit and purpose of this new law. It suggests to us therefore to inquire into the moral status and wisdom of this law.

Our English ancestors, the first nation in Europe to introduce trial by jury, gloried in it, as in one of the great achievements of the liberty-loving Anglo-Saxon race. They considered it not merely as right and duty, but as the highest privilege of the English freeholder. How they must now turn in their graves and wonder at the wisdom of the legislator of the twentieth century, turning the most precious and proudest Anglo-Saxon inheritance into a punitive instrument for civic evildoers.

This law is also a perversion of justice and of the basic principle underlying the jury system, in that it makes those who neglect their civic duties the preferred persons to sit in judgement of the life and property of the people. The people have the right to ask to be judged by the highest type, intellectually and morally, of citizenship in the community.

E. LANDAN.

New York, Jan. 27, 1903.

RIGHTS OF THE NEGRO.

To the Editor of The New York Times:

The disfranchisement of the negro in several of the Southern States, the Lily White movement, and the advancement of the colored race, in some individual cases, to political position have unfortunately aroused the old spirit of sectionalism which the Spanish-American war had done so much to allay. It is the old, old story of political supremacy. The education of the public conscience is, to my mind, the only solution of many of the anachronisms and anomalies of our much-vaunted civilization. The negro is a potent factor in the agricultural and industrial development of the Southland. Why, then, should he not be given every opportunity for increased efficiency in the discharge of duty? Booker T. Washington is immortalizing himself by his efforts to emancipate his race from intellectual bondage.

I am heartily in sympathy with the attitude assumed by President Roosevelt in appointing the colored man to political office. Such a movement may militate against Southern aristocratic pride, yet in this land of liberty it is the logic of the law of human progress. If the negro is morally and intellectually qualified for political honor, why should his color debar him from the exercise of such duties? The Anglo-Saxon race will dominate. It carries the burden of responsibility in protecting and encouraging the inferior race. Human society has always been, from "time immemorial," differentiated into classes, and always will be. The political and social equality of the white and black races at the South are false alarms. "In this land of the free and home of the brave" let every man have a living chance commensurate with his moral and intellectual capacity.

This I apprehend is the keynote of our President's Southern policy; and it is in consonance with the true spirit of American institutions.

A TIMES READER.

New York, Jan. 30, 1903.

THE UNWRITTEN LAW IN THE SOUTH.

To the Editor of The New York Times:

Please permit me to explain some matters about the South as to which you have confessed editorially that they are beyond your comprehension.

You state in an editorial that you cannot understand why citizens of Texas invite Booker T. Washington to deliver an address before them while citizens of Indianola, Miss., object to their mail being handled by a colored woman. An all-sufficient explanation is that Prof. Washington is recognized in the South as an intellectual man, a student, and one whose opinions are valued and respected. He was in a similar way chosen to deliver an address on the opening of the Atlanta Exposition. But this is not all. His lecture or address lasts but an hour or two. They do not listen to him every day for several years. They would draw the color line even at Prof. Washington if this were likely to happen. The colored Postmistress on the other hand was a fixture, to be encountered daily, year after year. The citizens in peaceful mass meeting requested her to resign, and she complied. No unlawful acts have been shown to have occurred or have been threatened.

There is an unwritten law between the Anglo-Saxon and the negro races—stronger in its effect in the South because instances necessarily arise there with greater frequency. President Roosevelt is trying to ignore it as did President McKinley when he ordered that a colored paymaster should be sent to pay off the Texas volunteers for the war with Spain. And yet they both knew that there are other unwritten laws which they dare not ignore, such as the law against a third Presidential term, that forbidding either a Roman Catholic or a Hebrew from being nominated for the Presidency—and others which need not be cited. They simply showed extraordinary lack of tact and common sense in that they insisted on the extreme enforcement of the law, which Mayor Low says is the extreme of injustice. The written law says the President may ignore the prejudices of a community, but it is not always wise nor even just to do so.

As to the recent lynching in Louisiana, it is to be explained by the fact that it occurred in a sparsely settled, uneducated neighborhood and the victim had killed an officer in the act of performing his duty of arresting him. In South Carolina the murder usually occurs in the heart of a town of about 20,000 inhabitants, the site of the State University, and of many other institutions of learning. The murderer was protected by numberless safeguards due to modern civilization, that of public sentiment being most important.

It is a fact practically never mentioned in Northern newspapers that lynching in the South never occurs in cities or towns having even a moderate police force and that degree of education and civilization which is the universal rule at the North. Education is the lyncher's deadly foe in the South as elsewhere. And, besides, in Tillman's case it was felt that Gonzales's editorial exposure of his real character were an explanation of his brutal act, though without justification, since they had ceased when Tillman's defeat was assured in the September primaries. That Tillman's escape from punishment is anticipated proves nothing except that murderers go unwhipped of justice in the South as well as in the North, as witness the Fisk-Stokes affair.

D. H. H.

New York, Jan. 29, 1903.

THE PRESIDENT AND THE RACE PROBLEM.

To the Editor of The New York Times:

I am sorry not to see more general protest in the North against the Southern policy of the Administration. It is distinctly a policy of reaction—a retrograde movement—and must undo much of the good accomplished by the wiser and more practical methods of other Presidents.

That President Roosevelt's motive is the creditable one of doing justice to a class of American citizens who have been greatly wronged there can be no doubt, but motives alone count for very little unless they are accompanied by sound judgment, adaptation of means to ends, and intelligent study of the results of previous efforts to accomplish the same purpose. This practical judgment we certainly have a right to expect from the President and his advisers. They may do incalculable harm by the best motives—and sometimes a blunder is equivalent to a crime.

There is less excuse in this case than there would be if the course pursued was an untried one. It has been tested before, with only lamentable failure as the result. Is the President not capable of learning from the experience of the past? There is no doubt as to the fact that the negroes are unfairly treated. The problem is: How can this condition be remedied? Certainly not by renewing an experiment which has been thoroughly tried, and which resulted only in failure.

It seems an amazing thing that the President, an intelligent, practical man, as we have considered him, should be so blind to the lessons of our recent history as to think for a moment that the policy of arbitrary, outside interference, which was tried and abandoned by some of his predecessors, could possibly have any result but incalculable harm, even to the negroes themselves, not to speak of the interests of the country generally, which certainly are entitled to some degree of consideration.

It ought to be a definitely settled thing that the race problem cannot be solved from the White House. The more "strenuous" the effort to do it the more disastrous will be the failure.

President Roosevelt would do well to study the methods of that, we may almost say, inspired prophet of the negro race—Booker Washington—who, with wisdom beyond that of any white man, saw that nothing but failure could result from any course that would keep alive or increase the prejudices and animosities of the whites among whom the negroes must live; that social and political privileges must be kept in the background, for a time, and all efforts directed toward general development, industrial efficiency, and importance—a general uplifting, the result of which would inevitably be better relations with the superior race, as the superiority diminishes with the improvement in the negro character. Booker Washington's method is the only one that has the least possible chance of success.

The race problem must be solved where it exists—in the South—and there only, by gradual development, and the resulting changes in the relation of the two races. As the negroes grow more intelligent, more capable, more nearly on a plane of genuine equality with the whites—as that change progresses, it will be accompanied by corresponding changes in the attitude of the whites toward the negroes, in a generation or two the wide gulf will be bridged over, and finally the negroes will stand shoulder to shoulder with their white compatriots in all the essentials of citizenship.

But arbitrary interference of any kind will only set back the clock, reverse the wheels of progress, and protract for a long period the disabilities from which the negroes suffer. The course of the President, if it is continued, will rekindle the fires of hatred, which have seemed entirely extinguished, and revive all the bitter animosities which more than anything else stand in the way of better conditions for the colored race.

The experience of the Indianola Post mistress illustrates this. She was not molested, and she apparently gave satisfaction to the community, until President Roosevelt's course in other matters roused the slumbering animosity, which, under the wiser régime of President McKinley, had been entirely quiescent.

As to the appointment of negroes to important offices, they certainly should not be made contrary to the wishes of the community interested, and the reason given, that the negroes should be "recognized," is simply the old, sordid, narrow conception of our civil service, that an office is merely a reward for services rendered, or a bid for services desired—the wretched old spoils system, from which we hoped that President Roosevelt had risen to higher ground. That phase of the question has been quite fully treated editorially in THE TIMES, but the whole matter should be discussed "without fear or favor" through the North generally, as it is far more important than it seems to be considered.

J. R. GRIFFING.

New York, Jan. 28, 1903.

SALOONS AND CORPORATIONS.

To the Editor of The New York Times:

The patrons of saloons generally patronize those places for the want of more congenial surroundings. In some instances it may also be attributed to a discontent arising from a deranged nervous system, a disease, which corporations are daily inflicting upon thousands of clerks by compelling them to work with the methodical regularity of a flywheel. Not that they are unscrupulous about their employes' health, but that they have so systematised the manipulation of their clerical machinery that each is expected to accomplish so much with every tick of the clock.

This inevitably results in straining the nervous system to the breaking point, and incapacitates the victim from any desire to pursue intellectual pleasures; but instead, prepares him for that sensation of relief (injurious though it may be) which he finds in visiting saloons and partaking of the social glass.

Consider an individual poring for eight consecutive hours over a lot of dry and monotonous figures or names and you soon will come to the conclusion that he must have some variegated pastime to annihilate his moments of leisure. Saloons, cankerous and degrading as they are to the habitual frequenter of them, are resorts where overworked men congregate to enjoy an imaginary and ephemeral pleasure to act as a relief to the tremendous pressure their nervous systems are inhumanly called upon to withstand.

Tax any corporation employing hundreds of men, and nine out of every ten addicted to the use of intoxicants will inform you that their desire for the beverage began shortly after they entered the employment of such concerns. The writer has seen inebriety spread with astonishing rapidity among a horde of men employed by corporations who previous to the time of entering such employment had no desire for liquor. Drinking to excess is beastly, but the overworking of men in any branch of industry is the crime of the twentieth century demanding instant correction.

CLERK.

Jersey City, Jan. 28, 1903.

THE CASE OF COL. LYNCH.

To the Editor of The New York Times:

Let me, if you please, put in a word of protest as strenuous as it may be the custom of THE TIMES to permit, against the unfair, not to say unmerciful, summary of a notable case in the editorial in to-day's paper entitled "Col. Lynch's Treason." If what there appears were to be interpreted as the abiding attitude of THE TIMES on all grave questions of political concern, both at home and abroad, there would come, I fear, a serious shock to a large circle of readers who might learn thereafter to believe that the paper is "an organ," rather than the mouthpiece of an honest public sentiment. Look where one may the newspapers, with some decent exceptions, are guided or controlled by passion or partiality. THE TIMES has been generally believed to be one of the exceptions, but a few more editorials such as this one on Col. Arthur Lynch, M. P., would undermine its claim to this distinction with startling suddenness. The most rabid Tory paper in Great Britain could not comment with more unfeeling severity on the character and acts of this brave Irishman than what THE TIMES has seen fit to do. I question, indeed, whether what any one of them says will be found to be as severe or utterly wanting in chivalry, to say the least. The editorial declares that

> The defendant owes the result entirely to himself, and mainly, if not altogether, to his stupefying impudence. * * * He is probably not the only Irishman, by several hundreds, now in the United Kingdom who has borne arms for his country in the war, but he is the only one who has had the face to ask for the votes of British subjects on that account. For him to come back red-handed from the war in South Africa and run for Parliament on his record, and on the intention of taking an oath of allegiance if he won, was a paralyzing piece of presumption.

All that is lacking in this criticism is that it takes no account at all of the cause, of the idea, of which Col. Lynch is the embodiment. When this is considered, then all that Col. Lynch has done harmonizes entirely with that spirit of patriotic sacrifice in the early days of our own history which makes America in our time the happy abode of 80,000,000 freemen. What you call his "stupefying impudence" becomes in that case indomitable pluck, and his "paralyzing presumption" courage and resolution of the highest type. Col. Lynch didn't "ask for the votes of British subjects." There came no "thus" in his seeking, as it was quite natural they should, just as twenty-eight years ago the votes of another Irish constituency came to John Mitchel, also convicted of treason. Any one of 83 of the 103 Parliamentary constituencies in Ireland would have done the same for Col. Lynch as the Borough of Galway did. If they didn't, I should feel ashamed of them. If, therefore, Col. Lynch be guilty of "stupefying impudence" and "paralyzing presumption, there are in Ireland at this moment and outside of Ireland as well, vast armies of men, whose blood is akin to his, ready to make manifestation of the same pernicious activity which threatens to bring this brave soldier and true patriot to such a glorious and enviable doom.

With a brusqueness scarcely to be expected, you say, "Served him right!" Further, Col. Lynch is described as "slight stuff," and a man "not worth making a martyr of." And yet, with a sentence of death hanging over him, and the sneers of an English Judge about "toying with treason," which, unhappily, THE TIMES repeats, ringing in his ears, he stands, does this man, as an exponent of Ireland's protest against her greedy and inveterate foe? And, though he may not, in the opinion of some, be "worth making a martyr of," it is as certain as anything can be—if Col. Lynch is put to death—that the trouble in store for England will far outweigh any apparent present advantage accruing from so unfeelingly an act, for it will stir to the depths of a sea has not been dead of England in Ireland in a hundred years every son of the Gael from end to end of the world, insuring for generations to come that "posthumous political mischief" which has been a spur everywhere to every great effort for political liberty in a thousand years, but which, curiously enough, the article in question so greatly deplores.

Ireland's account with England dates back considerably. It did not begin yesterday; the interest continues piling up even to-day, and there is no present visible likelihood that it will be closed to-morrow. There has been much fighting and some progress made in the interim, but there remain many weighty blows to be dealt yet before all is serene, and dealt they will be, it may be surely asserted, whenever and wherever sympathizers with Ireland get a chance. The weapons which a race fighting for its liberty may favor at different stages of the campaign are many and varied. For the present, Col. Lynch and those of his countrymen who fought with him represent Ireland's protest against England. Outsiders may fail to see this, but Ireland's own sons see it, and that is sufficient.

It is the purest nonsense to talk about an Irishman committing treason against England. A man can commit treason only against his own country. For the great bulk of Irishmen, England is not alone a foreign country, but the most obnoxious of all foreign countries. There are persons known as Orangemen and other political hybrids to whom this would not apply, but they have no right to the name of Irishmen, though they make at times long amusing efforts to be classed as such. Ireland never has accepted the right of England to rule her, and as long as a remnant of the race survives, it is wholly unlikely that she ever will. Ireland's submission is a matter of expediency, not of loyalty, as the whole world knows long ago. Her sons give loud exclamations of joy where they may, and suppressed ones where they must, when discomfiture and disaster overtake England at home or abroad. Again and again the Irish members of the House of Commons cheered on the announcement of Boer victories. This was proper and patriotic, and they would be traitors to Ireland if they felt otherwise.

In fighting for these same Boers Col. Lynch represented a phase of that discontent, that smoldering hatred which finds ample justification in the history of the two countries. Never throughout all the age-long struggle has there been an individual incident more stirring or more suggestive than this. The sentence of death for high treason in England's capital, with not a friendly face to greet him in that crowded court, is, in the case of Col. Arthur Lynch, M. P., the apotheosis of a life of patriotic adventure as impressive in its way as the trial of Robert Emmet or the execution of Nathan Hale.

Hale was a traitor, and so, too, was Emmet a traitor. Those who signed the Declaration of Independence were rebels and traitors all—according to the nice definition of courtiers and Kings. A shaft piercing heavenward is raised to the arch-traitor of them all in the capital of our common country. It is honorable, not infamous, this term traitor in the case of the men whose courage and endurance brought forth this Republic. Why not in the case of Col. Arthur Lynch? For the reason simply that the cause for which he fought directly and the cause which, indirectly, he personified have both failed of success. When the freedom of Ireland is achieved men like Lynch will be acclaimed, even by the English, as heroes. If Washington had failed, he, too, would have been hanged and his memory by them consigned to infamy.

Treason doth never prosper; what's the reason? Why, if it prosper, none dare call it treason.

J. M. WALL.

New York, Jan. 24, 1903.

CANAL AND MONROE DOCTRINE.

To the Editor of The New York Times:

The purchase of the canal is in a fair way to be put through. We have tempted the Colombians, and—under the subterfuge of a one-sided lease—they are going to renounce their sovereignty over part of their dominion. Have we weighed the portents of this! Ever since President Monroe told the world that on this continent territory and nations can no more be appropriated, the world has stood in awe and obeyed. This doctrine rested on the natural law of self-defense, keeping the powers away from this continent, and on Jefferson's declaration that it is unjust to govern without the consent of the governed.

Already have we ourselves violated that doctrine by taking and ruling the Philippines. Already have we thus lowered our standard before the world, and, sadder still, have lowered our self-esteem. For it is no use trying to find excuses. There is no such thing as "destiny or "mission," but what is of our own making. And if we listen to our conscience we shall hear that it was done for the sake of glory—the power of the demon—and for the sake of profit—holy trade.

Shall we now do it all over again in Colombia? However slow the gods grind, they grind sure, and any infringement of natural laws is followed by punishment. Instance the negro. We have imported him, and he will be a thorn in our side to the end of time. So will be the Filipinos. So would be the Latins, if, like the latter, incorporated into our body politic in numbers. "But where are the numbers?" Why, they are all around us, "before our door." We need is a steady development of our imperialism, and a new century will find all North and Central America under one rule.

But suppose these Latins wish to join us with their "consent"? Even then we should decline, because, if we can absorb immigrants or a few creoles, we never can absorb countries and millions of people. By attempting such mixture we would thoroughly and in every way degenerate. By a similar process the great Romans once declined, decayed, and disappeared.

After all, why not honestly leave the Colombians their sovereignty? A way might be found, guarantees could be given, and the canal would still be built. We are, besides, strong enough to enforce guarantees should they be broken. Honesty is the best policy in life, so is unselfishness the better diplomacy. Let us do as we would like to be done by were we in their place, and the nations will not only respect us all the more, but they will also fear us, and—like us for it. And that American who demands a visible return for unselfish action will find it in our greater National strength and our true National glory.

New York, Jan. 25, 1903. S. M.

TENEMENT DINNERS AND DRINK.

To the Editor of The New York Times:

It is strange that in a city like New York, where the drinking question is of such vital importance, steps taken to abate the evil do not meet with more encouragement. The laboring man goes to his work these cold mornings in many cases with only a cup of weak and pale tea and a piece of stale bread for his breakfast. An hour or so later he seeks the saloon for the beer his poor stomach craves. I notice he generally has beer for his luncheon to eke it out, and perhaps he stops at the saloon on his way home, not having much there that is pleasant to anticipate.

A badly served, tasteless dinner drives him out in the evening to the saloon again. Can any one wonder at this? Can any one blame a man for this?

The habit is formed not always from the love of drink, but because of a badly nourished stomach. A remedy has been and is being tried by a body of women in this city, who send trained teachers into the tenements to give lessons to the women not only in cooking simple, nourishing food for their families, but economy in buying the food, using the fuel, in ventilating and keeping the rooms clean, and in the beauty of clean dress, clean face, and tidy hair. It is a noble work, but it seems the very best way to substitute good for evil. No talking or temperance pledging can do what good, wholesome food will do.

Many appeals have been sent out for contributions, however small, to carry on this helpful work among our poor, but they meet with little response. The results obtained have been so wonderfully good, and the women are so eager to learn in their own little homes, which they cannot always leave to go to the settlements, that it seems a pity more cannot be done for them for lack of money.

Men who formerly spent their money in the saloons give it now to their wives, who have learned to buy better things for less money and cook a tasty meal.

Girls and boys growing up in well-ordered homes make better citizens, and corruption would die out from lack of badly nourished, badly brought-up men and women.

J. S. HAGEMANN.

New York, Jan. 25, 1903.

UNION AND NON-UNION MINERS.

To the Editor of The New York Times:

One of the witnesses who appeared before the Coal Strike Commission during the week in behalf of the G. B. Markle Company was Gertrude Martin, a trained nurse, who testified that Mrs. John Markle employed three nurses to look after the sick among the coal miners. This witness was produced to show that the Markle people were not wholly indifferent to suffering among the miners and their families. She was brought forward to show how good and charitable they were. She was to prove that if the Markles did withhold wages earned, at least a pittance was given back as charity, for which the miners did not seem properly grateful.

But is not this testimony a sad reflection on the Markles? Does it not emphasize the poverty-stricken condition of their employes? It brings to light the fact that the miners were so poorly paid for their labor that when they became sick they at once became objects of charity. Is this a commendable state of affairs, and does it redound to the credit of American citizenship? Is John Markle, according to the testimony of this witness and the uncontradicted testimony of the miners, a good American citizen? And can the miners, living under such conditions, become and remain good citizens?

Should not the American public sanction the efforts of the miners to improve American citizenship and not withhold their aid because a few happen to give way to brute passion and commit acts of violence? Then there are tears shed by certain people because non-union men were reviled, and sometimes received worse treatment, at the hands of a few union men of brutal instincts. Yet these non-union men by their acts seek to perpetuate this state of affairs, wherein men and their families in case of sickness must immediately become dependent on the bounty of their employer's wife.

These tearful people seem to think the non-union men are contending for idealistic principles, when in fact by their every act they tend to perpetuate human misery and degradation—they retard civilization, by keeping down the wages of the working man and making it harder to educate himself and his family. If civilization and education and all the luxuries of life

RESPONSIBILITY FOR WRECKS.

To the Editor of The New York Times:

The sooner the public and press cease calling such wrecks as that on the New Jersey Central "accidents" the sooner will they be of less frequency. Any man who is in the habit of traveling on steam roads must be aware that he has often escaped a similar catastrophe. In the case of the tunnel wreck on the New York Central and this last on the New Jersey Central the engineer is blamed, but is not the responsibility higher up? The employes speak about rules regarding signals, &c., but do not say what the orders are relating thereto. This running past signals is not as uncommon as is generally supposed. There is a rule that when a train stops within a block that a flag shall be sent out. I am informed that the rule says 200 yards from the rear car.

Is not twenty-five to fifty feet nearer the usual distance? To make time seems to be the first consideration. Let an engineer run behind a few trips, especially on "fast trains," and see the result. He is probably "promoted" to a freight, with corresponding pay. When the authorities are investigating these wrecks why don't they probe as to what the orders are relating to the rules? Let the press push this subject as Mr. Jerome is pushing the lawbreakers, and perhaps we shall know more on the subject than we do now.

A COMMUTER.

New York, Jan. 29, 1903.

DANGER WHISTLES FOR LOCOMOTIVES.

To the Editor of The New York Times:

In considering the disaster that occurred at Graceland on the Central Railroad of New Jersey, we are all impressed with the fact that no matter what safeguards were in use by the railroad, they did not prevent the accident. One would naturally suppose that the instinct of self-preservation would have compelled Engineer Davis to not only try to save his own life, but also the lives of the passengers on the train ahead.

At certain times on all railroads there is a congestion of traffic at a certain point. This brings in an element of extra danger which is recognized by all railroad men. The engineer of the Easton accommodation knew that his train was in a position of danger from the fact that it was standing on the track used by the Philadelphia "flier." He knew that the "flier" was due on that track at that point at that moment.

Could not the following additional safeguard be used at very little trouble or expense?

All the engines could be equipped with an additional whistle, which we will call the "danger whistle," and which would be used under circumstances of danger only. This whistle of course would have to be so regulated that the sound would be recognized by all trainmen as a notice of danger.

If the engine of the Easton accommodation had been thus equipped, the engineer would of course have sounded the "danger whistle," thus notifying trains approaching in both directions that a certain train was in a position of danger at that particular point. The engineers of all trains approaching would be expected to respond by bringing their trains under control, so that they could be stopped quickly.

Not only the engineers, but the firemen and the conductors of trains approaching would hear the signal danger.

When the conductor of any train heard this danger whistle, his first impulse would be to notice whether the engineer had responded to this signal by bringing the train under control by applying the air brakes. If the engineer for any reason should fail to respond to the signal danger, the conductor himself would immediately bring the train under control by applying the air brakes from the car in which he happened to be at the time. Every car in the train is equipped so that the conductor may stop the train in this way.

JAMES W. MANSON.

Brooklyn, Jan. 30, 1903.

WEAKLY BUILT RAILWAY CARS.

To the Editor of The New York Times:

In discussing the recent Westfield disaster too much attention is given to the causes or blame for the collision itself, and not enough to the negligence of the railroads in not providing safeguards to the traveling public in event of such collisions. The deaths and mutilations are due, not to the collision, but to the frail cars and improper methods of heating. These the management have in their power to correct and do not, but turn the blame upon the man at the throttle.

If an owner of a rotten vessel sent her to sea carrying passengers, but with no life-saving appliances (boats, rafts, &c.) and through the negligence of the Captain the vessel were wrecked, if those passengers could have been saved had the owner of the vessel supplied it with life-saving appliances, would it be wise or just to place the loss of those lives upon the Captain?

The Park Avenue and Westfield disasters are similar in that in both cases they were old, flimsy cars, with none of the modern strengthening devices. In addition the Westfield cars, or some of them, were heated with the old-fashioned coal stove, (with all respect to the Vice President, who states, "All cars have Baker heaters, with steam pipes," &c.) These toy cars, with a possible horrible death by fire apparatus in each, are used, we must believe, with the full knowledge of the management, for if they are not aware of it, they are certainly unfit as managers.

Had the New York Central used strongly built cars, there would still have been the collision, but not so many gaps in family circles. Had the Central Railroad of New Jersey used strongly built cars and proper heating equipment, the little town of Plainfield would not to-day be mourning its dead. Yet there would still have been the collision—and an engineer to be proved guilty or not guilty.

I desire to quote a bit of the evidence given before the Coroner's jury, Jan. 20, 1903, in the Park Avenue disaster. The witness was Spencer T. Case, master car builder of the New York Central:

Q.—If the rear New Haven car had been a Pullman car, do you think the same damage and loss of life would have resulted? A.—I don't think it would.

Q.—Do you think a collision with a train made up of cars like the private cars of the New York Central would have resulted similarly? A.—I don't think it would.

Q.—Why? A.—The method of construction.

Q.—Is the use of construction about 10 per cent? A.—About that.

Q.—Longitudinal strengthening with steel frames has been used for the past ten years in private cars of railroad Presidents and Directors? A.—For about that.

There is no desire to insinuate that the old wooden death traps are used by any first-class road, to the exclusion of newer and stronger cars, but they still do use some of them on most of their local trains. It is an exception upon the Central Railroad of New Jersey that the smoker of afternoon locals is not of this kind, with its inflammable stove, and this is usually the last car. This is done with the knowledge that every car builder, every master mechanic, and every Superintendent knows that they are in event of a slight accident death traps.

Mr. Spencer T. Case above quoted is correct. It is all done for a saving of 10 per cent. in construction—not a high value to place upon human life.

LEWIS CASS JOHNSON.

New York, Jan. 30, 1903.

BLOCK SIGNAL SYSTEM THAT BLOCKS.

To the Editor of The New York Times:

Noting your editorial of the 20th instant relative to "Block Signals, and Do They Block?" I beg to advise you that there is a block signal system that automatically blocks, and such a system is in operation on the Boston Elevated Railroad, and the same system is applicable to steam railroads.

In addition to throwing a red light against an approaching train there is a lever thrown up a few inches away from the rail which drops down again when the rail which drops down again when the car has passed. There is also extending down near the rail with a valve in it which has a lever that comes in contact with the lever that is operated by the signal whenever said lever is up, and misses it when down. If the two levers strike the valve is opened, and that puts on the air brakes, and it is beyond the power of anybody to release the brakes until the train comes to a standstill and then only by getting off the train and closing the valve. With this system it is impossible to pass a signal even though the engineer should deliberately try to do so.

I hope this system will be brought to the attention of those who make laws for the safety of the people.

MARK DEAN.

New York, Jan. 30, 1903.

RIGHT TO KILL A SUFFERING HUM AN BEING.

To the Editor of The New York Times:

The disastrous wreck on the Jersey Central, in which the terrible loss of life ensued, ushers the question to the front. Whether it is humanitarian to sanction an impaled victim to be slowly roasted to death when it is a physical impossibility to rescue him?

If a race horse should fall and break his leg while galloping around the track, swift as the wings of meditation his misery would be ended by putting a bullet in his brain. Why should not the same expediency be resorted to in the case of a human being pinned to the ground by tons of debris and encircled by a sheet of flame, which closes in upon him and terminate his existence with excruciating torture?

The spectators of a catastrophe of this nature are powerless to render any assistance to the doomed victim, while the victim himself, seeing that death is rushing upon him with tremendous speed, brandishing over his head the most horrible of all deaths, incineration, begs piteously for them to do that against which it is said the Creator has set His canon.

The civil and religious laws of the world will not permit a person to end the misery of another, even when the groans and pleadings of the tortured one are intensified by the heartless flames, which incinerate him a few minutes afterward.

F. J. KENNY.

Jersey City, Jan. 29, 1903.

TAMMANY AND THE ELECTION PROSPECTS.

To the Editor of The New York Times:

Those who are saying that Tammany will have an easy task in carrying the elections this Fall are either ignorant or thoughtless. While there are doubtless many stupid persons who would vote against the reform ticket merely because a certain street was not kept clean or had not been repaved, or because a few gambling dens are still open, or because one or more out of a thousand reform officials have made a mess of it, nevertheless, the majority are either thinking people or they take their cues from those who are. While I have nothing very good to say of Mayor Low, except his honesty and good intentions, I have nothing very bad to say, and that is saying a great deal. Those who expected him to build Rome in a night out of the wretched confusion that Tammany left behind are simple; those who thought he was an Augustus, who boasted that he found Rome of brick and left it of marble, or an Alfred the Great, the most perfect monarch in history, or a Peter the Great as a civilizer, were slightly in error. He is not a great man, a highly intellectual man, nor even a smart or brilliant man. He assumed a mighty responsibility, and he has hardly measured up to the standard expected and required. There are few in our city who could.

Possibly Justice William J. Gaynor would have come the nearest, although there is other good timber in sight, as yet unmeasured, which might prove to meet the requirements—such as Swanstrom, Grout, Gen. Greene, Woodbury, and Redfield. Only close students of affairs are able to judge fairly of the colossal work required by the administration of a city like ours, and only these can recognize the really marvelous work which has been done by Mayor Low's staff. While Mr. Low is doubtless entitled to some of the credit for what his official cabinet has done, yet most of this great work merits only individual praise, and most observers can see where the work would have been doubled in usefulness were he the strong, wise, energetic executive that the administration requires.

As we used to say at college, the administration lacks "team work," and this always comes primarily from good captaincy. The Mayor is not a good captain. He would make a good merchant, a good college President, a good Ambassador, a very good arbitrator, but he will never make a great Mayor. He lacks the strong, aggressive, personal force, and, to be very frank, he lacks the intellect. Nevertheless, his administration will live in history. He has done more for our city than two Strongs and two hundred Van Wycks. If he should be opposed by such a man as a Van Wyck, he could probably defeat him. But he probably will not be nominated again, and Tammany will not necessarily win next Fall. Tammany is really in a minority in the City of New York. The people do not want any more Crokers or Deverys. While there is now more of a semblance of decency in Tammany Hall, the people do not trust it. A strong ticket next Fall, with a united opposition and a really strong name at the head of the ballot, and Tammany will again go down in defeat.

The election of last Fall in the city can hardly be considered in figuring the strength of Tammany. Many external causes account for the 190,000 Democratic majority. Mr. Coler was not considered a Tammany candidate, in the first place—rather the contrary, if anything. His personal popularity here on account of his recent public records in part for his great majority, and adding to this the unpopularity of Mr. Odell in the cities, and the public discontent over the coal situation, coupled with the attractive attitude of the Democratic Party thereto, it is clear that it was not Tammany, but a dozen different influences, that so carried the city by storm. When the voters become thoroughly conversant with the commendable work of the Low administration, and they will before next November, there will be an irresistible civic pride created which will require a greater man than even Edward M. Shepard to overcome.

EUGENE V. BREWSTER.

Brooklyn, Jan. 19, 1903.

ZIONISM AND ITS ENEMIES.

To the Editor of The New York Times:

Permit me to express my view in connection with the present strife between the promoters of Zionism and their antagonists.

History shows us indisputably the ample opportunities for the Jews to demonstrate their inability in self-government, and in tracing the cause we find in that direction conditions have not changed.

We also learn from history that there is nothing more dangerous to Judaism than the segregation and congestion of the Jewish race.

In the population of the entire known world we find four-fifths of 1 per cent. are Jews, and if they were distributed all over in that proportion they would undeniably be welcomed and respected, if for nothing else, for their innate aptitude in developing economic, commercial, and financial affairs.

Anti-Semitism prevails precisely in proportion with the excess of the Jewish population above their natural percentage. But, after all, there is to my mind nothing more conducive to the unity, integrity, and fraternity of the Jews, uniting more stimulating the strength of their creed and religion than the existence of anti-Semitism.

Judaism would, for a long time past, have been fast asleep were it not from time to time awakened by its boisterous enemies. The hostile spirit from without makes the Jews cling to each other, rely upon each other, and establishes mutual confidence among themselves. Let us, therefore, be contented with the present condition. Nature will take care of the congested parts of the Jews. They will ultimately flee from their oppressors and find a shelter and protection. Let us be consoled with the existence of this glorious country of ours, where all its citizens, irrespective of creed, race, or color, enjoy all the privileges, rights, and protection of a lax and Constitution framed by the most humane and liberal-spirited men the world ever produced.

TOPICS of The DRAMA

The Performance of Ibsen's "Ghosts" by Mrs. Mary Shaw—Shakespeare as He Should Not Be Archaeologized—Scenery and Dramatic Imagination—How to Suppress the Faddists.

By an immemorial custom, the wisdom of which has never been disputed, one day in the year is consecrated to fools and folly. Last week, as it happened, was given over in the theatrical world to fads and faddists. On Monday we had a revival of Ibsen's grewsome tragedy of "Ghosts," and on Tuesday an attempt to revive archæologically an Elizabethan production of "Romeo and Juliet." Would it be well to make this week of fads an annual fixture? The welkin still rings with the voices of disgust and despair, yet we humbly submit that it would—not that we hate faddists less, but that we love fads more. Wasn't it one of the characters of Molière, who, while posing as a patron of the arts, refused to be a patron of the artists? For centuries the world has repeated the saying with derision, unaware of its subtle wisdom, even as the incomparable M. Jourdain spoke prose for forty years without being aware of it. Let us deprecate those ardent persons who decry Shakespeare in order to laud Ibsen, and deplore the people who give us Shakespeare in Noah's archaeology; but let us not cease to welcome the discussion of all unaccustomed phases of art.

Miss Mary Shaw and the "Ghosts" of Ibsen.

Assuredly it is a great pleasure to have seen Miss Mary Shaw again in Ibsen's "Ghosts," and especially as the company she has brought with her from Baltimore is of great strength and has played long enough together to give a strong performance in the ensemble. We say "to have seen" quite advisedly, for though under Miss Shaw's management the horror of the ending is reduced to a minimum and Ibsen's humor is thrown out in full relief, the only real pleasure to be derived from any performance of the play is the pleasure of ruminating upon the spiritual pabulum it affords. What most impresses one in the theatre is the secret sewer of old Alving's vices and the lothsome brood of disease, moral, and physical, which they engendered—the paresis that is wiping out the genius of the young artist, the cherry-colored velvet of his softening brain, and the babbling of his idiocy at the final curtain, as he asks his mother to give him the sun for a plaything. These things are the obvious content of the drama. But they are not the matters of chief import.

It is said that Ibsen was astonished at the outcry of rage which greeted the first performance. To this day even those who champion the play seldom talk with comprehension of its inner motive. Even Miss Shaw, in an interview published in THE TIMES speaks of it as a plea for divorce. It is infinitely more than this. Its catchword is "the joy of life," and in Ibsen the catchwords are as important as the themes in Wagner.

More than any other modern playwright, Ibsen stands for the right of the individual to rejoice to the full in the exercise of all normal human faculties. When he paints our modern society in terrible colors and with sickening detail it is because our modern society cramps the soul in its highest activities. "Ah, the joy of life!" cries the stricken Oswald. "That's a thing you don't know much about in these parts. I've never felt it here. * * * and then, too, the joy of work! At bottom it's the same thing. But that, too, you know nothing about."

Because it was the joy of life that brought old Alving to disease and death it has been assumed that Ibsen is an ogre of grim pessimism and is painting life as merely sordid and pestilent. The truth is quite the reverse. Ibsen is the prophet of sane liberty and wholesome gladness. From what Alving's wife says of him to Oswald it is clear that Alving was more sinned against than sinning. "You ought to have known your father when he was a young Lieutenant. He was brimming over with the joy of life. It was like a breezy day only to look at him. * * * Well, child of joy that he was—for he was a child at that time—he had to live here at home in a half-grown town, which had no joys to offer him—only dissipations. He had no object in life—only an official position. He had no work in which he could throw himself, heart and soul; he had only business. He had not a single comrade who knew what the joy of life meant—only loungers and boon companions."

In a large, free society, such a nature would have found full exercise in normal pleasures and in normal work. But in an atmosphere of dull, puritanical conventionality the joy of living festered. If Ibsen paints old Alving's nature in black colors it is because he is a moralist as stern as Dante, or as Shakespeare in his tragedies. What he is really girding at is the rottenness of a society in which there is no place for the joy of life—conventional proprieties that breed moral corruption in highly vitalized natures, and then empty the drains of filth into the life of wives and sons. No doubt he would approve of divorce in such a case as Mrs. Alving's, but that is only lopping off the branches. "Ghosts" strikes at the very root of the social evil—at our puritanical way of suppressing all that is exuberant and joyous.

A narrowly Puritanical society—a society to which life is a vale of tears and duties are all mortifying to the flesh—is in the nature of things hypocritical. It can only exist by denying the fundamental impulses of human nature toward freedom and joy. And when the result of such denial is mercilessly exposed, the creature of dead convention falls into a fit of horrors at the hideousness of his own image and cries out that the whole world has been represented as diseased. So the truth teller is branded as an enemy of the people, and those who easily condone the shallow fripperies, the pink sentiments, the inane buffoonries, and the mawkish emotions of the conventional stage cannot find words vile enough to pour upon those who say simple truth in decent language. Ibsen never preaches, and there is nothing in his plays that can be construed into an advocacy of free love. He has represented family affection and loyalty with a truth and warmth of appreciation that has never been surpassed. When, as in "Ghosts," he crushes us with horror, it is in order to show the dread penalties that come upon us all because we deny our spirits the liberty to expand naturally in the joy of life.

Shakespeare as He Should Not Be Archaeologized.

If Mr. Short had set out to commit all possible blunders in his experiment in Elizabethan archaeology he could scarcely have exceeded his actual performance. To make a public which is accustomed to richly artistic scenery and beautiful lighting accept the bare stage of our fathers is at the best an arduous undertaking, but he quadrupled the difficulty by choosing a play that has been familiar from childhood in the most elaborate productions. If his first piece had been novel to the audience it might have excited curiosity and stimulated the imagination to the Elizabethan point of framing its own visual images, but the piece was "Romeo and Juliet," our visual images of which have long been filled by conventional modern scenery. Instead of transporting us in imagination to the actual Verona, it recalled the all too familiar stage garden and calcium moon, emphasizing thereby the bareness of the stage. He had still, however, two trumps remaining. In the absence of stage scenery he had time and to spare to give all of the "two hours' traffic on the stage" promised by the prologue—to reproduce Shakespeare's splendid dramatic narrative entire, making it flow along without hitch and at the speed best calculated to stimulate and sustain the interest. In point of fact he hewed and hacked at the text, transposed entire scenes, and in a word wrought a havoc in this literary masterpiece which would not have been justified by the most elaborate stage setting. Being saved the expense, furthermore, of what we call a production he might have afforded a company which was strong not only in the leading parts but in the ensemble. With one exception his actors had not progressed beyond the stage of being conscious of their costumes; and even the Juliet of Fernanda Eliseu was remarkable only for undeveloped temperament. The single fresh touch of the evening was given by the trained Elizabethan audience which cut capers, joked and guyed the actors in the way described in all histories of the drama. For once in a blue moon it is not amiss to show what the inside of an old theatre looked like, and how an old audience behaved; but since Mr. Franklin Sargeant did this in February, 1896, in this very playhouse and in March, 1896, in Sanders's Theatre, Cambridge, (tactfully using Ben Jonson's "Silent Woman" as the vehicle,) the moon has not been observed to change its silver hue. Most of our information as to the mistbehavior of our forefathers in the theatre is derived from passages in which old dramatists protested against it for the reason that it destroyed the effect of the play. If the best plays and the best actors in a time when all stages were bare were impaired in their effects by such uproar, how did Mr. Short expect to come out of the ordeal?

Scenery and the Dramatic Imagination.

Mr. Short's Swan Theatre was a goose, lad; but if we ever have another January fad week there is hope of better things. Mr. Sargeant has been planning a series of Elizabethan revivals in the Empire Theatre. On the dismal evening of "Romeo and Juliet" his spirits were drooping and he threatened to countermand the order for his stage settings. But it is to be hoped that better counsels will prevail. Granted a sufficiently large stage and an intelligent management with a single eye to the artistic effect of the drama, the results should be as valuable as those of the present experiment were disappointing. For a man of the modern world to imagine by himself the surroundings in which the action passes, as one must when the stage is bare, is perhaps difficult; but the difficulty has been vastly exaggerated. When we read a play in a book our imaginations body forth not only the scenes, but the action; yet the ability to read good plays with pleasure is easily acquired, and when the imagination has learned to frame its own images the most splendid creations of the scene painter and the carpenter are as often a hindrance to appreciation as an aid. "I went once," said Emerson, "to see the Hamlet of a famed performer, the pride of the English stage, and all I then heard and all I now remember of the tragedian was that in which the tragedian had no part; simply Hamlet's question to the Ghost:

> 'What may this mean,
> That thou, dead corse, again in complete steel,
> Revisit'st thus the glimpses of the moon?'

"The imagination which dilates the closet he writes in to the world's dimensions crowds it with agents in rank and order, as quickly reduces the big reality to the glimpses of the moon. These tricks of his magic spoil for us the illusion of the green room." This is an extreme view of the case, and pushed to its conclusion it would do away with acting as well as with scenery—a palpable absurdity in view of the fact that Shakespeare's one and apparently his only purpose in writing the plays was to have them acted. Yet it admirably suggests the danger of encumbering a production of Shakespeare with irrelevant details. No doubt if Shakespeare were now alive and writing he would be glad to avail himself of all modern appliances, and no doubt themost popular, and most satisfactory revivals of his plays will always be those with scenery. But it is equally certain that our modern methods do serious damage in certain respects to the poetic effect.

Emerson's imagination seems to have been outraged by the glimpses of the calcium moon, and indeed the most beautiful scenic effects fall far short of the images which the poet suggests to any active mind. It would of course be useless to urge any modern ghost to dispense with the calcium; but there are certain respects in which those who stage Shakespeare offend constantly and quite needlessly. After the ghost has disappeared at the end of the first scene Horatio breaks out into a lyric strain, the dramatic effect of which has been universally admired, and the poetic value of which is so great that Milton transferred the lines almost verbatim to "Paradise Lost."

But look, the morn, in russet mantle clad,
Walks o'er the dew of yon high eastern hill.

Some managers have accompanied the lines with an increase of light on the backdrop. Mr. Sothern throws the rays of a calcium upon the stage through a gate in the scenery. In either case the effect is to substitute in the mind of the hearer a crude theatric effect for one of the most beautifully suggestive images in the language.

Instances could be multiplied. In "Macbeth," when Duncan and Banquo come to the castle, they describe it thus:

> This castle hath a pleasant seat.
> The air nimbly and sweetly recommends itself
> Unto our gentle senses. This guest of Summer,
> The temple-haunting Martlet, does approve,
> By his loved mansionry, that the Heaven's breath
> Smells wooingly here; no jutty, frieze,
> Buttress, nor coign of vantage, but this bird
> Hath made his pendant bed.

As Irving staged the scene the castle was shown, a thing of painted canvas absurdly out of proportion, and had been in the eyes of the audience since the rise of the curtain, with suggestions of birds' nests in the machicolations. If the stage had been bare, or even if the mumpsy castle had been omitted, the mind would have framed for itself Shakespeare's vision of a feudal highland castle in a Summer sunset. As the scene was staged the lines had no more effect than an inventory, which one mechanically tallied with the work of the scene painter.

The Value of Sceneless Productions.

The value of a complete representation of the text has never been sufficiently emphasized. Educationally, and from the point of view of scholarship, it is highly important, and, what is of vastly greater moment, it enhances the interest of the play as a dramatic entertainment. Mr. Sothern's production of Hamlet is unusually full, beginning before eight, and lasting until almost midnight; yet there are gaps in it that would admit the proverbial team of horses. Many missed Polonius's often-quoted advice to Laertes; many Hamlet's most vigorous denunciation of his mother's sins; no one not familiar with the play quite knew who Fortinbras was when he appeared at the end to claim Hamlet's crown; every one must have felt that the omission of the scene in which Hamlet surprises the King at prayers not only weakens the story, but sacrifices one of the salient traits in Hamlet's character—and these are only a few of the most important omissions. On a bare stage, moreover, scene follows scene and act follows act in rapid succession, whereas in a scenic production there are frequent pauses, in which the interest is likely to fade as it does between the installments of a novel in a magazine. It were madness of course to argue that Shakespeare should be played only on a bare stage, but when our actors, managers, and critical public once learn the value of a complete representation of the text, as they will when they become familiar with bare-stage productions, they will become less and less tolerant of excrescences in the production, such as have lately been all too frequent.

How to Suppress the Faddist.

In countries where the drama is properly organized, fads prosper and the faddists are at rest. In New York we have "Ghosts" and "The Doll's House"—"The Doll's House" and "Ghosts." In the repertory theatres of Germany there are occasional performances of "Rosmersholm," "An Enemy of the People," "Hedda Gabler," and all the rest, even including that impossible stage production, "Peer Gynt." The plays are by no means popular even on the Continent, but those who want them and are ready to pay for them get them. Similarly, experiments have been made, and notably in Munich, in reproducing the Elizabethan theatre, with results that have been of great interest, and of value in increasing the general intelligence with regard to the practical aesthetics of Shakespearean productions. For the cultivation of fads and the suppression of faddists give us a repertory theatre! JOHN CORBIN.

THE PANDARISM OF THE INTELLECTUAL DRAMA.

To the Editor of The New York Times:

When a story like Tolstoi's "Resurrection" is to be put on the stage it is perhaps inevitable in an Anglo-Saxon country that it should be attacked on the ground that such dramatic representations are indecent and that those who promote them are pandering to vicious popular tastes; but it is seldom that the illogic and the essential falsehood of such attacks is as they are evident in the following paragraph:

Something has evidently happened in regard to the production of "Resurrection," founded upon Tolstoi's "Resurrection," in her Majesty's Theatre, London. A little while ago a London theatrical writer said Mr. Tree intended to announce that the production was intended for adults only, but now the story: that Mr. Tree, as regards Tolstoi's novel, it may be hinted here that, although the story in book form contains certain scenes almost brutal in their primitive force, it will be Mr. Tree's aim to soften the asperity of these as far as possible to preserve the beauty and the cleanliness of the tales." An intimation of some sort has been received probably from the examiner of plays that he would not allow coarse or brutal exhibition under the cover of a great and good man's name, it is quite possible, of course, for a novelist to use gross illustrations with high moral purpose, but there is never any moral purpose in the reproduction of shocking or indecent things on the stage. Coarse or lustful exhibitions before the footlights are with the manager, other objects primarily, than money making. There may be exceptions to this rule, but they are too rare to be taken into account.

It will thus be seen that if you and I are raised by "Resurrection" the book to the mount of spiritual transfiguration, we are receiving proper inspiration from "a great and good man," but if in the theatre, aided by actors of genius like Signora Duse and M. Dumeny, we receive the same sensations from the same people in the same situations, we are swayed by "malignant and base motives," and the dramatist and the actors to whom we owe these sensations are our pandars. I cannot cry with Mrs. Alving, "I see the connection." But then logic has never been a trait of moralist criticism in New York—who can ever forget that singularly coherent criticism of "The Joy of Living" (Es Lebe das Leben) in which one was told in the first paragraph that Herr Sudermann had written a tract against free love, and was informed in a second paragraph that he had written one for it?

One incidental argument in the paragraph quoted seems particularly naive. The moralist becomes almost tearful over those who cloak "a coarse or brutal exhibition in a theatre under the cover of a great and good man's name." I rather doubt if Count Tolstoi will think favorably of Mr. Tree's emasculation of him, but I am certain that M. Bataille's play in its original state will give him positive pleasure. What makes me certain is his tragedy, "The Power of Darkness." This, be it noted, is no dramatization of a novel by another hand; it is a play by Count Tolstoi himself. If, in Tolstoi's eyes, "shocking or indecent things" are never allowable on the stage, what shall one say of a drama which has in the first act two adulteries and the repulse of an innocent girl by the man who seduced her; in the second act robbery and murder; in the third act drunkenness and what one may call incest manqué; in the fourth act the smothering of a babe under boards by its own father, and in the fifth an attempted suicide, a full confession of the crimes, and an Arrest by the police? These proceedings, at any rate, so shock the moralist's friend, the English Reader of Plays, that he has never allowed the drama to be performed in England. To a mind less moral than the one which licensed "The Conquerors and rejected "Oedipus the King" all these situations, of course, are merely the externals. The play gives us a descent into hell and an ascension to paradise. At the end one cries with the old Akim: "God is here!" With terror and inspiration we watch the birth throes of a soul. But the case is precisely similar to M. Bataille's "Resurrection." There, too, we have the descent into hell and the resurrection of souls. "Yes, yes, thou art right, let us part upon this peak of illumination. * * * The pangs of this separation are the birth throes of a new life. * * * Yes, sing with all these people. * * * All these poor people who pour out their souls. * * * Courage. * * * Blend thy voice with these thousands of voices, and, while I go away, do not turn thy head to see me depart. * * * Farewell, my little, little Katucha, be happy." This is the ending of the scene of parting on Easter in the Siberian snows, in which M. Bataille has concentrated in a vivid scene the thought of the last part of the novel, and I cannot conceive anything more in the spirit of Count Tolstoi. The moralist should make, surely, a detailed statement of the differences in substance and in spirit between the "Power of Darkness" and M. Bataille's "Resurrection," which make the first the work of a "great and good man" and the second the work of a pander. JAMES PLATT WHITE.

Buffalo, Jan. 30.

OF THINGS THEATRICAL

The Strenuous Life as Experienced by Actors on the Road.

An Ingenious Game of Poker—Book and Play Profits Compared—A Post Office Comic Opera.

When Virginia Harned returns to New York in a few weeks to invite opinion again as to the merits and demerits of the unhappy lady Iris, heroine extraordinary of a modern London flat, she will probably feel like a battle-scarred veteran returning from long stages and battling in hostile foreign camps. For the fair Virginia has had anything but a patch of roses since she departed. The controversial discussion, incidental to the projecting of Mr. Pinero's latest study, is in a measure a departure from similar discussion heretofore. The subject matter of plays that usually evoke condemnation from those who object to the theatre as a medium for the study of human weakness has usually been based on the fact that the heroines of the dramas thus censured have been "women with pasts."

But the problem in "Iris" is based rather more on the fact that she is a "woman with a future," and the suggestion of just what sort of a future here is to be, when the last curtain falls on the play, is one that does not open up a pleasant vista to the imagination. Miss Harned, therefore, since she left this city has been subjected to a deal of varying criticism. Not only has her play been abused, but comment of a general nature has been indulged in tending to reflect on all actresses who essay such rôles as have their foundations in the quagmires of human emotion. E. H. Sothern, on one occasion had to come forward in Miss Harned's defense, and in an open letter took issue with those who criticised his wife.

In Detroit Miss Harned had a fall which incapacitated her from playing for a night or two; in Providence there were several chapters added to the list of misfortunes which have pursued her and her company. A pet dog tried to destroy the beauty of Miss Harned's leading man, William Courtenay, and he now carries several stitches in his lip, attesting his crustfulness in a canine friend, whose affection was of too clinging a nature to be entirely pleasing. Before the company reached Springfield a minister denounced "Iris" and to his denunciation added a practical effort to prevent the production of the play in that city. Aldermanic wisdom being called on to decide whether the play should be permitted within the precincts of that New England town.

The climax, however, was reached in an episode in Waterbury, which the local critics set down as being one of the most disgraceful that ever marred the history of the playhouse there. So riotous was the disturbance that the lines of the actors on the stage were indistinguishable, and the third act was ruined utterly. The act was shortened and the curtain rung down as quickly as possible. An eye witness thus describes what happened:

"Thanks to warnings as to the wickedness of 'Iris' distributed by well-meaning people, the habitués of the gallery, anticipating a most delicious evening with a sort of a combination 'Sapho' and 'Duncan Clark's Female Minstrels,' had packed their favorite abiding place a thousand strong. They made more or less racket during the first two acts, but they were easily drowned out by the body of the house, which coughed as enthusiastically and as persistently as a high-pressure boiler on a Mississippi River steamboat. The rise of the curtain on the second episode of the third act, however, showing the apartments of Iris in the Italian villa at dawn, was the signal for the gallery to break loose. Houses and stage were dark; therefore the bosoms of the Hooligans were filled with bravery. Catcalls, whistles, resounding smacks, cuckoos, and groans came in a chorus from above. The patrons of the drama in the upper circles, having invested 25 cents each to see something 'sporty,' were voicing their disappointment and trying to push matters along.

"Scarcely had the curtain fallen when to the centre of the stage, white-faced and shaking with anger, came Albert Leverings, Mr. Frohman's road manager:

"'I want to tell you up there,' he cried, pointing to the gallery, 'that if you wish to witness the balance of this performance you must keep still. If we have any more of this disturbance we'll ring the curtain down. Understand me. At the very next noise we quit.'

"The gallery relapsed into silence, while the pit applauded. For the remainder of the evening there was little disturbance.

"'Don't a charming lot of theatregoers you have here in Waterbury,' said Miss Harned after the performance. 'It has been such a pleasure to meet them. Never in all my service on the stage have I passed through an experience such as that of this evening. Your city certainly is most brilliantly original!'"

***

Somewhat in line with Miss Harned's experiences were those of an opera troupe which endeavored recently to purvey the beauties of "The Bohemian Girl" to an audience composed largely of college students in Ithaca. Will A. Page of Henry Miller's staff tells the story:

"Just a few days before I visited Ithaca an opera company tried to give a week of classic repertoire to university people there," he said. "I didn't see the performance, but a sympathetic stage hand thus described what happened:

"'The company's been scoming here off'n on for years, and the boys, they know what's going to happen. Monday night the boys kept quiet, though the performance was punky. They went around then and bought up all the seats for the rest of the week, so's to keep ladies and respectable people out'n the house. Tuesday night they commenced throwin' turnips and beets, and just when Dee'ts Foot or whatever his name is in 'The Bohemian Girl' tries to sing a big cabbage strikes him. He ducks behind the scenes and the manager goes out and threatens to stop the performance unless the boys behave. They're pretty quiet to-day, though the girls gets so many presents we stage hands all had free vegetables for a week.

"'Next night a bum egg starts the ball rolling, and the manager tells us to drop the net. You see, the company always carries a big tennis net with them, rigged up like a curtain, in case of trouble. Down came the net, coarse as a tennis net, and the students roared. There was a' open space at the top, just a few feet below the arch, and all the vegetables in the house was sent up to the top gallery. The boys up there tried to play tennis over the net, using the cabbages as balls.

"'The singers tried to go on with the opera, for the manager was satisfied so long as the boys paid. Every once in a while a cabbage or a turnip would go over the net and squash down on the stage. The actors played up stage, out of reach, but they had to duck often. The worst came when they put on the living pictures between the acts. Seein' that the set was there to catch vegetables the girls wasn't afraid to pose in "Beautiful Spring" and such like things. So when the lights was turned up there was six or seven of the girls up stage, all posing. The students gave a yell and tried to hit the girls with turnips, but the net stopped everything and the vegetables fell down by the footlights. The girls giggled, but they laughed too soon.

"'Some of the boys had been shooters, and they shot right through the holes in the net. Then we had to ring down the curtain. The company left town next day.'"

***

Mr. Page is also responsible for this description of life in the "tank towns":

Up in the morning at half-past four.
The way train is late an hour or more.
Change cars at Penn Yan to a cattle train,
Then at Painted Post you shift again.
Stay at hotels where the food is bad;
Cheese with your soup, ice cream with stewed.
More rough riding, at last you land
At the hamlet called "a one-night stand."

"Ever since I told that story about the ingenuity of woman," said Louis Mann, who is appearing in his new comedy, "The Consul," "my man friends think I am unfair to the sex, and have bothered me so much that I have been watching with the alertness of a Sherlock Holmes to find an unusual incident in favor of man's sagacity. I found it recently near Atlantic City. While out strolling on the railroad tracks I saw two tramps enjoying the delights of a gypsy couch. As the trains went by I could hear them call out the numbers on the cars. One would say, '1-2-3-4-5-6-7.' Then the other would call, '8-9-4-5-6-8, you lose.' They did this every time a train passed. At last my curiosity prompted me to ask what they were playing.

"'Poker.'

"'Without cards?' I inquired. 'Impossible.'

"'Straight enough,' said one, 'if you understand it. You see, we have to have some recreation and as we are "de jungle buckers" we have a hankering about us for dice. It is too much trouble to carry and deal pack so we (Chorus—we?) invented a game of our own. It go—'

"'So what?' said I, making myself popular as the President by closing a few shekels to the inventor of the game.

"'It's like this: While we are waiting for a train to come along the decide who have the first car for his hand. When the next train comes we reverse the order of the choice. There are no kings, no queens, no knaves in the pack—except ourselves, no suits, except the ones we have on, and no "ions" except the ones you find on us. Only numbers count, and you must use your head to form them into pairs, two of a kind, four of a kind, any old kind of a kind. Take for instance the hand on which I just won. The number of the first freight car was 222, and it was on Track Twice. That made four "twos" and two "threes." That's a pretty good hand, but the last car was the best, for it was 444, and that was on twice, so you get a full six "sixes," and won in a walk. That beats card poker playing, don' you think?'"

***

Discussing the question of who is the better paid, the man who writes for the reading public or the one who writes for the theatre, William H. Crane finds a verdict for the playwright by a large majority. Incidentally, he quotes some figures with reference to successful plays which may be interesting. According to Mr. Crane, "Henry Howard was paid $2,500 down for 'The Henrietta,' before that play was placed even in rehearsal, and his contract called for the payment of a fixed sum every time the comedy was performed. A book that will last ten years and continue throughout that time to enjoy large sales would be considered a marvelous work. 'The Henrietta' is over thirteen years old, and as it is still being played Mr. Howard continues to find it a means of keeping the wolf very far from his door-step.

"The amounts paid authors in royalties differ, of course, very much. The young man who is unknown and in whose work a manager feels that he is taking some risk cannot expect to demand or receive the royalties that does the tried and successful writer who has proved that he has the technique of the stage down to his finger tips. I was informed that Hall Caine received from the performances of 'The Christian' on an average of $1,000 a week throughout the first season his play was before the public.

"As the play is now going the rounds of the stock companies it is adding to Mr. Caine's worldly wealth.

"There was a period in New York two seasons ago when five of Clyde Fitch's plays were asking attention at the same time. All were successes, and it was figured that Mr. Fitch's earnings for the year would amount to fully $200,000. Mr. Fitch, by the way, is probably the best paid of all our native dram

SOME OFFERINGS THIS WEEK AT NEW YORK PLAY HOUSES

Augustus Thomas Departs From the "Geographical Drama" and Furnishes a Comedy With Local Color—Miss Tyree's Rise From Bessie to Elizabeth—Bonn's Appearance as "Mephisto."

WEEK'S CALENDARS.

MONDAY.—Mrs. Osborn's Playhouse, "Much Ado About Nothing." Irving Place, Bonn in "Faust."

THURSDAY.—Madison Square, Elizabeth Tyree in an Augustus Thomas comedy.

FRIDAY.—Empire Theatre, special students' matinée of several one-act plays.

Augustus Thomas has departed temporarily from the "geographical drama" with which he so long has been identified, and his latest creation, "The Earl of Pawtucket," which will be seen at the Madison Square Theatre on Thursday evening, will be an up to date and metropolitan affair. So far to the other extreme has the playwright gone, that every scene of the new comedy is laid in the Waldorf-Astoria, beginning in the palm room at the breakfast hour, following with a luncheon in suite 554 and ending in the Turkish room in mid-afternoon.

The comedy will have to do with the efforts of an Englishman of noble birth and highly accentuated mannerisms to pass himself off on a supposedly unsuspecting public as a native of Pawtucket. The playwright drew his chief character from his impressions of Lawrance D'Orsay, the English actor now under contract with Charles Frohman, and loaned by Mr. Frohman to create this role.

The story tells of a Lord Cardington, come to New York on a two-fold errand. First, there is to be a trial in the House of Lords of one of its members and Lord Cardington, to avoid sitting in judgment on one of his peers, determines to quietly disappear until the affair is over. He is led to cross the Atlantic by the knowledge that a beautiful American girl, whom he has seen several times in London and on the Continent, is about to sail for New York, but wishing to be unknown for the sake of an effective disappearance, he determines to take another name. An American whom he has met at the London clubs, Montgomery Putnam, suggests that the Earl use his name, as he has not been in America for some time and does not intend to return. The Earl accepts the name and comes to New York, stopping at the Waldorf-Astoria, where also the American girl and her father are domiciled. It develops that the American girl had been the wife for a brief three months of this Montgomery Putnam, but is now divorced, and when presently the Earl is introduced to her under the name of her former husband, some amusing complications develop. The Earl's efforts to pass for an American, in spite of his pronounced English accent and mannerisms, his attempts to convince people of his intimate knowledge of Pawtucket, where he is supposed to have been born, his embarrassment when vengeful lawyers confront him with a demand for alimony in arrears, of which he knows absolutely nothing, his final unmasking as an impostor and his arrest for having made away both with Montgomery Putnam and Lord Cardington, (articles belonging to the latter having been found, among his effects,) and the ultimate unraveling of the tangled skein, are said to be treated in Mr. Thomas's happiest manner.

Elizabeth Tyree has been engaged by special arrangement with Henry B. Harris for the part of the American girl, in quest of whom the noble Britisher comes to this country. The juvenile love affair of the comedy will be between John W. Dean and June Van Buskirk. Charles B. Poor will play the role of Fordyce pere, Ernest Elton that of Wilkins, valet to the Earl, and Robert McWade will be seen as Senator Barker, a character supposed to represent a well-known Western Senator with millions at his disposal, who is desirous of breaking into New York society. Louise Sydnuth will be seen in the role of "Aunt" Jane Putnam, while others in the cast will be Claude Cooper, John W. Paul, James Ottley, Wilbur Collier, Hudson, Frederick Hawthorne, John F. De Gez, Alfred Mayo, H. H. Hilight, and James Gardner.

THE GIRL FROM VIRGINIA.

Elizabeth Tyree is a Virginia girl of a good family that lost its possessions in the civil war. In October, 1890, she journeyed to New York and became a student in the American Academy of Dramatic Arts. Three weeks later Mrs. Kendal visited the school and "discovered" her. November of that year saw Bessie Tyree—she had not yet reached the dignity of Elizabeth—enrolled in the Lyceum Theatre company, understudying Grace Henderson and Effie Shannon. She was to stay there ten years.

Miss Tyree's first notable hit was scored through her amusing assumption of the mannish characteristics of Lady Thomas in Belfubet in Pinero's comedy "The Amazons." Then came "The Case of Rebellious Susan," by Henry Arthur Jones, in which the actress made a distinct advance in public approval. A succession of indifferent parts was followed by a capital rôle in Pinero's "The Benefit of the Doubt." When his fantastic play, "The Princess and the Butterfly," was produced, Miss Tyree was recalled from a road tour in "The Late Mr. Castello" to play one of the important sentiments in the cast. Just previous to its first hearing in New York, to her infinite discouragement she fell ill.

Henry Arthur Jones gallantly came to her rescue, for in his play of "The Liars," produced by John Drew, the rôle of Dolly Coke was found to be especially suited to Miss Tyree, and she was "loaned" for the production. The end of that season saw the artistic status of the actress firmly established, for after the New York run of "The Liars" she returned to the Lyceum to create the rôle of Avonia Bunn in Pinero's "Trelawney of the Wells." Miss Tyree made so captivating a figure of the sentimental member of the old Sadler Wells Company that, as in the author's earlier play of "The Amazons," she was considered to have won the honors of the comedy.

Again with Henry Arthur Jones's assistance, she made a substantial success in that author's comedy "The Manœuvres of Jane," with which she created the rôle of Constantia Gage. The following season she had the part of Jane. Notwithstanding that the rôles were directly opposite in their characteristics, Jane being open and impulsive, while Constantia was sly and calculating, Miss Tyree gave convincing portrayals of both. This was practically her last appearance with the Lyceum Theatre company.

"MUCH ADO ABOUT NOTHING" AT MRS. OSBORN'S.

The bill for this week at Mrs. Osborn's Playhouse will be "Much Ado About Nothing," with Thomas Haywood's comedy, "A Woman Killed by Kindness," in preparation for the week following. The cast of "Much Ado About Nothing" is:

Benedict	Harry Leighton
Dogberry	Robert C. Turner
Verges	F. M. McKendrick
Leonato	George Turner
Don Pedro	Wright Kramer
Count Claudio	Bertram Yost
Don John	Stanley Jessup
Antonio	George Sargent
Borachio	W. J. Bowsin
Conrade	Franklin Gill
Friar Francis	J. Hurley
Balthasar	William MacKenzie
The Sexton	Robert Chandler
Dogberry	Charles Chapman
Oatcake	William Crosman
Beatrice	Miss Nora Dunstave
Hero	Miss Fernanda Eliscu
Margaret	Miss Rosebarch
Ursula	Mrs. Emma Brennan Ince

"FAUST" AT THE IRVING PLACE.

Ferdinand Bonn, the German actor, whose engagement at the Irving Place Theatre is nearing its end, will appear during this week as "Mephisto" in Goethe's "Faust," and as "Petruchio" in Shakespeare's comedy, "The Taming of the Shrew," which will be preceded by the one-act play "Farewell from the Regiment." Monday evening "Faust" will be given and Friday "Gretchen." Bonn's appearance in the part of "Mephisto" is anticipated with interest. In leading rôles of "Faust" will be seen Messrs. Rottman as Faust, John Feistel as Valentin, Otto Reimann, Otto Meyer as Matthäus, Claudius, Willy Frey, Richard Schlaghamer, Max Haenseler, Jacques Horwitz, Eugen Hohenwart, Adam Hofmann, the Misses Berthe Rocco as Marguerite, Georgine Neuendorff as Martha, Grete Kupfer as Liesschen, Marie Klerschnerr as Spirit, Marie Reichardt and Frida Brandt.

On Tuesday, Wednesday, Thursday, and Saturday nights, as also in Saturday's matinée, Bonn will be seen in "Taming of the Shrew," supported by Camilla Dalberg, Grete Kupfer, Marie Reichardt, Otto Reimann, John Feistel, Matthäus Claudius, Vladimir Schamberg, Otto Meyer, Max Haenseler, and Julius Ascher.

ONE-ACT PLAYS BY THE EMPIRE SCHOOL.

Five one-act plays will be presented by the American Academy of Dramatic Arts at the Empire Theatre on Friday afternoon, Feb. 6, including "On Guard," "The Electric Spark," from the French of Edward Pailleron; "Crossed Swords," "The Day the Duke Forgot," and "The Drop of Water," a play in the repertoire of Sarah Bernhardt, by Jacques Normand. The plays are said to be new to American boards.

PLAYS TO SUIT ALL TASTE.

Extraordinary Variety in the Offerings This Week for Metropolitan Playgoers.

He would indeed be hard to please to whom something in the long list of current attractions made no appeal, for it has been many a long day since so diversified an array of entertainments has invited the attention of metropolitan playgoers. If there is a preponderance of any particular kind of attraction it is in those which music forms a part. Some persons may not care for such entertainments. Attendance, fortunately, is not compulsory, and they will be able to find offerings of other sorts that will make appeal to their individual tastes. That the great mass of people, however, do like the musical compounds is in evidence almost nightly at theatres where seats are at a premium for this class of entertainment.

PLAYS WITH MUSICAL FEATURES.

New songs add to the attractiveness of "The Silver Slipper," which is in its fifteenth week at the Broadway.

"Mr. Blue Beard" is a brilliant spectacle at the Knickerbocker.

Jerome Sykes, after two months, still holds his own in "The Billionaire" at Daly's.

"Florodora," like the brook, runs on forever. It ripples nowadays at the Academy.

"The Wizard of Oz" at the New Majestic seems in for a long run.

The "cocktail and the Constitution follow the flag" in "The Sultan of Sulu," and crowds follow crowds at Wallack's, where it is being played.

"A Chinese Honeymoon" is a more permanent affair than American honeymoons. It has continued now for 300 performances at the Casino.

"Twirly Whirly" and "The Stickiness of Gelatine" promise to run out the season at Weber & Fields's.

"When John Comes Marching Home" will only remain at the New York for two more weeks.

De Wolf Hopper in a musical melange based on the Pickwick Papers holds forth at the Herald Square.

FARCE, COMEDY, AND DRAMA.

Annie Russell is pleasing old admirers and wining new ones in "Mice and Men" at the Garrick.

Robert Marshall's play, "The Unforeseen," provides a vehicle in which the stock company has now been playing for four weeks at the Empire.

Souvenirs will mark the fiftieth performance of "The Girl with the Green Eyes," at the Savoy, on Tuesday evening.

"The Bird in the Cage" at the Bijou provides opportunity to see Edward Harrigan in a rôle that recalls his triumphs of earlier days.

"Jim Bludso," with the burning of the "Prairie Belle," has "plenty of go" at the Fourteenth Street Theatre.

A special matinée of "Mary of Magdala" is announced for Wednesday at the Manhattan.

Louis Mann presents one of his German impersonations in "The Consul," at the Princess.

Three months of prosperity is the record of "The Darling of the Gods" at the Belasco Theatre.

E. H. Sothern will give a special matinée of "Hamlet" at the Garden on Tuesday. At other performances during the week he is appearing in his last season's success, "If I Were King."

Julia Marlowe enters upon her last fortnight with "The Cavalier" at the Criterion to-morrow night, on which occasion "Georgia Night" will be celebrated.

"The Little Princess" is a pronounced success at the Criterion, where it is played every afternoon, except Saturdays. To-morrow afternoon many children of the stage will attend the matinée.

AT OTHER HOUSES.

The attractions at the Harlem Opera House for this week will be Mary Mannering in her Clyde Fitch play, "The Stubbornness of Geraldine," in which she made a success at the Garrick Theatre recently. Miss Mannering's rôle is that of a typical American girl, whose "stubborness" consists solely in fidelity to the misunderstood man that she loves. The production at the Harlem Opera House will be identical with that given at the Garrick Theatre.

Charles Frohman will present William H. Crane at the Grand Opera House to-morrow night in the dramatization of Westcott's "David Harum." The play had its original run of nearly four months in this city at the Garrick Theatre, and opened its present tour at the Criterion Theatre. The production to be made at the Grand Opera House will not differ from the one previously seen on Broadway. Mr. Crane has just completed a tour of the South in this play.

"The Volunteer Organist" is the play billed for the West End Theatre for this week. It is described as a pastoral play treating of life in rural Vermont.

"Moths," a dramatization of Ouida's novel of the same name, will be the week's revival of the stock company at the Murray Hill Theatre.

"Nevada," or Devil's Mine, a companion piece to "M'Liss," is the attraction for the week at the American Theatre.

"Hearts Adrift," a melodrama dealing with thieves and other things, is booked as the attraction for the New Star.

"The James Boys in Missouri" will play at the Third Avenue this week.

Joe Welch, as "The Peddler," will be the week's attraction at the Metropolis.

"Up New York State" will be seen this week at the Columbia Theatre, Brooklyn.

Proctor's Theatres—"Hearts Are Trumps," by Cecil Raleigh and Arthur Collins, will be seen at the Fifth Avenue, with a cast of fifty persons and elaborate scenery. Augustus Pitou's Irish comedy, "Garret O'Magh," is revived at the Fifty-eighth Street Theatre, with Edna A. Crawford and Ned H. Fowler in the leading rôles. The vaudeville bill at Proctor's will be made attractive by an all-star bill. At the One Hundred and Twenty-fifth Street "The Bells of Haslemere" is revived.

IN VAUDERVILLE HOUSES.

Keith's patrons next week will see Charlie Grapewin in what probably will be his last vaudeville appearance, as he is to be starred in farce comedy next season. Papinta is held over for another week. Stephen Grattan and Maud White present their sketch, "Locked Out at 3 A. M." Tom Lewis and Sam Ryan are back in the variéties again after a long absence, offering their skit, "The Two Actors."

Bob Manchester's "Crackerjacks, Burlesquers" are coming for a week's stay at the Dewey, commencing Monday matinée. Twenty-two women are in the cast to help entertain. The show opens with a first part entitled "Dr. Munyon Outdone." The variety element introduces Kelly and Adams, the Mayo sisters, Collins and North, and the Glockers, baton experts. As a special feature the management has engaged the "Parson Price" of the common wrestler, who will meet all comers at each performance, offering $25 to any man he fails to throw in fifteen minutes.

At Huber's Museum Signor Dekenzo, a lion tamer, will give an exhibition with three lions, entitled "The Lion Hunt." Ella Morris, ventriloquist; Prof. Stanley's troupe of performing goats, Huber, the armless painter, the midget policeman, and the Chinese dwarf are in the curio hall. In the theatre the Huber stock company, headed by John B. Burke, will present "Kathleen Mavourneen." The vaudeville company includes Fannie Forum, Needham and Wood, Peters and Walters, Jerome Walz, and new pictures by the Edison projectoscope.

The management of the Eden Musée is preparing to put on the cinematograph the pictures of the Durbar at Delhi. The new group, "The Birth of the American Flag," placed in the entrance hall, has met with much favor. Betsy Ross and George Washington are the principal figures in the group. De Kolta, the wizard, presented new illusions last night.

At Hurtig & Seamon's Harlem Music Hall during the coming week will be seen Ellis Proctor Otis, in her dramatic offering; Merville, Booth, and Elmer in "The Two Juliets"; Genero and Bailey in "The Victim of Circumstances"; Hal Stephens in his portrayal of stage celebrities, including Joe Jefferson, Weber and Fields, and a number of others will be on the programme.

POLYTECHNIC AMATEURS TO PLAY

The Polytechnic Dramatic Association will give its annual performance at the Academy of Music, Brooklyn, on Friday. This year it will consist of the production of the Augustin Daly comedy, "7-20-8." The players have been trained by William Phelps Macfarlane. The cast is as follows:

Courtney Corliss	Frederick H. Lane, '04
Mr. Launcelot Burgiss	Gordon L. Pirie, '05
Paul Hollyhock	Otto W. Sartorius, '05
Signor Rinaldo Tamborini	Henry F. Journay, '05
A. Footman	Herbert T. Ely, '05
Professor Gaslegh	Robert Burns, '05
Jobbins	Walter I. Zamiya, '05
Mrs. Hypatia Burgiss	
Dora Hollyhock	Frederick P. Desesquet, Jr., '05
Flos	Everett W. Boughton, '05
Jessie	H. Ginnel Lieberthon, Special
	Otto W. Weidmann, '05

Mrs. John Stromberg's Benefit.

At the benefit to be given to-night for Mrs. John Stromberg, widow of the composer, Weber and Fields will repeat at their music hall the original song and dance with which they began their theatrical career twenty-five years ago. They have had costumes made, duplicates of the originals, consisting of short "trousers, loose coats, and the typical "song and dance" shirts and clog shoes. Their act at that time was known as "The Neat Song and Dance." The list of volunteers was further swelled yesterday by Digby Bell, Joe Welch, and Julius Witmark.

SUNDAY NIGHT BILLS.

The following theatres give concerts and vaudeville entertainments to-night:

American.	Metropolis.
Dewey.	New York.
Grand Opera House.	Proctor's.
Huber's Museum.	Star.
Harlem Opera House.	Third Avenue.
Irving Place.	West End.

DAMROSCH LECTURE RECITALS.

The series of lecture recitals on the Wagner music dramas which Mr. Walter Damrosch has been giving through January at Daly's Theatre were more largely attended than those of previous seasons. Two extra recitals are to be given this week on "Die Meistersinger," the session of Monday afternoon at 2 o'clock, when Act I. will be the subject, and Thursday afternoon, Feb. 5, he will talk on Acts II. and III. Mr. Ellison Van Hoose will sing the "Prize Song" at one recital, and the soloist for the other will be announced later.

THE PUBLIC AND BAD PLAYS.

To the Editor of The New York Times:

Having been induced by numerous highly colored and favorable reports of several respectable newspapers, your own among them, to witness one of the popular plays now having a protracted run in this city, I venture to ask why it is that respectable authors and managers continue to inject into their otherwise attractive performances matter which appeals only to the basest passions, and to present it with such open vulgarity and even indecency, such as would scarcely be tolerated in a barroom. And why is it that even our leading papers handle them so softly, making so prominent the really attractive and innocent features, but so softly veiling those portions which are nothing if not degrading and utterly demoralizing?

Is it because the people of this city and vicinity really delight in such foul representations as are found in these so-called "popular" plays now running, and that authors and managers are merely catering to the popular taste? If so, Heaven save us; and is it not time that representative papers, leaders of public opinion, who stand for decency, undertook with determination and energy to lead the public mind and call to their aid all people who also stand for decency and morality, even in public performances, by urging them to frown upon such exhibitions in every possible way, and especially by withholding their patronage? Do editors realize their responsibility in this matter? I must say that, while I am no prude, I felt ashamed to be caught in such a situation with my wife, and had we been at all aware of the flagrant violations of common decency we certainly should not have exhibited them by our presence. If the respectable papers would in proper terms, not necessarily sensational, but with such plain criticism, as they well know how to use, give their readers an adequate idea of what they might expect in specific cases, they would no doubt invoke the thanks of thousands like myself who have been attracted by more than favorable notices of these plays.

Possibly it might cut off some of the box receipts of these managers and caterers to indecency, and who no doubt are large advertisers. But, on the other hand, might it not help to teach them that success, after all, is not synonymous with vile acting and talking, and that their really wonderful stage settings and unobjectionable parts are alone sufficient to draw the crowds, and they might well afford to omit the parts that savor of open and flagrant vice, and also avoid their own questionable reputation at pandering to the same. And might they not find that their receipts would prove as large and their patrons would not be obliged to go away with a bad taste in the mouth? If the masses of our people really like it, I suppose they will have it. But do they?

INQUIRER.

New York, Jan. 29, 1903.

MR. GRAU'S WORK AT THE OPERA.

A Manager Who Has Studied Conditions and Has Theories—An Instructive Incident.

The retirement of Mr. Maurice Grau from the management of the opera now seems to be a certainty. Whether it be for a longer or a shorter time, it can hardly fail to be to the loss of opera lovers in New York. Mr. Grau has been almost a unique member of his profession in that he has made operatic management, since he has had the control, a profitable business. The saying that Italian opera spelled ruin was an old one when he took the reins of management at the Metropolitan Opera House and proved that it was not necessarily so. Mr. Grau's management for the last eleven years has been a success not only from a business point of view, but in many ways it has resulted in artistic success such as will mark his musical censuship as a memorable one. He began his work at a time when the owners of the Opera House had wearied of the German opera that had made so deep an impression and wrought so profoundly upon the taste and ideals of the New York public. There was a change in the spirit that ruled at the big temple of music, and the more commercial ideas that were imported into the management, it was thought, would necessarily see the wreck of the artistic fabric that had been built up there. The methods were indeed changed, and in many respects for the worse; but the achievements of his eleven years of work have been noteworthy. They have been in some ways a necessary complement of the German seasons that preceded them.

Mr. Grau began deliberately with the intention of compelling public support by the attractiveness of his artists' names. He started out to secure the most famous that could be induced to come to this country for money, and he went to the furthest extreme, probably, in providing "galaxies" of great names to illuminate his prospectuses and house bills. He gauged accurately the public taste that in New York had been accustomed to enjoy the best that the world could offer. This is no doubt far from an ideal basis for an operatic institution, and one not in the least calculated to foster the establishment of opera on a permanent footing. But Mr. Grau has been concerned only with conditions and not with theories, and has labored only for the present, not for the future.

The value of what he has done is to be measured chiefly by the inspiration and stimulus that some of his great singers have brought us. For Mr. Jean de Reszke alone he is entitled to unceasing gratitude; and in some of the performances of Wagner's works that he has given Mr. Grau has left an ineffaceable impression. For he has joined to his theory of the potency of great names another that has involved reckoning with what the political economists call the "effective demand." He has been as one without prejudice in this respect. It is pretty well known that Mr. Grau personally cares only for lyric drama of the ancient type; but discovering that the years of German opera had left their ineradicable mark upon the tastes of many of the community, he saw to it that these tastes were satisfied. That this perspicacity has not been to his loss is an easy conjecture for those who have followed the performances.

In considering Mr. Grau's success there are several factors that need to be remembered. It is commonly said that he has done single handed what only the managers of Continental Europe have been able to do with the aid of Government and municipal subsidies; but this is not quite true, for the terms upon which Mr. Grau obtains the Opera House amount almost to a subsidy. They at all events put him at a considerable advantage over the theatrical manager who has expenses from which Mr. Grau has been relieved. In comparing him with his predecessors and one-time rivals, too, it must not be forgotten that for various reasons the circumstances of his career at the Metropolitan have been exceptionally favorable in that he has had practically no effective opposition. It was very different in the older days, when generally two and sometimes three operatic managers with imported companies of expensive singers were contending for public favor and patronage in New York.

An instructive incident recently occurred at the Metropolitan Opera House. One of the new tenor singers who had been heralded as one of the important acquisitions of the season, Mr. Emil Gerhäuser, has retired from the company and has gone to Paris with the avowed intention of learning how to sing. From which it appears that Mr. Gerhäuser has decided that he does not at present know how, and presumably that he had to come to New York to discover that fact. Now, Mr. Gerhäuser is a singer of distinction in Germany. He has been a member of the Munich Royal Opera company. He has spent much time in Baireuth, studying the Wagnerian works under the tutelage of the powers that now control the Festival Theatre, and affect to be the only true fountain head of Wagnerian interpretation and of the true Wagnerian manner of song. He has sung for years at Carlsruhe, with Mottl, one of the chief lights of the new Wagner conductors, bound by intimate ties to the forces at Baireuth. He has appeared several times at the Baireuth Festival performances and at the rival performances at the Prinsregenten Theater in Munich. These are all places where they profess and are expected to set forth the finest achievements in dramatic song that Germany can produce.

With all that to his credit, he comes to New York, makes two appearances in one opera, and suddenly sees a great light; recognizes that there are some of the fundamentals of the art of singing that he has never mastered, and posts off to the place where he believes that he can best learn these things. It is said that he hopes to induce Jean de Reszke to impart to him the necessary practical knowledge. All this is one of the most creditable incidents in which a tenor singer has been concerned that has transpired in a long while. It speaks loudly for the intelligence and artistic sincerity of Mr. Gerhäuser, and reopens the possibility of a future for him that never could have been his if he had been content to continue upon the lines that he has been following in Germany. New York has opened the eyes of many foreign artists who have come here in the confidence that a European reputation would assure them of immediate success in this city. Over and over again it has been shown that this public has a standard of its own; ideals of its own as to excellence in musical art that must be met; that these are such that it will not accept what has been approved by Paris, London, Berlin, Vienna, Baireuth, unless it does meet them, and that success in those and the other musical centres of Europe counts for very little in establishing here the position of an artist who relies upon it. If that success is founded upon the qualities that are requisite to satisfy this public, it will be repeated here; but if not, no amount of reputation, not even the noisiest proclamations of it, will suffice.

German singers have been among the slowest to recognize this, and have been among the most surprised to find that they have not been accepted here at the valuation at which they have passed current at home. There is a certain provincialism in the career of such singers, who, unless they are artists endowed with an unusual breadth and activity of mind, move within a small circle of experience and routine untouched by ideas that are prevailing outside of it, and without opportunity of hearing and profiting by much that is stimulating in art. They become the idols of their local public, and when they are brought before the more cosmopolitan of this city they find that their art is not enough.

There have been not a few who have found in this New York public, the forces that are at work here, and the intercourse with the greater artists who have made their impress here, a potent stimulus to artistic advancement, and who have gone back increased in their power and stature as artists.

RICHARD ALDRICH.

AT THE OPERA.

At the Metropolitan Opera House this week there will be no new production. The successful production of "Ernani" will be repeated to-morrow evening, with Mme. Sembrich as Elvira. On Wednesday Miss Suzanne Adams will appear as Marguerite in "Faust."

Monday Evening.
"ERNANI."
(In Italian.)

Elvira	Mme. Sembrich
Giovanna	Miss Bauermeister
Ernani	Mr. de Marchi
Don Carlo	Mr. Scotti
Don Ruy Gomez de Silva	Mr. Edouard de Reszke
Magno	Mr. Vallin
Don Riccardo	Mr. Vanni

Conductor, Mr. Mancinelli.

Wednesday Evening.
"FAUST"
(In French.)

Marguerite	Mme. Suzanne Adams
Marta	Miss Bauermeister
Siebel	Miss Carrie Bridewell
Faust	Mr. Alvarez
Valentin	Mr. Scotti
Mephistopheles	Mr. Edouard de Reszke
Wagner	Mr. Dufriche

Conductor, Mr. Mancinelli.

Friday Evening.
"AIDA."
(In Italian.)

Aida	Mme. Gadski
Amneris	Mme. Louise Homer
Una Sacerdotessa	Miss Mairiy
Radames	Mr. de Marchi
Amonasro	Mr. Campanari
Ramfis	Mr. Edouard de Reszke
Il Re	Mr. Journet
Un Messaggiero	Mr. Vanni

Incidental dance by the Corps de Ballet.
Conductor, Mr. Mancinelli.

Saturday Afternoon.
"LA FILLE DU REGIMENT."
(In French.)

Marie	Mme. Sembrich
La Marquise de Berkenfield	Mme. Van Cauteren
Tonio	Mr. Salignac
Sulpice	Mr. Gilbert
Hortensius	Mr. Dufriche
Un Caporal	Mr. Bigué

Conductor, Mr. Pion.

To be followed by
"PAGLIACCI."
(In Italian.)

Nedda	Mme. Fritzi Scheff
Canio	Mr. Alvarez
Tonio	Mr. Scotti
Peppe	Mr. Reiss
Silvio	Mr. Declery

Conductor, Mr. Pion.

Saturday Evening
"LOHENGRIN."
(In German.)

Elsa von Brabant	Mme. Gadski
Ortrud	Mme. Schumann-Heink
Lohengrin	Mr. Anthes
Friedrich von Telramund	Mr. Van Rooy
Der Heerrufer des Königs	Mr. Muhlmann
Heinrich der Vogler	Mr. Blass

Conductor, Mr. Alfred Hertz.

METROPOLITAN SUNDAY CONCERT

At the popular concert to-night the soloists will be Mmes. Fritzi Scheff and Bridewell, Mr. Campanari, and the Bohemian violin virtuoso, Kocian, (his last appearance at these concerts,) who will play Joachim's violin concerto "in the Hungarian manner" and three other numbers. An interesting feature of the programme will be the first performance of an "Indian Rhapsody," by Mr. Miersch, an American composer. Mr. Alfred Hertz will conduct.

The programme will be as follows:

Overture—"Die Fledermaus"	Johann Strauss
Song—Figaro's aria from "Il Barbiere di Siviglia"	Rossini
Mr. Campanari.	
Song—"Air des Oiseaux," from "Pagliacci"	Leoncavallo
Mme. Fritzi Scheff.	
Air—"Amour, viens aider," from "Samson et Dalila"	Saint-Saëns
Miss Carrie Bridewell.	
Indian Rhapsody, (manuscript)	P. T. Miersch
(Composed on themes selected from the songs and dances of the Ute Indians.)	
Violin Concerto, (in the Hungarian style)	Joachim
Kocian and Orchestra.	
Waldweben, from "Siegfried"	Wagner
Songs—	
(a) "Mai Morning"	Denza
(b) "Slumber Song"	Tito Mattei
Miss Carrie Bridewell.	
Air—"Toreador Song," from "Carmen"	Bizet
Mr. Campanari.	
Songs—	
(a) "Die Thräne"	Rubinstein
(b) "My Shadow"	Henry Hadley
Mme. Fritzi Scheff.	
Selections—	
(a) Canzonetta	D'Ambrosio
(b) Romance	Svendsen
(c) Scherzo (Tarantella)	Wieniawski
Kocian.	
Overture—"Euryanthe"	Weber

ADA CROSSLEY'S RECITAL.

Miss Ada Crossley, the Australian contralto, who has already made several successful appearances in this country since her arrival from England a fortnight ago, will give a recital in Mendelssohn Hall Friday evening, Feb. 6, beginning at 8:30. Mr. Isidore Luckstone will be at the piano, and the following programme will be presented:

Intermo all'idol mio	Antonio Cesti
Hark the Echoing Air	Purcell
(Arranged by Alfred Moffat from the Opera of "The Fairy Queen.")	
Caro mio ben	Giordani
Se Florindo è fedele	Arne
Die junge Nonne	Schubert
Paysage	Reynaldo Hahn
Allerseelen	Richard Strauss
An die Vergissmeinnicht	Grieg
Liebestreu	Brahms
A Garden Song	Charles Willeby
Phillis at Corydon, (Minuetto)	Giovani Martini
Oh, That We Two Were Maying	Hubert Parry
Battle Hymn	C. Villiers Stanford
Since We Parted	Francis Allitsen
New Year's Song, (17th Century)	Albert Mallinson

MME. ROGER-MICLOS'S CONCERT.

Mme. Roger-Miclos, the French pianist, will be heard here for the first time on Tuesday at the Waldorf-Astoria in the following programme. The orchestral numbers will be conducted by Mr. Walter Damrosch:

Academic Overture	Brahms
Damrosch Orchestra.	
Concerto in C minor	Beethoven
Mme. Roger-Miclos.	
Le dernier sommeil de la vierge	Massenet
Melody in F, (arranged by d'Indy)	Rubinstein
Scherzo-Valse, (from "Roshell")	Moszkowski
Damrosch Orchestra.	
Concerto in G minor	Saint-Saëns
Mme. Roger-Miclos.	

WETZLER SYMPHONY CONCERT.

The fourth Wetzler Symphony Concert will be given at Carnegie Hall on Thursday evening, at 8:30 o'clock. Prof. Hugo Heermann, the distinguished German violinist, who has just arrived in this country, will be the soloist, and make his first appearance in America upon this occasion. Mr. Wetzler was for a number of years a pupil of Prof. Heermann at Frankfort. Following is the programme:

Symphony in E flat	Mozart
Concerto for violin	Beethoven
Macbeth, tone poem, (new, first time)	L. Von Geczmy
Bacchus March, symphonically arranged	Liszt

H. O. C. KORTHEUER'S RECITAL.

Hermann O. C. Kortheuer, pianist, formerly of New York, who has been absent from this city for a number of years, has returned, and will give a concert at Mendelssohn Hall on Thursday evening. In this he will have the assistance of Mrs. Sarah Levin, soprano, who will sing two new songs by him. Following is the programme:

Prelude, Fugue and Allegro	Bach
Sonata, Op. 109	Beethoven
Die Allmacht	Schubert
Impromptu, Op. 90, No. 4	Schubert
Fantasie, Op. 49	Chopin
Three Mazurkas	Chopin
Prelude, F flat major	Chopin
Scherzo, Op. 39	Chopin
The Lute	Kortheuer
Polonaise in E	Liszt
Love Song	Kortheuer

MISS KENNEDY'S SONG RECITAL.

Miss Maud Louise Kennedy will give a song recital at Mendelssohn Hall on Thursday afternoon at 3 o'clock, in which she will have the assistance of Mr. Albert Quesnel, tenor; Mr. Charles O. Deis, pianist, and Mme. Luisa Cappiani. The programme will be as follows:

Piano solo—Opus 27	Beethoven
Mr. Charles O. Deis.	
Sos Timide, "Mignon"	A. Thomas
(a) Die Lotosblume	Schumann
(b) O Sonnenschein	
"Ah! io so," "Flauto Magico"	Mozart
Miss Maud L. Kennedy.	
(a) Aria—"L'Africaine," (first time in America)	Cilèa
(b) The Wildflower	Franco Leoni
Mr. Albert Quesnel.	
Spring, Sembrich Waltz	Joh. Strauss
Miss Maud L. Kennedy.	
Short remarks on Phonation and Vocal Sounding Board	
Mme. Luisa Cappiani.	
Shadow Dance—"Dinorah"	Meyerbeer
Miss Maud L. Kennedy.	
Fuitaine	Chopin
Mr. Charles O. Deis.	
"Ah Morir," Duet, "Ernani"	Verdi
Albert Quesnel, Miss Maud L. Kennedy.	

ARTOMMAS'S HARP RECITAL.

Aptommas, a virtuoso performer on the harp, will give a recital at Carnegie Hall on Thursday afternoon at 3 o'clock. The programme will be as follows:

Introductory prelude—Miscellaneous	
Songs Without Words	Mendelssohn
Embodied Fantasia, (Weber melodies)	Aptommas
"Home, Sweet Home"	Aptommas
American Airs	Aptommas
The Harmonious Blacksmith	Handel
Etude and Tarantelle	Aptommas
Britannia, (English airs)	Aptommas

YOUNG PEOPLE'S CONCERT.

The Fourth Symphony Concert for Young People will take place on Saturday afternoon, Feb. 7, in Carnegie Hall, under the direction of Mr. Frank Damrosch. The soloist will be Miss Maud MacCarthy. The following programme will be performed:

Pastoral Symphony, No. 6, in F	Beethoven
Adagio	Mozart
Miss Maud MacCarthy.	
Two Hungarian dances	Brahms

Miss Metcalfe's Song Recital.

Miss Susan Metcalfe will give a second song recital in Mendelssohn Hall on the afternoon of Thursday at 3 o'clock. Her programme will be as follows:

Ombra mai fu	Handel
Recitativ and Arie, (from Don Giovanni)	Mozart
La violetta	Scarlatti
Phillis	J. Young
Shepherd, the demanyer vary	T. Brown
Aminta	
Non je s'ai plus au bois	18th Cen. Bergerettes
Wie Melodien zieht es mir	
Liebestreu	Brahms
Wie bist du meine Königin	
Die Mainacht	
Gute Nacht	
Lieblich Wangen	
Les Roses d'Ispahan	Faure
Nöl	
Vogel im Walde	Taubert
Allerseelen	R. Strauss
Standchen	

NEW YORK FESTIVAL CHORUS.

The New York Festival Chorus of 400 voices will give a free performance to men only of Gaul's "Holy City" in Carnegie Hall this afternoon, Feb. 1, under the direction of Tali Esen Morgan. The soloists will be Ahita Rio, Mrs. Byrne-Ivy, Edward E. Johnson, and Dr. Carl E. Duff. The instrumental parts will be given by the New York Festival Orchestra. J. H. Von Nardroff at the organ, and Alice Walter Bates at the piano.

The Last Dolmetsch Concert.

Mr. and Mrs. Arnold Dolmetsch are to make one more appearance in this city before their return to England at the Manhattan Theatre on the afternoon of Feb. 4. For this occasion Mr. Dolmetsch is arranging a new programme of old music, none of which has been heard at his previous concerts. These artists will return to England on Feb. 7, the day following their final appearance.

THE KNEISEL QUARTET.

Works by Mozart, Brahms, and Beethoven at Its Fourth Concert.

The fourth concert this season by the Kneisel Quartet will be given at Mendelssohn Hall on Tuesday evening at 8:15 o'clock. The programme will be as follows:

Quartet, F major, for oboe and strings	Mozart
Trio Op. 8, B major, for piano and strings	Brahms
Quartet, Op. 132, A minor, for strings	Beethoven

In Mozart's quartet the oboe will be played by Mr. Georges Longy of the Boston Symphony Orchestra, and in Brahms's trio Mr. Arthur Whiting of this city will play the pianoforte.

The Mozart quartet was given here a few years ago by Mr. Kne

WHAT in the world is 'Jim' Keene doing over there, talking to De Courcey Forbes?" asked a friend of Col. Phil Thompson's the evening last week at the Waldorf.

"Oh, nothing in particular," answered the Colonel. "He's just resting his mind."

✦✦✦✦✦✦

SUPREME COURT JUSTICE WOODWARD, hearing Sturgis President Cantor deploring the fact that he had to attend a public dinner, where he might have too good a time, said:

"That reminds me of an old acquaintance up in Fredonia whose weakness was strong drink. The town voted no license, and to obtain liquor it was necessary to take a trolley car to Dunkirk, three miles away. One night I saw my tipsy friend waiting for the Dunkirk car. I saluted him, and inquired where he was going:

"'Down to Dunkirk to get drunk,' he shouted, and then he added solemnly: 'But gee, how I dread it.'"

✦✦✦✦✦✦

CONGRESSMAN FOSTER of Vermont was reared on a farm in the village of Barnet. His opportunities for work were many, his pastimes few. He was always glad to be sent on errands, for that meant a horseback ride on Old Ned. Out of sight of the farmhouse he would do his best to speed the old horse, but long service ahead of the plow had not fitted Ned to give a race track performance. He would plod along, and the alder switch which belabored his flanks brought no fleetness to his hoofs. So young Foster besought his father the privilege of wearing a pair of old-fashioned spurs which had not touched horse flesh for years.

"I don't mind," said the old farmer, taking one of the spurs from its resting place. "Put it on."

"Don't I want both of them," persisted the boy.

"No you don't," replied the father. "If you can get one side of that old horse to move you needn't worry about the other side keeping up."

✦✦✦✦✦✦

MR. GOODWIN," asked a young lady at a Lotos Club reception, "why do actors always say so many clever things?"

"Because, my dear Miss Query, they have good memories," responded the comedian.

✦✦✦✦✦✦

LORD CHARLES BERESFORD was talking to some members of the Old Guard at the ball last Monday night, and of fashionable weddings. Lord Charles said he had attended one a few weeks before he sailed for New York, and as he followed the bridal party down the church steps he heard a woman standing on the sidewalk say: "The bride has a tremendous trousseau; it's the talk of the town."

"God bless us and all harm!" exclaimed her companion; "where has she it, the poor creature?"

✦✦✦✦✦✦

WILLIAM C. DOLE, instructor of boxing at Yale, dropped into that dairy lunch room near the campus facetiously known as the Yale Kennel Club, because frankfurters are its chief stock in trade. While he was deliberating what to order, a student came in for a lunch to take to his room.

"Two egg sandwiches to go out," he ordered.

"Two egg sandwiches to go out," the attendant repeated sonorously to the cook.

This was a suggestion to the exponent of "the manly art," who was, however, to do his eating on the spot.

"One egg sandwich—to go down and out!" he announced appropriately.

✦✦✦✦✦✦

PRESIDENT JACOB GOULD SCHURMAN of Cornell University tells this story on himself: One Fourth of July a few years ago the President's eldest son, Robert, had exploded all of the firecrackers that he had provided for the occasion much before dark. The youngster and his little cousins were very anxious for more celebration, so young "Bob" sought out his father and asked for more money wherewith to buy firecrackers.

"Papa, will you please give me some more money? My firecrackers are all gone, and it isn't 4 o'clock yet."

"I will, my son, if you can tell me what you are celebrating with all of these fireworks," replied Mr. Schurman, who, by the way, was born in Nova Scotia, while the boy was born in New York State.

"I can do that easy enough, pop," said the boy. "This is the anniversary of the day we licked you fellows."

The money was at once forthcoming.

AT A HEARING before the Senate Cities Committee on the Elmira Gerrymander bill in Albany last week John B. Stanchfield, who opposed the bill, stated that the provision in it for changing the time for the beginning of the fiscal year would probably necessitate a bond issue to meet current expenses for the four months' period which would be left unprovided for in the present budget.

"The people of Elmira," said Mr. Stanchfield, "are already heavily burdened with taxation and could not afford to have a bond issue. It is not so long ago that the city was visited by disastrous floods. The streets of the city were covered with water. You could row into the corridor of the principal hotel and register your boat."

After the hearing Senator [illegible] said to Mr. [illegible]

the Democrats to carry Elmira when all the rest of the up-State section has gone Republican has given me a high opinion of them. But after that story you told about the Elmira flood I am convinced that I have never done them full justice. Democrats who can live and thrive where there is that much water are nothing short of heroes."

✦✦✦✦✦✦

WHEN Lemuel E. Quigg went to Congress he was preceded by a reputation as a "spellbinder," who had overturned a large Democratic majority by his eloquence. So when it was announced one day that Quigg was to make a speech on the tariff there were plenty of listeners. The Republicans encouraged their new champion with applause until he was finally flying high in his oratory. The Democrats remained silent, but vigilant.

Mr. Quigg arose to a splendid burst of eloquence, and at the end of it he turned to the Democratic side, shook his hand at them, and shouted:

"And now the gladiators of the Democratic Party, booted and spurred and armed cap-a-pie, are leading an assault upon the industries of the country."

There was a burst of applause from the Republicans. Then Representative Caruth of Kentucky walked out in front of the Speaker's desk.

"May I ask the gentleman a question?" he said.

"Certainly," replied Mr. Quigg.

"Well, I'm curious to know," drawled Mr. Caruth, "in what land and what age gladiators were booted and spurred and armed cap-a-pie."

There was a shout of laughter on the Democratic side, and Quigg brought his speech to a quick conclusion.

✦✦✦✦✦✦

MARSHALL P. WILDER was recently engaged by Mr. Vanderbilt, whose charity is displayed in many ways of which the general public wots not, but little, to entertain the inmates of one of the Keeley Institutes. After the entertainment the humorist was taken on a tour of inspection about the place. Some of the patients were still highly delirious, and shouted in their mad revings in a manner to make even the humorist shudder. One of them suddenly burst from his room that it was full of snakes, and was wild in his fear of the imaginary reptiles. Suddenly he changed his tune and declared that there was a woman in his room, and then relapsed into silence.

"She must have been a snake-charmer," murmured Wilder, as they moved on to the next ward.

✦✦✦✦✦✦

JUDGE KEOGH of the Supreme Court recently had before him on trial an "accident case" where the plaintiff's claim was that the plaintiff was thrown from a car because it was started too soon, and before she was fairly on board. The defendant claimed that the plaintiff jumped while the car was in motion, and so sustained her injury through her own fault. Judge Keogh delivered a charge which the plaintiff's attorney thought might tell against him with the jury. In an effort to counteract this and to have the last word to the jury favorable to his client, he requested the Judge to charge the jury that they must take into consideration the inherent probability of each story.

"I so charge," said Judge Keogh, and, to the discomfiture of the lawyer, who tells the story now with much relish, the Judge added, "also the inherent improbability of each story."

The jury promptly brought in a verdict for the defendant.

✦✦✦✦✦✦

PROF. LESLIE J. TOMPKINS of the University Law School was trying to impress his class in bills and notes with the fact that when a bill or note is drawn to the order of a person, that person must be in esse; in other words one capable of indorsing the instrument in order to make it a properly drawn negotiable instrument. In trying to drive the point home he asked one of the students whether an instrument drawn to the order of the "Town Pump" would be a good one.

"Yes," replied the student.

"Well, if it is good, who can indorse it?" asked the professor.

"Why," replied the student, "the sucker in the pump!"

✦✦✦✦✦✦

MRS. ANNIS FORD EASTMAN, who succeeded the Rev. Thomas K. Beecher as pastor of the Park Church, Elmira, N. Y., has had some curious experiences in her novel position, but acknowledges that the following incident almost caused her to laugh in a parishioner's face.

"At the conclusion of a sermon," says Mrs. Eastman, "an impulsive young woman hurried to the front of the church where I was talking with a little group, and anxiously inquired if she could kiss me. I was totally unprepared for such a demonstration of affection, as I had never seen the young woman before, but I acquiesced with the best grace I could. What was my surprise after the salute—which was given with much warmth—to hear her exclaim, with a sigh:

"'Oh, how often I've wished to kiss the minister!'"

✦✦✦✦✦✦

MAYOR SEAMAN of Perth Amboy, who is Treasurer of a local savings bank, tells a story about the Rev. James L. Lancaster, rector of St. Peter's Episcopal Church there. The parson, who used to be a Presbyterian preacher, is by no means "slothful in business" while serving the Lord, and for that reason among others is Vice President of the bank and a member of the Loaning Committee.

An application was received recently from Trustees of the First Presbyterian Church for an additional loan on bond and mortgage to be used in completing their new edifice. The reverend gentleman was asked, in committee, what he thought of it.

"Well," said he, "the financial risk is good, for the property is worth three times the amount of the loan. The moral risk is all right, for they are good people. Then again, they are predestinarians. But I do not lay so much stress on the fact that they believe they are predestinated to pay this debt as I do on their belief that they are predestinated to go to hell if they don't."

✦✦✦✦✦✦

BISHOP POTTER upon coming out of St. Michael's Church a few Sundays ago saw an elderly gentleman, bareheaded, standing talking to some ladies in front of the church. Bishop Potter called to the man: "Put on your hat." A few days later the Bishop received a letter which read as follows:

"I am the man whom you addressed last Sunday, and whom you imperiously told to put on his hat. Threescore and ten years ago Gen. Andrew Jackson was officially received in the City Hall. Anxious to see the ceremony, I climbed up on the window and was surveying the scene when Gen. Jackson saw me, and called to me: 'Get down from there, you little brat; you will break your neck.' The task was decidedly imperious, but long ago I forgave Gen. Jackson, and on reflection I have concluded that his advice was very good, even if the manner was offensive. I am inclined to take the same view as to your remark to me last Sunday. I bear you no ill-will on account of it."

To this letter Bishop Potter sent the following reply: "My Dear Sir: If you are eighty-five years old, my admonition to you to put your hat on was a very timely one; and whatever its 'imperiousness' I hope you will be careful always to remember it. With very best wishes for the new year, sincerely yours, H. C. Potter."

✦✦✦✦✦✦

DR. ANDREW J. McCOSH was in his college days a famous athlete. He could run faster, kick a football further, and jump higher than any man in Princeton. Publicly his father, President McCosh, took no notice of Andy's achievements. That he privately rejoiced in his son's prowess the students learned in this way:

"Jimmy," as the President was familiarly called, though exceedingly courteous, was given to fits of abstraction in which he entirely forgot his surroundings.

Once, at a reception in his home, apparently forgetful of all the world, he was pacing up and down the room with head bent and hands interlocked behind his back. Suddenly he walked up before a young lady and asked:

"How tall are ye?"

In an embarrassed way she replied: "Why, doctor, I'm—I'm five feet two inches."

"Me son Andy could jump over yer head," said the doctor, and immediately resumed his walk.

✦✦✦✦✦✦

THE late N. G. Gonzales, editor of The Columbia (S. C.) State, one day heard a number of men in front of his office discussing the various Tillmanite candidates for office. Leaving his office, Mr. Gonzales walked up to the men, and in his quiet voice said:

"Gentlemen, please don't discuss that subject here; some ladies might overhear you."

✦✦✦✦✦✦

GOV. ODELL tells this story of a New-York parson well known for the extremely optimistic view he takes of other men's misfortunes. One day this hopeful divine was called in to administer spiritual comfort to an Irishman who was lying in the emergency hospital at Fishkill Landing. The poor fellow had lost both legs in an accident in a stone quarry, and was taking what the saintly doctor considered an impassioned view of his prospects.

"Shure, I dunno but you're right," replied the fellow glumly. "'Twould have been a dom sight worse if I'd been a chorus girl."

✦✦✦✦✦✦

EX-LIEUT. GOV. WOODRUFF, at the Lincoln Club, Brooklyn, was asked by a quizzing fellow-member if he knew the reason why the inhabitants of their borough were called Brooklynites.

"To be sure I do," promptly replied the genial "Tim," with his most expansive smile. "Because—barring election day—night is the only time they are ever there!"

✦✦✦✦✦✦

ARCHBISHOP FARLEY is naturally a firm believer in the practical value of a strict observance of the rules of the Catholic Church. Discussing the matter recently, the Archbishop told this story:

"I had once in my congregation an Irish coachman with a great fondness for drink, which all his efforts combined with mine could not quite overcome. His employer, a non-Catholic and a most kindly man, remonstrated with him.

"'Timothy,' said he one day, 'what good does this churchgoing do a man like you? It was only last Sunday you went to communion, and yet last night you were shamefully drunk.'

"Tim was abashed for a moment, but he returned with this reply: 'Dye see the jacket I have on? It's greasy and dirty and smells of the stables. But what would it look like if the old woman had not washed it last Monday?'"

✦✦✦✦✦✦

"Say, Central," said the Colonel, "do you think I look like an undertaker?"

"Oh, you wouldn't do at all for an undertaker," replied a silvery voice. "You'd put the mourners in such good humor that the corpse would feel slighted and raise a row."

DAME COLUMBIA (to South Carolina)—"The question is paramount. Will you continue to condone that creature or shall justice be done?"—Minneapolis Times.

THE MAILED FIST.

This is about the way it seems to strike the British Public.—Newark News.

THE EDUCATION OF NICODEMUS

NICODEMUS, according to standards set by beings who make work for the printing presses, is an aristocrat. Although his father came over on the St. Paul and his mother on the Lucania—rather more modern ocean voyagers than the Mayflower—he is entitled to assert his rights as a member of one of the highest families, for the entries in the books where they keep such things in London will show that his family tree is of most ample and imposing proportions.

"Best blood of his race, Sir," said the dealer emphatically, when the man came searching for that paragon in canines—a watcher of a home and gentle companion for the wife and children. "A veritable beauty he will be. Look at that jaw—look how it sticks out so beautifully. Look at that arch of a chest. Look at them legs—there won't be a straight line in 'em when he's had a chance to grow."

"Do you think he would be fierce?" ventured the man.

"Gentle as a little lamb with the wife and children, I assure you, Sir. His progenitors were used to the society of gentle folk."

"Um—yes—but—" began the man.

"But if it's a question," hastened the dealer, "of a strange man—or maybe a strange dog—coming around to bother the family, then I'll warrant he'll fight without any chip being knocked off his shoulder, and won't know when he's whipped, Sir."

"Yes," assented the man. "That's one reason why I wanted a bulldog. I guess Bladd will tell, and I'll take him."

So the money was paid for Nicodemus, and he went to Yonkers. It was a pleasant place he had as a home. There was the wife, who thought of ways to make his life happy and spent hours in petting him and feeding him with things he liked. He was pulled about a bit by the little boy, who had his own ideas of how a dog should be treated, but generally he and the boy would spend their hours together running and falling over each other until both were tired out and happy, and the boy would kiss him and caress him. There was plenty for him to do, plenty to eat, and a warm house to sleep in, so he thrived as the scion of such a distinguished house should thrive.

The man regarded the growth of Nicodemus with satisfaction. He would come home in the evening and box with Nicodemus, and delight in the muscles of steel that ran up and down the legs and back and chest of that pup. He would watch with delight as the dog would snap his great jaws together on a piece of rope or a leather strap and lug away with all his strength to carry off the trophy, never letting go nor yielding his hold to his master. That master had had Nicodemus's ears and tail made short because he had ideas of exhibiting his pet before his men friends at times, particularly to another man at the athletic club whose conversation was about three-quarters taken up with another bulldog.

When the proper time came the man devoted much time to evening strolls with Nicodemus, and once or twice reports came to the wife that he had attempted to teach their pet the meaning of the words "Sic 'im." If he did, however, there was no need for reproach, for Nicodemus seemed possessed of a fund of good humor that enabled him to make friends with all the strange dogs with which he might come into contact. Had he shown a different spirit he might have been taken down to the city and been permitted to make the acquaintance of that other much-praised dog of his race. As it was, the man gave up his evening strolls altogether, and Nicodemus was left to the agreeable company of the wife and the little boy.

Thus it went until one day there came a crisis. A strang dog—a big dog, with a rather surly expression and a reddish eye—wandered down the street in Yonkers in which the man lived. Nicodemus was fully alive to the brawnes of the newcomer instantly. He had been romping for an hour with the little boy and his spirits were high. He felt at peace with all other dogs, also, and it was only natural that he should go bounding out to meet the stranger, giving the only [illegible]

The stranger did not return the signals of friendship. He stopped, but his manner was so hostile that a dog of less happy frame of mind than Nicodemus would have realized that he was not in friendly mood. Nicodemus went hurling himself forward, however, until he was right under the nose of the big dog. Then the stranger reached down, opened a pair of capacious jaws, and picked him up by the rolls of skin and muscle on the back of his neck and shook him.

This was something new in the curriculum of Nicodemus. He squirmed and struggled in the grip of the great jaws and even yelped like a dog of far inferior blood. The stranger shook him again and again, bore him down in the road, and hit him on his back and legs until finally, with one great effort, Nicodemus freed himself and fled pell mell to his house back behind the lawn. The big dog watched him go, then trotted on his surly way.

The wife, in agitation, had been watching the action and was quick to offer her sympathy. She tried to coax Nicodemus out so that she could bathe his wounds. He would have none of that, however, lying back in the far corner of his house and licking the places where the teeth of the stranger had left sore spots. The wife brought him food and put it into his house. He pushed it out with his nose as though it offended him. Water he drank eagerly, but he would not eat, and he would not respond to the coaxings of the wife or the little boy.

"Got a yellow streak for certain," said the man, when he heard of it. "I'm going to have it out with that dealer if I can find him."

Four days Nicodemus stayed in his house. Now and then he would rise to take the water that was brought to him, or to push away the tempting food that was put inside his house. Otherwise the wife and the little boy would see him, sometimes [illegible] of the time lying with his head between his paws, his eyes wide open, and with an expression that betokened deep thought.

The fourth day he walked out. He was looking a little gaunt, and he moved stiffly as he went over the lawn and sought out a place in the bright sunshine. The boy came running from the house to greet him, but he turned with a quiet little warning growl that made the boy stop and turn away. The wife also came out and tried to caress him, but he paid no attention to her.

Along the road walked an inoffensive poodle dog. Nicodemus arose, growled, and then ran out to the street. He picked the poodle up by the back of the neck, shook it vigorously, and then let it go, to run yelping down the street, while its indignant owner demanded vengeance on the assailant. Then he strutted back into the yard, took a long drink of water, and ate ravenously of the food which the wife had placed outside the door of his house.

Yonkers has not forgotten the reign of Nicodemus that followed. There was no more of his society for the little boy or the wife. He took life too seriously to romp on the lawn. He would lie on the piazza by the hour and watch the street. Woe to the strange dog that should venture to pass, for no matter how large he might be, Nicodemus would be up and at him, and would send him away with a memory of sharp teeth set in a steel-trapllke jaw.

The wife was sad. She did not like the fighting. She did not like to see the one-time gentle Nicodemus around with evidences of wounds that might have done credit to a hero of the college "gridiron." But his scars were marks of honor to the man. The old-time walks were resumed, and often it happened that dogs that were met on the way were treated with such indignity that complaints were made to the town authorities.

Once the man took Nicodemus down to the city. He returned battle scarred again, but the man only laughed in triumphant fashion when the wife reproached him with having permitted Nicodemus to fight.

One day as Nicodemus was out on the piazza, bearing in contemptuous silence the efforts of the little boy to get him to play, he suddenly came to his feet with his nose sniffing suspiciously and every hair bristling. Next moment he was hurling himself down through the gate and out into the street, where a dog of surly disposition, with red eyes, was leisurely trotting along.

It was the same big mastiff that he had reason to remember. The mastiff stood still as before to receive him. The big dog reached out to catch the charging Nicodemus, as he had done before. He was too confident. With a growl that told of hatred that could only be quenched in blood, Nicodemus had slipped aside and under, and in a twinkling his teeth were driving into the throat of the mastiff with all the power of the jaws that were his heritage.

The gardener brought out water and poured it over the dogs. He beat Nicodemus over the head and tried to pull him away, while the mastiff thrashed around in agony, trying to free himself. But nothing would move Nicodemus. His jaws were set in the stranger's throat, and there they stayed until the big dog ceased to struggle and finally stayed still.

The wife wept again, but when the man came home he took Nicodemus out on the piazza, and talking to him seriously, patted him out the head. And Nicodemus looked up clear-eyed, and understood that he was receiving merited respect of another male creature. His revenge was complete.

Nicodemus now leads a sedate life. He often condescends to romp with the little boy, and he follows the wife around hour by hour, happy when she gives him a word and a smile. Dogs may pass as often as they like and none will be molested, while some may get a friendly greeting. Nicodemus now knows his power, and knowing, he never abuses it.

Reflections of a Cash Girl

Concerning "Gentlemen Customers."

SAY, I don't know when ter be sorriest fer a gent'leman customer—when he comes wid his wife, or when he brings in alone. When a gent comes wid his wife, he always carries a valise, and looks like he was hein' run in by a copper. When he comes alone, he looks like he was lost in Central Park, an' couldn't git back to de Zoo.

"One time when I was down in de basement wid kitchenware I seen a gent wanderin' in one aisle an' out another wid de lost kid 'took on his face.' Say, but he was fixed up ter beat de band. One er dem long coats wot fits in tight at de waist lined, a silk hat, an' a dude glass glued ter one of his tapers.

"'He ain't lookin' for no agate coffee pot,' says I. And sure enough he wa'n't, for pretty soon he axes me an' says he, dudelike, 'See here, little one, if you'll take me by de hand an' lead me to de counter where dey sells ladies' silk stockings, I'll give you fifty cents.' An' he did, too. Say, but he must have got his leg pulled. I'll bet she got er dozen pair, every length.

"Say, but de single gent customers is a dead cinch fer all de lady sales. I overheard Miss Rosenboom say ter Miss McGuire de other day dat she'd rather wait on ten gentlemen customers than one lady. 'Even if a gent don't buy nothin',' says she, 'youse can always make a mash,' says she, 'an' more dan often youse can do both.'

"Not long ago an' awful nice-lookin' swell came out de elevator lookin' fer lacey waists. Straight on thro' de aisle, sir, says de Doorwalker, 'and round by de infants' wear.' By and by he gets there, an' Miss Rosenboom, de lady sales, she walks up ter him in dat sweet, insinuating manner she gives fer a gentleman customer, yer know. She asks, Sir, but was you lookin' fer something? Perhaps I could help you.'

"Say, dere comes dat Newtown'lan' dog look in his lamps right away, an' says he: 'I was looking for ladies' silk waists,' says he. 'Could you show me one?'

"'Right dis way, Sir,' says de lady sales, walkin' actorinelike on ahead. 'We have louisine, crêpe de chine, peau de soe, and taffetas. Which would you prefer?'

"'I want a silk waist,' says de gent lookin' all balled up an' kinder nutty.

"'Yes, Sir, of course,' says de lady sales, wid a peach of a smile, 'those I mentioned were all silk. No real lady buys flannel this Winter. Everything comes in linens or silk. Perhaps you'd like to see both, Sir. Only the silk? Very well, Sir. What color did you say, Sir?'

"'Pink or blue,' says de gent, kinder gettin' active, 'and nothing plain, please. It is for a young lady, and I want it fancy and handsome.'

"'Certainly, Sir,' says de lady sales, just like she knew de whole fam'ly, 'that's what so many of our best gentlemen customers say. I think we have exactly what you want, Sir.'

"Say, then she walks over ter Miss McGuire, an' I heard her say: 'He's trying to square himself with his wife. I can always tell that kind. Now watch me kill him dead.'

"Then she goes back to de gent, an' says she: 'Here's something awfully swell in pink,' says she. 'It's a lovely little theater or dinner waist, Sir. You can see for yourself how beautifully it's made, with French knots, jabots of real lace, and rhinestone buckles. Very French and exclusive, Sir. And only forty dollars, marked down from sixty-five. And then, she might take this pink one for a change. Yes, that's certainly very sweet, Sir. So pretty and dainty for a bride, or young matron, I think. Yes, Sir. That's just what I say, too. It's so refined. I always like a quiet little thing, myself. No real lady likes anything loud, of course. Yes, that moddle is a great favorite with most of our gentlemen customers. Gentlemen always have such good taste, I think, in selecting things for ladies. That is fifty dollars, Sir. It has sold as high as seventy-five earlier in the season.

"'You'll take them both? Yes, Sir. I'm sure she'll like them. And now, what size did you say? I said, what size is the lady? Oh, you don't know. That's so like all our gentlemen customers. Well, let me see. Is she larger or smaller about the waist than I am? You couldn't tell by looking? Well, I'm sorry I can't oblige you in any other way, Sir. Do you see any lady about here that looks about her build? Oh, that tall, rather stout lady over there? All right, Sir. I should say she'd take a 36. Well, we'll send them, anyway, and if they are not right, she can exchange them.

"'The name and address, please? I didn't quite get the name. You said Miss—Oh, I beg your pardon! Mrs., of course. I was thinking of another gentleman customer, I guess. Why, no, Sir, I never should have guessed you were married, Sir, and I can almost always tell. Well, I don't know. Perhaps I might sometime. No, not to luncheon. We have less than an hour, you know. And we don't close this month until six at night. Here's my card, in case you call again, Sir. Just ask for me, and it will be all right. Good day, Sir. Elevator on this side going down.'

"Say, dat's de way dey all gits cooked de minnit dere let out alone. I guess de lady sales would like it better if more of de lady customers stayed home all de time an' let dese husbands do de whole fambly shoppin'. P'r'aps dere wives sorter get outer de game, though, when dey see de expensive garments dat hubby always sends home.

"For dere's a whole lot doin' when a gentleman customer gits pinched by a lady sales. Ma typewriter ain't in it wid her—not fer anythin', she ain't."

MABEL WARREN BRADFORD.

A Medley of Hats and Gowns

THE season has now advanced so far that there is little that is either new or novel in the sartorial world. Hats and toques, of course, are articles of dress that need frequent replacing and many and handsome are the new ones worn of late.

***

Driving up Fifth Avenue on a recent afternoon were Mrs. Townsend Burden and her younger daughter, Miss Gwendolyn Burden. Mrs. Burden's rather flat toque was in rich shades of brown, with dashes of orange and yellow velvet and plumage at the sides and back. Miss Burden's chapeau was a large picture hat of dark blue felt bound around the brim to a depth of nearly two inches with sapphire blue velvet. At the left side, where the broad brim was turned up so as to nearly touch the crown, masses of sapphire blue ostrich tips drooped over her nut brown hair.

***

Miss Elsie Woodbury Brown's wedding gown.

***

When Mrs. George Law dined at Sherry's with Mrs. Norman De R. Whitehouse her extremely slight figure was gowned in white lace. The skirt of dotted net was trimmed with a half dozen six-inch ruffles of cup lace, each an inch or so above the one below it, and each headed by white passementerie with pendants. The top ruffle was perhaps eighteen inches below the waist, which latter was outlined by a wide girdle of folded white satin, with ends at the front. The bodice of gathered net had a yoke outlined by ruffles of cup lace, and the sleeves, close about the shoulders, were formed of overlapping ruffles of the same, each four or five inches wide. The sleeves were perhaps ten inches across at the bottom. The hat topping this lace gown was a large, flat, deep red felt, with large and small red and pink roses with a bit of foliage half covering the upper brim. Roses were also used on the under brim, where it rolled up slightly at the left over her dark hair.

***

The hats worn by the bridesmaids of Miss Eleanor Russell Morris, now Mrs. Robert H. McCormick, Jr., were charming. They were large, very light and thin, and the pink frames were covered on the top of both crown and brim by ruchings of pink tulle. These brims rolled a bit and were faced with pink marabout feathers, and each had, starting from under the rolled left brim, a pink ostrich plume that drooped almost to the neck. These bridesmaids were the Misses Phoebe and Elizabeth McCormick and the Misses Eva Van Cortlandt Morris, Janet Fish, Hester C. Hone, and Helen M. Peabody. Their gowns of rose pink mousseline de soie were elaborately tucked and trimmed with pink lace. Narrow pink satin ribbon, laced in basket pattern and with spaces between the lacings, were arranged in little squares on the bodices and edged with pink lace.

***

Miss Morris's wedding gown, heavy white satin, was trimmed almost to the waist, at the sides of the skirt, with Brussels point, the long, narrow veil being of the same lace. The train was full, long, and round, and sprays of orange blossoms were fastened at the sides of the veil half way from the waist to the floor. Another large spray fastened the veil at the left side to her golden hair. A bertha frill of point lace drooped from the chiffon stock over the round yoke of satin folds set on chiffon over the shoulders. The large sleeves, of white chiffon, were very baggy at the elbows and were gathered into lace cuffs.

***

Miss Therese Iselin has a frock of white liberty satin fitted by tucks, which is elaborately lace trimmed. Lace forms the deep bertha collar that hangs over the shoulders in full folds, and also the full undersleeves. The satin upper sleeves are quite small, with vertical tucks from the shoulders to a little below the elbows. The body of the bodice is tucked to fit, and the wide girdle is also tucked. The skirt has two insertions of five-inch bands of fine lace. The upper band forms two points in front, and the lower, which is some eighteen inches from the bottom of the gown, forms a single point midway between the two points of the upper band.

***

Miss Henrietta Estelle Romaine, who married H. Edward Manville on Wednesday, dispensed with the bridal veil and wore instead a coronet wreath of puffs of white tulle with sprays of natural flowers of pinkish white peeping out in front and at each side. The wreath ended at the side of the knot of the coiffure instead of forming a complete circle. Another novelty about the gown, which was white satin crepe de chine, was the train. It was something over a yard wide, of double folds of mousseline de soie, edged with a four-inch boxplaiting of white net. It was perfectly square and trailed out beyond the gown a yard or more. It was held in at the waistline by plaits, and these plaits were carried up to the left shoulder and there ended in a raised loop. The gown's corsage had a yoke of bands of crepe de chine and faggoting. The sleeves were plaited at the top and these plaits were released at the elbow and formed a six-inch flounce over mousseline undersleeves. The skirt was laid in side plaits over an inch wide, and an inch apart. The applied flounce was also laid in plaits.

***

The matron of honor, Mrs. Clarence Levey, wore a pale blue cloth costume elaborately trimmed with cream-colored passementerie, and now and then a touch of black. The skirt was laid in deep boxplaits, with insertions of panels of cream-colored lace, crossed by passementerie loops and ornaments. Nearly the whole back of the bodice was of the passementerie covered lace. She carried a muff, long and barrel shaped, made of knife plaitings of blue chiffon. Her large flat hat had knots of blue satin ribbon at the right of the crown, and from under these two wide ostrich plumes, also pale blue, started and crossed to the left, drooping there over the ear.

***

Mrs. Arthur Kemp was at a recent fashionable wedding in a beautiful frock of rather light brown velvet, its shimmering surface broken by small ovals of a lighter hue. The skirt clung very closely and the applied flounce was outlined and headed by brown silk cords a half-inch through that formed intricate loops and designs to the depth of a foot at the widest and six inches at the narrowest part of the appliqued designs. The short Eton coat ended a little above the girdle of velvet and was elaborately braided all over with the silk cord. The sleeves were rather small at the top, but wide below the elbows, and were shaped into narrow cuffs, both sleeves and cuffs showing much of the braiding.

***

The toque illustrated was seen at one of Mrs. E. J. Collins's musicales. The brim is of plaited chiffon wound with narrow sable bands and finished by a large velvet bow in the back. The crown was of white lace over chiffon.

***

The bridal gown of Miss Elsie Woodbury Brown, now Mrs. Thomas Courtney Jenkins, was entirely different from anything heretofore seen in bridal frocks. The material was satin crepe de chine, made in a princess robe and heavily embroidered in immense white orchids, which were spangled here and there, producing the effect of dewdrops. The frock was designed by Mrs. Frank Gould Brown, the bride's mother, and some idea of the exquisite embroidery may be obtained when it is stated that it took several women nearly weeks to embroider it. The bodice had an unlined yoke of white chiffon sprinkled with pearls drops and spangles. This yoke ran down quite low in a rounded point and from it, over the tight-fitting robe, fell a flat and heart-shaped bertha of crepe de chine. This bertha was a solid mass of small white orchids and swung gracefully to and fro as she walked. Starting under this drooping point were white orchids the size of one's hand that formed a pane a short distance down the front and then spread out into two broad bands, one going each side of the gown to the bottom and then running around the long round train. The sleeves were each in two parts. The under sleeves of plain white chiffon clung to the arms, which showed plainly through it, and at the back of each arm there fell wide stole-like ends with embroidered orchids. The outer sleeves clasped the arms at the top, but some six inches below the armhole the edges separated and hung straight. The veil worn was of point lace, and was fastened to her coiffure by four diamond horseshoes and a spray of orange blossoms. The veil was placed far back and one little point of it ran up in aigrette fashion back of the low pompadour. At the sides the veil was kept in close to the knot of hair, so that nearly all of the coiffure was shown. She carried a white prayer book, sprays of white orchids, and lilies of the valley.

***

Miss Brown's maid of honor and bridesmaids, the Misses Gertrude Mason Brown, Jessie Fanshawe, and Mary Eno, wore gowns of white chiffon laid in vertical tucks. Both bodices and skirts were striped at intervals of four or five inches with two-inch bands of white velvet ribbon. They carried armfuls of pink roses. Their big picture hats were covered with ruchings and folds of white tulle, and at the left each had two full white ostrich plumes edged irregularly all around with pale pink.

***

Mrs. Frank Gould Brown wore at her daughter's wedding a black thread lace, arranged in princess fashion over white silk. Her small toque matched it, and she carried a loosely arranged mass of violets as a bouquet.

MARIE WELDON.

The costume illustrated was worn at one of the musical mornings at the Waldorf. It was of brown cloth with stitched plaits and strappings. The brown velvet flounce was bordered with heavy lace on which were embroidered huge magnolias and their leaves in different shades of brown shading into golden brown in the centres. Frills of heavy lace finished the sleeves. The hat was made of shaded brown velvet leaves with large pansies and leaves on the top.

WOMEN'S CHATTER

IT WAS a great day for the flat dwellers when they moved into a whole house. They had so much room that they did not know what to do with it. Neither did they know what to do with themselves—that is, none of them knew except the mother of the family. She found out what she wanted done before she had been in the house five minutes.

"I want a doorplate put on the front door," she said. "What is the use of having a house all to ourselves if we cannot advertise the fact by means of a doorplate?"

She asked the man who was fixing the brass trimmings in the vestibule where she could get one.

"I would not advise you to get one at all," said he. "Doorplates are old-fashioned. Very few people have them nowadays except for business purposes. Of course, there are a few old residenters who were brought up in houses where the doorplate was revered as a necessary institution, but aside from those oldtimers and professional men the only people who run to doorplates are 'jays' and foreigners. We put up a good many for them. The jays like them because they think them the correct thing and the foreigners utilize them as a sort of home directory. Their names are about a yard long and so unpronounceable that nobody would ever find out where they lived if they did not put up a doorplate as a guidepost."

The mother of the family looked thoughtful.

"Dear me," she said. "I don't see where we come in. We have lived in a flat half our lives, therefore we are not old residenters; we are not professional people, we are not foreigners, and I do hope we are not jays. I am afraid I will have to give up the doorplate, after all."

"I would if I were you," the man advised. "They are not fashionable."

***

Ella—Is that fellow a marrying man?

Stella—He will be before I get through with him.

***

A well comes from a young woman up Harlem way who, like a great many other only daughters, does the marketing for her mother. She has been doing it now for seven years and thinks she knows about what cuts of meat she wants and what she ought to pay per pound. This young woman was heard complaining one day to a friend.

"Oh, dear," she said, "the marketmen all seem to think I am a child. They tell me what I want and what I don't want, and one of them even told me I didn't know how to pick out meat. I decided it was because they knew I was ordering for mother. So one day I borrowed mother's wedding ring and went to a new market to buy the dinner. What do you suppose confronted me then? They thought I was a bride, and looked at each other and winked, and one of them whistled the wedding march, and they all patronized me more than ever. Now what in the world am I going to do? It certainly seems as if there was no consideration shown in the upper west side markets to any one but a woman whose girth and grown make it perfectly certain she is a matron."

***

Loving Auntie—Don't 'oo love 'oo little baby boy, 'oo little sis pepper, 'ittle bannie-pannies, 'ittle footsie-wootsies, allow kicking—?

Experienced Wife—Just like his pepper.

***

"Superstition seems to be connected in the minds of most people with women, ladders, rabbits' feet, and horseshoes," said the young girl at the piano. "As a matter of fact, however, I know that men are fully as superstitious as the women of my acquaintance, and sometimes more so. One young man of my acquaintance, for instance, who has literary yearnings, and who fondly fancies he could amuse the public with his brilliant stories if he could only get some editor to accept them, spends his summers in the country gathering inspiration, local color, and—four-leaf clovers. When winter comes he returns to his lodgings in Harlem, writes stories by the wholesale, and dispatches with each consignment to the editors a four-leaf clover. Sometimes the articles are accepted and then the writer ascribes his success to the talisman. More often, however, they are returned, with the mascot in a more or less crumpled condition. And he spends what leisure hours he has in trying to figure out why it is those clovers don't work every time. Never for a moment does he ascribe failure to any faults in his manuscripts. Isn't that the limit in the way of superstition?"

***

A young woman living in a suburban village has turned her graceful talent for dancing to account by carrying on the instruction of the young folks in the neighborhood in that art. At the beginning of the term her class was attended by an awkward overgrown girl, who was much in need of such culture. She was the daughter of a local undertaker. After two lessons she discontinued attendance, and one of her acquaintances asked her why she had given up her lessons.

"Well," said she, "Miss Walsh never patronizes my father, and so I won't patronize her school."

***

MRS. BENHAM—Don't you think this new dress of mine is a creation?
BENHAM—Well, there's nothing like it described in the Book of Genesis.

A thousand times they had forbidden little Edith to climb the stepladder in the back yard, and each time she was prompted with all the wiles of Bathsheba who has possessed himself of a four-year-old. At last she yielded and ascended the wabbly steps, meanwhile joyous thrills chased wildly up and down her little spine. When she reached the top rung the ladder began to sway and go threatening to slip, frightening the miscreant so that she began to cry.

A neighbor noticed the embarrassing position of the young woman, and, leaning the fence, promptly helped her to the ground.

Thereupon the tears dried quickly and Miss Edith indignantly cried: "You'll catch it, comin' into our back yard!"

***

Mrs. Smiley—I see that you are very fond of china painting. I presume that in view of your long training you are quite rapid in your work.

Mrs. Wiley—Quite so. Why, I can easily manage to keep three or four pieces ahead of the servants all the time.

***

The dentist took care that he did not open a cavity worth of stock in any chewing gum company.

"The fact is," he said, "I am landing a terrible blow in a vital part of my own business when I say so, but it certainly is a fact that chewing gum is good for the teeth. It may be bad for the general system—I am not competent to pass on that question—but when it comes to cleaning and whitening the teeth it is better than half the dental preparations on the market. I do not mean by that that standard pastes and liquids should be abolished as superfluous aids to beauty and cleanliness, and I hope that all the people who covet nice teeth will not be converted by my remarks into public gum chewers, but it will not hurt anybody to chew gum for half an hour each day in the privacy of one's own room, and the teeth will surely profit by the exercise."

***

A very small boy was watching his mother sew whalebones in her dress.

"What are they, ma?" he asked.

"Bones," she replied.

"Whose?" continued the little fellow.

"Mine," she answered.

He regarded her a minute in amazement and then asked solemnly, "How did you get 'em out?"

***

Queer—When a man laughs at a woman it is because he has a sense of humor, but when a woman laughs at a man it is because she is silly.

***

The jeweler said of course it was not true.

"Nobody but a child would be foolish enough to ask such a question," he said.

The visitor felt uneasy at being thus classed with a ten-year-old.

"But I read it," she argued.

The man looked at her kindly. "You read that a woman took oath in court that she could actually recognize her clock by the tick?" he said, in accusing tones.

The visitor became still more uncomfortable, but she had right and the court reports on her side, and she said: "Yes, I did," quite stoutly.

The jeweler gave way before her righteous claim. "Well, that beats me," he said, "but of course it is not true. There is a difference in the tick of clocks, I admit. Some are loud, some are slow, some are stately and solemn, some are quick and nervous, according to the make. Indeed, clocks that are apparently the exact pattern of each other do not tick alike. You may go into a room where a score of clocks are running, and if you listen closely you will find that no two sound exactly alike. But even so, it is absurd to swear in court or anywhere else that it is possible to recognize a particular clock by the tick."

The woman listened, but she was still unconvinced. "I don't see why it is absurd," she said. "If they tick in different time and tone, why cannot you tell which is which?"

The man turned away in disgust. "What stupidity?" he said.

***

"I look better when I am sick in bed than at any other time," was the startling statement of the woman with sunken eyes. "Consequently, I think I shall make it a point to be laid up about three days in the week. I don't enjoy suffering any more than other people do, but I like to look my best, so I am going to get sick occasionally and thus bring out my fine points.

"I never realized what a wonderful improvement ill-health made in my appearance until Elsie, the colored girl, came to work for us. I was really sick when Elsie came, and she straightway took a wonderful interest in me. Every morning she brushed my hair and mothered me and doctored me and manifested an affectionate regard for me in a dozen different ways.

"'I will be so glad when you are able to dress up and go out,' she said each day, with flattering concern.

"Of course I was pleased by all those attentions. I was ignorant of the source of Elsie's solicitude, but I was anxious to gratify her and as soon as I was able I did dress up and go out. That evening I told her about it.

"'I dressed up this afternoon, Elsie,' I said.

"Elsie rattled the things on the dressing table ostentatiously. 'Yes, ma'am,' she said. 'I saw you.'

"Her tone was expressive of painful reservations. I was anxious to get to the bottom of her disapprobation, and I said 'Well?' inquiringly.

"Elsie fumbled with the combs and brushes uneasily.

"'Well,' she said, 'I was disappointed. I had expected you to be real good looking when you were dressed up, but—I would rather see you in bed.'

"Elsie's opinion was given so very honestly that there was no doubting the strength of her conviction, and since then I have played the invalid as much as possible."

***

A charming young woman has recently been using three-cent stamps on letters sent to her friends. She uses stationery of a delicate heliotrope color ornamented with her monogram in embossed gold. One recipient of several letters had his curiosity piqued, and in a reply he asked the extravagant young woman why she used the three-cent stamps, suggesting that perhaps she had bought a job lot at a bargain price.

"No," she said, in reply, "I have bought no job lot of stamps, and I do not think my letters, or you, of sufficient importance to justify the additional postage. But I would regard a red two-cent stamp on stationery of this color as an artistic horror. Please note how beautifully the three-cent stamp blends with the color of the envelope."

***

Said the sweet young thing—You know I believe I like that combination better when it is broken.

***

The woman who had ripped about two yards of accordion-plaited silk off the bottom of her skirt had collected enough pins to fasten it up. She stuck in the first six pins parallel with the binding, and had commenced to jab in the seventh the same way, when the bright girl stopped her.

"Don't put those pins in that way," she said.

"Why not?" asked the one whose misfortune had strayed.

"Because they will all slip out before you walk a block, if you do," was the reply. "When using pins to keep your clothes together, be wise to stick them in with the head up whenever possible. By so doing you will be able to get home without falling to pieces, but if you stick the pins in lengthwise you will be trailing all over the street again in less than five minutes."

CURRENT CLUB TOPICS

THE most important club event of the week was the annual meeting of the Meadow Brook Club, which took place on Tuesday afternoon at the Waldorf-Astoria. It was more or less a ratification meeting. The ticket had been in the field quite a long time and there was no opposition. Ex-Commodore Edwin D. Morgan was elected President, to succeed Col. William Jay. Ralph Ellis retired as Master of the Hounds, and in his place Foxhall Keene was elected. Mr. Keene is one of the best sportsmen in this country. His record as a huntsman, polo player, and in fact as an adept in every kind of sport, is unsurpassed. He has even become a very distinguished motorist in the last year. Mr. Ellis has been Master of the Hounds for a number of years. He is one of the most popular men in the hunting set. He only retires because of ill-health brought about by many accidents in the field and because he is tired of the position. His ill-health, it is hoped, is only temporary.

***

The Catholic Club has been having some delightful entertainments. On Tuesday the members gave a reception and musicale during the afternoon. On the programme were Master August Bois, violinist; Fräulein Kath Hutting, pianist, and Miss Florence Fagan, reader. On Friday evening, Feb. 6, the Bachelor Circle will give a dance, and in April there will be a large reception in honor of Archbishop Farley.

***

Harry M. Vingut, who is one of the witnesses summoned in the Bucklin case, is quite a well-known clubman. He is unmarried and lives with his brother on Thirty-fourth Street, near Fifth Avenue. He is a member of the Meadow Brook and also of the Racquet Club, in this city, but he has no membership in any of the Fifth Avenue clubs. He was graduated from Harvard in 1891.

***

Archibald Pell, who is another witness, is one of the few young men who have moved in fashionable circles and who belong to no club. At one time Mr. Pell was quite a clubman, and he was then a member of the Calumet. He was very conspicuous there in the nineties, but had one unfortunate experience resulting from an altercation with a fellow-member, which kept him away from the club for a while. On his return he resigned. Another brother, Alexander Mercer Pell, who married Miss Ecclesine, lives in Italy, and is also clubless.

***

Stephen H. P. Pell, however, is one of the members of the Pell family who is a clubman. He belongs to the St. Nicholas and to the Seawanhaka Yacht Club. Stephen Pell married two years ago Miss Sarah Thompson. He and his wife gave a cotillion at the Metropolitan Club Annex last week.

***

The Automobile Club of America has very interesting meetings once a week, at which themes pertaining to automobilism are discussed. Hayden Eames at the last meeting spoke about business motors and the application of the motor power to business wagons and trucks.

***

Algernon—They say Miss Van Ore has a million in her own name.

Sidney—Fudge! That's nothing to her pa value.

***

Reginald Brooks of the Knickerbocker Club is an indefatigable Nimrod. He has just returned from the Far West, where he went in search of big game with more or less success, and is now on his way to Aiken, where he will join the hunting colony there. Mr. Brooks is the son of Mortimer Brooks. He married Miss Langhorne of Virginia, a sister of Mrs. Charles Dana Gibson. He is an expert polo player and a prominent figure in all outdoor sports.

***

J. Montgomery Strong has gradually come into prominence as a social leader and organizer of functions in a very aristocratic set in New York. Mr. Strong is a young bachelor who dances well and has excellent executive powers. He organized last week the corps of ushers who took part in the entertainment for the benefit of the Chatsworth Church at the Waldorf-Astoria. Although it was an evening on which there were several important dances, he managed to secure the services of about a dozen of the most popular dancing men. He is a bachelor, and a member of the New York Yacht Club, the Badminton, and a number of social clubs.

***

A. S. Tute—How's that pretty little Harlem widow you've been raving about lately?

B. Ashful—Oh, she's married.

A. S. Tute—You don't seem to have very good luck in your love affairs, do you, Ashful?

B. Ashful—Oh, I don't know. She married me.

***

They were talking of a Bishop of the Episcopal Church of epicurean tendencies who was invited out to dine very frequently. On such occasions he was of course, asked to say grace. If it were an ordinary repast the Bishop began "Lord, we thank Thee," but if there was turtle soup the invocation commenced "Bountiful Creator."

***

Worthington Whitehouse has come again to the front, after a retirement of some years, as a cotillion leader. Mr. Whitehouse is very dignified in that position and dances with a nonchalance which hardly suggests that he is enjoying it. For the rest, Mr. Whitehouse is more than a cotillion leader. He is an extremely hard-working and successful real estate man. In his hands falls most of the property of his fashionable friends. He is not a member of many clubs. The Knickerbocker and the Racquet about fill the bill for him. He is very methodical in his habits, tall, blond, and somewhat bald, and he has always had a terror of cats. He is unmarried. He was a great favorite with the late Cornelius Vanderbilt, who arranged that the present Cornelius should go abroad with him. He has, with the exception of one year when in mourning for his mother, always led Mrs. Mills's cotillion.

***

"Billy" Harriman, as he is called by his friends, is one of the few unmarried members of his family. He is a banker with quite a genius for making money. In his leisure moments he has been devoted to art, literature, and music. He has an excellent collection of pictures. He has travelled a great deal, and was one of the famous Harriman expedition to Alaska. He has written somewhat for the magazines, but has a lot of valuable material which he has never yet put into print. This past Autumn he was so ill that at one time it was thought that he could not live, but he has sufficiently recovered to be able to go to Palm Beach, where he has been fishing and leading an open-air existence, tempered occasionally with battles at chess, of which game he is very fond. He is one of the very few men who played chess at the different clubs to which he belonged. The Metropolitan was his favorite resort.

***

The National Arts Club has been having a delightful series of Saturday afternoon teas. A number of charming women have poured tea and there has always been something instructive and interesting to see and to hear. Each Saturday there is a musicale, and at these there is an array of solo singers well known in musical circles. The teas will continue until Lent.

***

Self-confidence may be said to have been carried to excess when it causes a man to believe his own lies.

***

Samuel Roosevelt, who is a second cousin of the President, has an exhibition of pictures this Winter at a Fifth Avenue shop. Like all the Roosevelts, he goes in for strenuous work, and the exhibition shows many and varied subjects, and in different lines. Until this year Mr. Roosevelt has modestly remained in the background, but his paintings, quite independent of his illustrious name and ancestry, are attracting general attention. He is a member of the Fencers and other clubs.

***

A FISH DINNER AT THE CLUB.

CHARLEY C. BASS—Yes, Tommy Codleigh was to have dined with us to-day, but they tell me that one of Izz Walton's friends dropped him a line and he has left the bay for good!

The Badminton Club had its silver anniversary on Saturday, the 24th. It was quite a notable function. This club was the first of the Lenten organizations, and it followed immediately upon the fad for roller skating which was so fashionable in the seventies. At the reunion there was a musicale and a dance, and suitable programme souvenirs were given of satin printed on silver. Mrs. Frederic J. de Peyster and other hostesses received. The Badminton Club will continue to have its weekly meetings through Lent.

The gardenia, which has something of the subtle perfume of the jasmine and tuberose and the waxy appearance of the camelia, is the very fashionable flower just now for a boutonniere. Men are wearing boutonnieres again, but only in the evening, at dances, the opera, &c. The gardenia has always been a favorite flower abroad. On a recent opera night, among the men who wore gardenias were Hugo Baring, Robert Goelet, George Gould, Dennis Hare, Count Primoli, Worthington Whitehouse, T. J. Oakley Rhinelander, and Lord Beresford.

Edwin Gould, who is to be elected Vice Commodore of the Atlantic Yacht Club, takes more interest in country clubs of all kinds than those situated in town. In fact, one very rarely sees him at any of the New York clubs, although he belongs to several, including the Union League. And yet in number of clubs of which he is a member there are few men in New York who exceed him. He belongs to twenty-one of them. Frank Gould, his youngest brother, also sticks to the Union League as his most prominent town club. Since his marriage he has changed a great deal in his tastes for outdoor sports and has become more or less nautical. Like his brother, he is a member of the Atlantic Yacht Club. The election and annual meeting will be held on Feb. 9.

***

Robert E. Tod, the Commodore of the Atlantic Yacht Club, is a bachelor. He lives with his brother, also a bachelor, at the New York Yacht Club. All of his club interests are affiliated with yachting. He was Commodore of the Atlantic Yacht Club last year, and this will be his re-election. He has been extremely popular with the members.

***

Softleigh—Your sister says there is something very funny looking about my eye.

Hardman—Possibly she was referring to your face.

***

Sir Bache Cunard made his appearance at the opera on Monday as the guest of Mrs. Gambril. Sir Bache is half American, as everybody knows. He comes over here to settle the famous Cunard-Francklyn case, which has been a cause célèbre for years, and which fifteen years ago created much sensation in the courts and in society. The Knickerbocker and Metropolitan Clubs are Sir Bache Cunard's choice when in New York, which is seldom. He is very fond of the country, and lives for a greater part of the year at Nevil Holt, the Cunard estate. He is most artistic in his tastes, and is accomplished in bookbinding, leather work, and furniture carving. He makes beautiful things in these lines which he delights to present to his friends. He married an American, Miss Maude Burk.

***

Athlete—I don't see how you can call skating a dangerous sport.

Oldlover—Why, I've known many a poor fellow to get married just by teaching a girl to skate.

***

A little party of actors were telling dog stories at the Lambs Club. Nat Goodwin, who had listened to the succession of startling yarns, finally interposed:

"Now, this is a true story which I will back up with affidavits. Duncan Ross, the Scotch athlete, brought to New York with him a few years ago a valuable bull terrier, famous for the blue ribbons he had won in England. Mr. Ross lived across the Harlem River, but his business took him daily to the lower part of New York. Invariably he was accompanied to his office by his bull terrier. As it was known that he always came down town on the elevated road, his friends wondered, knowing the embargo placed upon dogs, how he procured transit for the bull terrier. Their repeated questioning finally persuaded him to reveal the secret, and he invited them all to the office one evening, just as he was starting for home. He took out of his desk a stout piece of wrapping paper, and opening it out flat spread it on the floor. Then he whistled to the dog, and the bull terrier walked to the centre of the paper and curled up in a limp lump. Mr. Ross then produced a piece of stout cord and made a very neat parcel of his pet, and tucked it under his arm.

"'I have carried this parcel up and down town for two years,' he said, 'and no one has had the faintest suspicion of its animated contents. Clive is so well trained that he never makes a sound or moves a muscle. I leave a little opening at one end of the package, so that he has plenty of air.'"

"That reminds me," said De Wolf Hopper. But he looked around upon an empty circle of chairs.

The Gauntlet of Gevarre

Prologue.

I, WHO write these words, am myself a Gevarre. Need I say more?

I am a Gevarre! Others are not Gevarres. Poor wretches! I cannot blame them; yet it is well to remember that they are not Gevarres. They have made their own beds; therefore, let them lie in them. I myself thought of this suggestion concerning their lying in their beds, but the Gevarres ever were clever, and I—well, perhaps I am not the least so of them all.

The Gevarres never were scriveners, but we ever were able to make our mark, and, as this is to be a popular novel, and well advertised—but what have the Gevarres to do with the secrets of trade? It ever was our way to scorn them. We have little to do with the proletaire, we Gevarres.

The records of the Gevarres antedate the time of Charlemagne. When that monarch still was a potent possibility of the future, we were tending our herds of swine in the forests of Lithuania. I do not write it with a blush; we have been courtiers since that time, and our experience with pork has not been without avail. My grandsire was a most puissant Captain under Charles I.; my father was his not unworthy son; as for myself—but this brief record, done into English by the publisher's orders, shall contain the account of those stirring scenes in which no Gevarre could have been an unrecognized factor. And if at times the blood runs cold, and the hair rises in reading, this shall not be my fault; let it be laid at the door of the publisher, where it belongs.

We Gevarres are of French descent, and we still are French. If some representative of the canaille desires an explanation of how it was that the head of a noble French family fought under Charles I., let him have it out with the publisher. The Gevarres have nothing to do with explanations; blood is their specialty. Now to the tale of what I, a Gevarre, have done:

CHAPTER I.

The landlord led me to the foot of the marble stairway, at the same time jovially remarking:

"Thirteen flights up; second door to the left."

"Varlet!" I hissed.

I saw his face turn ashen with terror, but I did not mind it, for I am a Gevarre, and used to such things.

"The elevator is out of order and it will be necessary to walk," he muttered in low, trembling tones.

In a moment my trusty sword, the bright sword of the Gevarres, was in my hand.

"This insult to me, a Gevarre!" I cried. "Draw, villain!"

Before he had time to draw his bill on me his reactions blade had done the work; yet as he fell he cast his fast-dimming eyes toward the parlors, and brokenly murmured:

"Ha! It is—she. I—am—avenged."

CHAPTER II.

"I seen you."

Those eyes now are dim with thirsting years, but never have they seen, and never will they see, a more glorious vision than confronted them when first they rested upon Beatrice, the chambermaid.

Yet, even as I looked, and even while my heart beat tumultuously in my warranted-Gevarre breast, I realized that something must be done or I was undone, that the consequences of my deed must be undone, or I was done. Even in the stress of the only love that I ever have known, this was clear to me.

She stood reclining against the massive carved balustrade. On her face was a Greek look of horror, although the thermometer in the room then indicated 82 degrees above zero, and in her delicate white hand was a carpet-sweeper, which, even in that moment of perturbation, I observed was made in Grand Rapids, Mich. Our glances met, and I knew that I was saved, for in eyes not indignation, but love, that I read in her glorious orbs. Slowly I drew near to her, and she passed in small my sabotage. She was not in a long, long moment. [illegible]

"Come with me!"

"Where?"

"Anywhere! Anywhere! Anywhere! Anywhere!"

"Why?"

"Because I love you!"

"Why?"

"Because I love you!"

"Why?"

"Because I love you

"A KEY TO THE SITUATION."

IT was all Buster's fault. He had no business to be standing in my doorway at 5 o'clock in the afternoon grinning like a Cheshire cat just because I happened to be entertaining the dearest little woman in the world before my studio fire.

Of course, she noticed that I was abstracted, that for the first time since I'd known her I wasn't paying attention to her words. She followed the direction of my gaze and discovered Buster in the doorway. Naturally that spoiled the whole combination, and after a hasty introduction she arose in an embarrassed way, saying that she was sure she could enter her own studio now.

After she had gone Buster gazed at me admiringly and asked me to "tell him about it." He didn't deserve to be told anything after having spoiled my tête-à-tête, but, being Buster, I was lenient and told him how I had found the "Little Lady" sitting disconsolately on the stairs outside her own studio door waiting for the return of the janitor, he being the only one able to recover the key she had let fall down the airshaft.

I had never been introduced to the "Little Lady," and she had never given me more than a polite nod in passing, though I had often tried to start a conversation about the weather. She looked so forlorn sitting on the cold, dusty stairway this afternoon, however, that I took fresh courage and asked if I might be of service.

In a frank, natural sort of way she explained the situation and took me to see the fallen key lying four stories below, with no way of reaching it except through the janitor's apartment. We both agreed that the only thing to be done was to wait for that worthy's return, but I contended that it was absurd to sit in a freezing hallway to wait, when the key to my warm and cosy studio was in my pocket. She laughed brightly, and after a dainty moment of hesitation consented to being enthroned in my big armchair before the open fire, which I had knocked into a cheerful blaze.

She had been chatting easily for some moments about her work, and had admired some of my unfinished specimens that littered the room, when I suddenly noticed that on the third finger of her left hand she wore a plain gold ring. Somehow my heart sank. Was she married, then, this dainty little lady that had the studio directly under my own? My eyes wandered to the neat little black hat that fitted so snugly over the silky blonde hair, to the line of white that outlined her throat, and then to the long black ulster and black-gloved hand that rested on the sturdy arm of my chair. She was in mourning for some one, that was plain. A widow, perhaps? And unconsciously I stared again at the plain gold band. She caught me looking at it, and as she raised her slim, tapering fingers, she was about to say something in regard to it, I felt sure, when Buster appeared and spoiled it all.

And now she had gone, and perhaps I should never again have such an opportunity. My chum suggested that if no other way could be found, perhaps some day I could drop my key and play loneliness and cold.

Buster was absurdly excited the night I sprained my ankle, and as they were carrying me up from the cab he made an infernal racket giving orders, and then I couldn't help groaning when he knocked against my foot. It happened just outside the "Little Lady's" door, which she opened an inch or two to ascertain the cause of the disturbance. When she saw us she opened it wider and inquired with delightful concern if I had met with an accident.

Then of course Buster had to blurt it all out—he seemed to think I was dead or something, and couldn't talk—so I was carried on up to my room, unable to say a word, while he stayed and received the benefit of her sympathy that belonged to me.

But I must say for him that he didn't stay long, not as long as I should have stayed had I been in his place, but came right up and helped the doctor lace me in splints. My foot pained so horribly that I forgot to ask him what she had said until after the doctor had gone; then he said that he could not just remember—the idiot! Had she said she was sorry? Yes, he thought she had said so. Had she offered any assistance? Yes, he thought that was what she had said at first, &c. I saw I could get no satisfaction out of Buster, so I wearily answered his question for the tenth time, "Yes, I am fairly comfortable."

But, bless Buster's heart! I don't know what I should have done without him. He stayed with me that night and promised to look in on me the next day after business, he made arrangements to have my meals brought to my rooms, and bribed the buttons to stay awake to answer my bell.

But for all that I grew awfully lonesome about 4 o'clock, when it became too dark to read, and I could do nothing but stare into the dying fire. I was growing so melancholy that I think had I been a woman I should have indulged in a "good cry."

Then softly, gently, blending with the snap of the fire came a faint knocking. I knew it wasn't Buster, for his knock would have startled me, so I called expectantly "Come."

Gradually the door opened and on the threshold stood the "Little Lady," wrapped in her furs, the snowflakes still clinging to her hair and muff. I must have jumped, for I got a frightful twinge and she hurried across the room and begged me not to move. I think I told her that my foot had been paining me terribly, for I remember she gave a cooing "Oh!" of sympathy. But to my eager question she answered that she wouldn't sit down, that she had only stopped for a moment to inquire how I was, and if there was anything she could do.

She was drawing off her gloves as she spoke, and her muff rested on the table at my side. "Aren't you cold? Why, the fire is almost out! Shan't I fix it?" And with that she was on her knees before the sputtering fire with its reviving light glistening on her furs and dancing about her lithe figure.

Her little head was within easy reach of my hand, and I would have given much to have stroked those few rebellious ringlets, damp from the snow. But I reached for her muff instead and contented myself with stroking that; I think I put it in to my cheek when she wasn't looking.

I watched her deftly light the reading lamp and place it nearer my chair, and softly draw the curtains, then timidly:

"May I shake up your cushions before I go? Oh, indeed, it's no trouble, it's a pleasure," she was saying, as she patted and cleverly arranged my pillows. I leaned back with a sigh of delicious comfort, and she smiled sympathetically. I looked about the room and tried to tell her how quickly she had changed a barren, cheerless room into a glowing, cosy one, and how grateful I was to her, but she only laughed as she picked up her gloves and muff, and, giving one last feminine pat to the lamp shade, turned to go. But before she left I won from her a promise that made me look forward to 4 o'clock during the rest of the days I was stranded upon two chairs.

Buster and I are great chums, you know. We've traveled together ever since our college days, and I'm mighty fond of him. He is an awful kid at times, but then he is only twenty-two, while I am nearly thirty and secretly rather fond of the six grey hairs over my left temple.

Buster was a brick while I was laid up, and we got on famously until—well, you see, Buster is the kind of a person you have to explain things to, you can hardly ever trust him to grasp a situation clearly unaided.

How different it was with the "Little Lady." How quick she was to see a thing. Just as you were floundering about vainly trying to describe something vague, your helpless look was met with a gleam of kindly humor and understanding, and her eyes seemed to say, "I know, I know."

And so, when I was well enough to be about, I used to spend all the time I dared in the "Little Lady's" studio, and more and more often I would meet Buster there, and somehow if we were alone for a short time there occurred an awkward silence between us. It always made me feel like sneering to see Buster sitting beside the "Little Lady," watching her at work on one of her exquisitely beautiful miniatures with a soft kind of expression in his calf-like eyes.

I would always tie a note to the flowers I sent her, but she usually waited till she saw me to acknowledge them, while she and Buster kept up a steady correspondence. They went out very often together, too, for Buster has money and is rather a swell, you know. And so it went on, and try as I might, I could make no headway, and it wasn't until I had finally routed my egotism and fully realized that she preferred Buster's company to mine that I quit making a fool of myself and stayed away.

I was pretty badly cut up at first, and of course I couldn't help showing it a bit, but after a time I got so that I could bow gracefully and unconcernedly when I met them together. Then I set to and worked harder than I had ever done before in my life. So it happened that during the time that the "Little Lady" was giving Buster glimpses of paradise I was turning out some pretty good work.

Once when I met her on the stairs she asked me sweetly why I never came in any more, to which I replied a little stiffly that "If I thought she really wanted to see me, I should be most happy," &c. She laughed a bright, merry little laugh, and in the dear familiar way which I remembered so well she looked up saucily and said, "Silly!"

You cannot imagine the soft, cooing, half-tender way in which she could say that one word. It made me long to—oh, well, when I reached my room and sat down to think it all over for the hundredth time I decided that it was rather heartless of her to play with me so. Was it not enough to have one man's heart and soul absolutely hers, without trying to make believe to me that I had neglected her just to hear me say how much I should always like to be with her?

Occasionally she would give a studio tea, to which I sometimes went, just to see the picture she made in her fluffy grey gowns, with dainty fingers darting here and there among the fragile china.

Her studio was such an artistic, attractive, feminine room, with its dainty desk, its rows of books, deep-cushioned divans, and glowing fires. She always had some roses about, and there was a certain subtle scent of incense in the room, which, years from now were I to smell, would bring back the days when I would have given my right arm to have changed places with Buster.

But then came the day (poor old Buster!) when my chum came to me with such a pitiful, white, drawn look around his mouth and such a blank, hopeless look in his eyes as made my heart bleed for him.

He told me quietly all about it, stuck it out bravely enough until I crossed the room and laid my hand on his shoulder.

"Dear old chum," said I, "what can I say? How shall I—" Then, with a sob, he buried his head in his hands, and we sat in silence until I couldn't stand the injustice of the thing any longer, and I said something about it being heartless and unnecessary.

Instantly he raised his hand and looked me straight in the eye. "Jack," said he, "don't ever let me hear you say that again. You see, she didn't know, she didn't realize that I cared in that way; she was so miserably sorry for the mistake, and begged me to forgive her for seeming to give encouragement. She said she thought it was all so jolly our being such good chums and all that—oh, Jack, what a mess I've made of it! You are the only one who can realize what it means to me! Oh, what a fool, what a blind fool, I've been!"

Buster and I were inseparable after that until the morning he sailed for Paris. You see, I was awfully fond of Buster and was rather angry with the "Little Lady."

I hadn't seen her for quite three weeks, and tried to make myself believe that I didn't want to. How ashamed I was of waking suddenly in the night with that odd fluttering feeling at my heart when

FAITHFUL PONTO PROVES HIMSELF A TRUE SPORT.

Mr. Snookums, after a long, cold wait, gets a nibble, and—

In his excitement jerks the fish off the hook.

Faithful Ponto, rising to the emergency, takes a cold plunge—

and lands the prize!

I remembered that once more I was free to hope.

Buster had been gone nearly three months when, one night as the "Little Lady" and myself were sitting before her fire sipping the black coffee her maid had left us, she began to speak of my chum, very slowly and calmly at first, but suddenly, as if abandoning some studied form of speech, she raised her eyes, in which the tears welled quickly, and asked:

"Are you angry with me still, Mr. Armstrong? Can you ever forgive me for breaking his heart? Indeed, indeed, I didn't know, I didn't mean to! He was always such a good chum, you know, and I never imagined—"

I didn't hear what she was saying. I was looking at her earnest face and eager gestures, and she took my silence for disbelief, or reluctance to forgive. She leaned back among the cushions of her chair with a deep sigh and stared into the ever-changing fire.

We had just come from the opera, and the "Little Lady's" cloak, all filmy and soft, was thrown over the back of her chair. Her small head rested rather wearily against it, and one little cascade of chiffon fell over her creamy shoulder. I was thinking that she was as graceful and as full of curves as a slender trail of smoke, and as I watched the firelight playing upon her face and upon the lines of her languorous figure, I was possessed of a stifling desire to gather her slowly, surely, with inexorable strength to me, to hold her close, close, almost to hurt, to crush that velvety, creamy flesh, so firm and cool.

I drew my chair nearer to hers and took her hand, which she allowed to lie passive in my own. "Dear Little Lady," said I, "forgive you? What am I to judge your motives? It is true, at first I thought it was rather heartless and unfeeling of you, but then, you see, Buster is my only friend, and I didn't really know you then."

She turned to me with such a happy, relieved expression in her eyes. "He said he understood and forgave me before he left, Mr. Armstrong; but I didn't want you to think—I wanted you to know—"

"Are you always going to call me Mr. Armstrong?" said I, ignoring her last remark. "Won't you call me Jack for short?" She smiled playfully and turned again to the fire.

"Then you might accuse me of flirting with you."

She tried to withdraw the little hand I had been stroking, so I quietly possessed myself of the other. I think she rather liked my assurance, for the smile lingered on her face until her gaze reluctantly left the fire and she saw the seriousness in my eyes.

"Dear 'Little Lady,' listen to me. You have my heart to break or make, just as you will. You've had it ever since the first day you came to cheer me up when I was ill. When I realized what a selfish egotist I was, I tried to shut it all out, all the love I had been trying to give you for so long. Yes, you must let me tell you now. Sweetheart, don't you know that my heart almost broke for joy when I suddenly realized that I was free to try to win you? Don't you think, dear, you could care for me ever so little? Give me the right to make you love me."

Her head was turned from me, and she was silent so long, that gradually a cold, numbing fear began to grip my heart; but I swallowed hard and managed to say: "Of course, I know you don't care now; but some day, perhaps?"

Still she was silent, and I dropped her hands and buried my head deep in my own. Oh, Buster, I thought, I know now what you must have suffered!

The "Little Lady" had risen. I heard her moving about the room. She came and stood before the fire. "Jack!" she said, in a voice that shook and vibrated and that made me bound. "Do you remember this?" It was a withered rose, and the first note I had ever written her, thanking her for coming to me that first day I was ill.

I held her close and kissed her lips again and again. "And you really cared for me, dear little one?" said I.

"I've loved you, Jack," said she, "ever since that night," and she hid her bright blushes on my shoulder.

You see, I have been reading this story aloud to my wife, and when I finished she looked up from the miniature of my august self on which she is at work, and smiled.

"Wearing my mother's wedding ring and being in mourning was rather misleading, Jack, but the very idea of your thinking that I was a widow!"

ANNIE LATHEM.

The Evolution of a Barrel

AND there it stood beside his glowing hearth, a big awkward cretonne draped monstrosity, bordered grotesquely with a double row of brass nail heads, a hideous blot among the beautiful equipments of his studio. A letter, addressed in his sister's careful hand, was pinned on the top of the singular object.

"Dear Maxwell," it ran, "we all hope that you may spend a very happy birthday. It was a disappointment to us all not to have you with us, but of course you know best. I send with this a little gift which I made myself, an armchair for your study, and I hope you will find it a nice, easy rest after your day's work. It is as much like mother's old chair that you used to like as I could make it. I wrote to your caretaker asking him to have it unpacked and put in your study so as to be all ready for you when you come home to-night.

"With many good wishes, as ever,

"Your loving sister, Alma."

"P. S.—I am coming down next week for a few days. Will try to make it Tuesday. I wanted to be there for your birthday, but as you wrote that you would be very busy thought it might not be convenient to have me there."

"So it's a chair!" Maxwell exclaimed in comical dismay, looking over at the corpulent arrangement. "Could I ever have liked a thing like that? It seems incredible, yet there's a dim recollection of something on that order in the old home. It couldn't have been quite as ugly as that! What on earth shall I do with it? Alma is so sensitive she'd never forgive me if I should banish it from sight while she's here! I'll have to make the best of it."

Alma arrived in due time on Tuesday morning, the day of his "studio afternoon," upon which he had built such great hopes concerning a certain girl who filled all his waking thoughts.

"I'm expecting some callers to-day," he told Alma, cheerfully, "and I want things to look just right, for most of the folks who come here are artists. Look your best, Alma, won't you?"

Alma went into a flutter of girlish delight at the prospect of meeting Maxwell's artist friends. She puttered and dusted about the studio all that morning, and finally placed her cretonne chair in aggressive prominence before the burnished hearth, to Maxwell's great discomfiture. At the last moment, when he either had retired to freshen his toilet, he swept one of the Turkish portieres from its place and hurriedly draped it over the glaring monstrosity, but when Alma looked in a few moments later to see that nothing had been forgotten she gently removed the drapery and slipped it under the seat of the chair.

"Maxwell is such a thoughtful fellow," she mused, well pleased with his care of her gift. "He is afraid of soiling the delicate colors, of course, but I guess it won't hurt it to have his friends see it. It makes such a bright spot among all these dull colors. Maxwell has such queer taste. He needs a woman to think up things for him."

Maxwell had met his guests in the hall, where they lingered to talk over a recently finished watercolor which he had hung under the skylight for better effect. When he reappeared in the studio he was accompanied by a girl and a man—a girl who reminded Alma of a picture on a magazine cover, so fair of face and graceful, gowned in trailing sombreness, with a great bunch of crisp violets at her breast and on her muff. Miss Chetwyn, Maxwell called her, and something in his eyes when he spoke her name betrayed his secret to Alma. The young man introduced himself to Alma as "Max's pal and deadliest rival, Billy Lawrence."

"And this is your first visit here?" he asked, heartily. "You must let me take you about when Max is busy. I know a few things about the town that would interest you. Been all your brother's pictures, I suppose. Great, aren't they? Oh, he's a lucky chap, I tell you!"

Instantly Billy's eyes focused upon the blue and yellow bonnet before the fire.

"What in thunder do you call that, and where did it come from?" he cried, prodding the chair with his cane, and lifting the cretonne ruffle, displaying a circle of unpainted staves. "Looks like a barrel," he went on, examining it still further. "What is it anyhow? Some trumpery for a picture?"

Maxwell opened his lips to reply, when Billy interrupted his explanation with roars of laughter. "I know," he exclaimed; "it's a barrel armchair, like something I once saw way off in a backwoods farmhouse. Fat old lady used to sit in it for hours knitting before the fire. Good idea, by Jove! One so seldom sees that sort of thing nowadays. Who's to be your model?"

"No one," Maxwell began in a curiously cold voice, and again Billy interrupted with a derisive laugh.

"Oh! Now I see! Some country flame sent it to you for your birthday. Your sister let the cat out of the bag partly by referring to your birthday. Pretty good! What do you say to that, Miss Chetwyn?"

Maxwell looked at Alma, whose face turned from red to white and back in wavelike succession. To explain matters would merely embarrass his sister and mortify Billy, whose good-natured raillery was not always understood or appreciated by strangers, so he concluded to say nothing. But Billy was insistently bent upon tormenting his host.

"I can see, as it were, the whole process of evolution from a barrel filled with farm produce to an armchair; with a rosy, buxom country girl sewing and mending (and sewing in great delight in some farm kitchen with their shining tins and kettles. What is her name, Maxwell, and when shall we meet her?"

The girl listened with a queer little smile that was not all amusement. Finally Billy's imagination was checked by the arrival of other guests, and when the three turned to greet the newcomers Alma quickly withdrew the portière from the barrel seat and covered the object of Billy's derision. The day was spoiled to her, for, being a girl of few resources, she could not throw off the cloud that dampened her spirits. Perhaps Billy guessed that something had gone wrong, for he took particular pains to entertain and amuse her thereafter. He explained all about the pictures, which had seemed rather dull to Alma, who knew nothing whatever of art, or indeed anything outside of her country housekeeping and little domestic accomplishments unknown to city girls.

"I'm glad you told me all this," she said timidly, when they had reached the end of the row of pictures. "I know so little about art except what Maxwell has told me, and he has been away so much, you know. This is my first visit to the city since he set up for himself."

"You may be very proud of Maxwell," Billy told her warmly. "He's making a fine name for himself, and he stands way ahead of some fellows who started ten years before him. I think heaps of him—he's a jolly good fellow all around."

"I thought at first that he seemed a little troubled," Alma ventured, inquiringly, "and laid it to his business. I'm glad it's not that."

"I think it's the girl. He has told you about her, of course?"

"You mean he is in love?" Alma asked apologetically.

"Why, yes. It's an open secret with me. I thought you knew. Perhaps I'd better not say anything more. I'm sorry I mentioned the matter."

"Tell me just this—is it Miss Chetwyn?"

Billy nodded. "Beautiful, isn't she? She's way up socially, too, but Max is worth more than money and position, and if she's the sort of a girl I think she'll overlook a few inequalities."

Alma watched the tall, beautiful girl with the violets all the afternoon with strange but timid fascination. At last she found the longed-for opportunity to speak to her while her brother turned aside to explain a point of argument to some late comer.

"I want to explain about the chair," she began nervously, but with an expression that robbed the situation of absurdity. "I made it for Maxwell's birthday present, not knowing how inappropriate it would be here. We are very different from Max, you know, just ordinary dull country people, used to homely things. I have never been down here before, and I didn't know what his place was like. That is all I have to tell you. I knew Max wouldn't explain for fear of hurting my feelings. He is such a kind-hearted fellow, you know."

The girl with the violets blushed deeply and put one little white-gloved hand on Alma's brown wrist. "It was very sweet of you to take so much trouble for Max," she said, with a smile that cheered the listener wonderfully. "I am sure he appreciated the motive just as I appreciate your confidence in me."

"I shall know better after this," said Alma, timidly. "I wanted you to know—to be sure that there isn't any other girl, you know."

Maxwell's arrival prevented the answer that rushed to the girl's lips. She closed her hand over Alma's with friendly pressure as she bade her adieu, then, turning to Maxwell, who watched her hungrily, said as an afterthought: "We start for California the day after to-morrow. If you have time to call in the meanwhile I shall be very glad to see you."

Billy Lawrence, who had overheard Alma's explanation, went over to her with outstretched hand. "I humbly beg your pardon for my miserable blunder," he said. Then, before she had time to answer, added: "You put in a winning stroke for Maxwell that time, little girl. Oh, it will be 'yes' sure as fate. Lucky chap!"

HELEN F. HUNTINGTON.

His Ruling Passion.

"PROFANITY," said a Chicago clergyman, "becomes such a habit that some men use profane language in absolute ignorance of the fact that they are doing so. I have known several men of this kind, and their virtues were such that I could not honestly blame them as I should when they were guilty. The habit I condemned, and did what I could to correct it, but the sinning itself seemed to be so much a part of them that I treated it with a leniency which I knew was not right, and yet I could not wholly condemn them for it.

"I remember particularly the case of old Ben Stiles. Ben had been a sailor for many years, and when I first knew him he was the most profane man I had ever heard talk. In every other respect he was one of the finest characters I ever knew in his walk of life. He lived near me, and frequently did odd jobs about the parsonage. In this way I came to know him quite well, and in the course of two or three years I had almost broken him of his profanity. But not entirely, and whenever he was deeply moved he was sure to swear in one way or another.

"At first Ben would not come to church, but by and by he was present every Sunday, and when we had a great revival, on one occasion he confessed his sins and asked the prayers of the church. He only needed the revival influence to come out squarely on the right side. We were all profoundly relieved when he arose in the meeting and asked for our prayers. I took him by the hand and told him he must pray himself, while we were praying for him.

"We knelt together, and for some time Ben could not speak. Finally he found utterance, and I am sure I shall never forget that prayer, and I know that the tears of the Recording Angel blotted out the one word in it that should not have been there, yet was no sign that he was not truly repentant.

"'O Lord,' he prayed, 'help me, a poor sinner. I'm sorry, O Lord, for the sins I have committed, and help me to be better, if I don't do d—d bad. Amen.'

"It was unlike any other prayer I had ever heard, but it was from the heart, and Ben never knew that he had used the wrong word. He died a Christian, ten years after his conversion, and after that he unmoralized with I never heard him swear again."

Those Suburban Girls.

THE Suburban Girl lives in the most attractive suburb of the big city.

We have four trains a day and a trolley. If we start early enough we may arrive in town in time for the second act at the theatre, and we generally run down in January and July for bargains. Otherwise we are entirely independent.

We have established a public library without any help from "Handy Andy," and we have a hospital and a Home for Aged Women. We don't need a home for men, because the men all go to the city as soon as they become of age and get homes of their own. Now, with all these attractions what more could any well-regulated suburb desire?

We have a number of clubs—women's clubs, of course. There is the Whist Club, which meets every Monday morning for the express purpose of playing that intellectual game and nothing else—they chose Monday to show that they kept at least one maid of all work or patronized the laundry exclusively; the Pedro Club, which meets Tuesday evenings and includes the husbands and something good to eat; the Shakespeare Club, which solemnly reads "Hudson's Shakespeare"—with notes—and includes several members who have seen Mr. Mansfield in "Julius Caesar" and Mr. Sothern in "Hamlet," and lastly and beetly, we have a club for the study of Aesthetic Culture and Hindu Philosophy. Last year we had just a plain "Study Club," and read papers on the Philippines and the Boers, and they were such bores that this year we reorganized altogether and took up aesthetic culture and Hindu philosophy.

As a suburb we have always had a leaning toward aesthetic culture. I think there is hardly an album to be found among us. We each have a Barye lion in the library and "angels' heads" in the music room. One of the girls has a Christy calendar, and another Gibson's "Social Ladder," which we find a great help in seeking the heights. Ever since the Pan-American show we have been staining things green & la Reid, and changing our nice stuffed easy chairs for mission furniture. Then we had a Principal in our high school for years who said "idea" and "pepper," and "incumber," and to cap the climax the "Sage of Rhycroft" came to the suburb to lecture. Although he afterward found fault with the hotel where he was stopping and wished he had stopped at another where the dining room was not so crowded—I believe there were three people at his table, but sometimes three is a crowd—still we did not mind that. We shouldn't like to stop long at our hotels ourselves.

We girls of course admired his long raven locks, and agreed that the love story of Elizabeth Barrett and Robert Browning gained new sweetness and pathos from the telling of Eva Elbertus. He left us each a sample copy of The Philistine, and enough we were all subscribers to Roby's Magazine, we were almost tempted to change. However, when we put it to a vote we found that the gambling instinct was strong within us, for each one had answered the "prize puzzle contest" in the last issue, and expected in the course of a month or two to find her name among the winners, so we were obliged to give up the idea of a change.

At first we thought we might do a little missionary work in aesthetic culture, and we accepted the offer of the parlor in the engine house of No. 1 Steamer and Hose Company as a place of meeting. The parlor was a big barn room, with a shuffleboard on one side, a buffet on the other, and a big divan heaped high with cushions, which smelt of smoke. There were big cushions and little cushions, hard cushions and soft cushions, all evidently the handiwork of the fair admirers of the fire laddies.

The first day we took up a collection, and bought a big rug in shades of soft old blue for the middle of the floor. Our love evidently met with approval, and the suggestion was accepted, although not as we had expected, for at the next meeting we were startled to find a big rug of brilliant yellow and magenta stretched in front of the divan. We rolled it up firmly nevertheless and we did not despair. The next week we brought a bit of blue silk and a vase of the Winged Victory to adorn the plain wooden mantel. When the next meeting day came Victory had vanished; a yellow bow looped up the blue silk; a white marble clock stood in the centre, flanked on either side by the trumpets of the shield, filled with paper roses.

We inquired of the janitor for "Victory."

"Why, ma'am," he said, "we don't know how it happened, but the critter's head was broke off some way, and although the boys was awful sorry, we couldn't find it nowhere, and I put the rest of it in the closet." The President rescued poor Victory, and now we meet at each other's homes.

The Suburban Girl herself suggested the Hindu philosophy part of our club, and it took like the measles—regular epidemic. When I was at school in Boston I belonged to a club for the study of the "New Thought." The members were almost all literary folks, and we used to entertain all sorts of celebrities. One evening we entertained the "Swami Sarpdananda," who was visiting the city. Oh! he was a swell Hindu. In his long red gown and his yellow turban he was a picture. We girls just stood around and worshipped. He had such dark, soulful eyes, you know, and the only barbaric thing about him was a big white cotton handkerchief, with a checkerboard border, which we spied peeping from his breast pocket. This handkerchief quite startled me for a moment, and I almost lost the thread of the conversation, which, as I recollect it, was something about the difference between the climate of India and that of Boston—the dear Swami thought Boston too cold. Just fancy!

The Swami was a vegetarian, you know. If he had eaten meat he might have eaten a transmigrated "auntie-sister," so we had a vegetarian dinner—"oats, peas, beans, and barley grows"—and afterward the Swami and the Countess Westmeister, Rabbi Fleischer, and Ralph Waldo Trine gave us little talks on new thoughts and vegetables.

When I suggested "Hindu Philosophy" one of the girls said she had always thought that the Hindus were rather queer and impossible, and she quoted a little verse:

"The poor, benighted Hindu,
For clothes, he makes his skin do."

But I showed her the Swami's photograph and she changed her mind instantly.

Voltaire says that "without philosophy we should be little above the lower animals."

Of course he didn't mean exactly the philosophy of the Hindu—as we are studying it—but the quotation is very applicable, for it is mental, moral, and spiritual betterment that is the Hindu philosopher's aim.

I think the first thing we should learn from the philosophy is repose. In this hurry-burry, modern world there is very little of it, and the American women especially need it—repose and concentration of mind. We are working for both in our club. How sadly we stand in need of both one has only to visit the club to be assured.

Of course we have dear little year-books illumined in scarlet and gold, with an appropriate quotation for each meeting (half some member has culled from the "thousand quotations book."

The day the club met at the villa I gathered together all the Indian relics I could find—not tomahawks, you know, but real dear Indian things, and the girls loaned me all their cushions, so that with my own I managed to make the mission throne very comfortable. I have an old silver Russian lamp that came from some Oriental place, and, filled with burning incense, it added just the needed atmosphere to the affair.

The President wore a charming red gown, and I had a huge bronze jar of yellow chrysanthemums placed near her chair. We have a cunning little red book of parliamentary rules, and the dearest little gavel. The President never can remember that it is a gavel. She always calls it the little knocker thing. I remember the day she first presided she said: "Oh, I want to thank you for making me President, but I don't know a thing about it, only I know that first I must knock with this little knocker thing, and tell you to come to order, but what shall I do next? Is it the seconds or the minutes that have to be read?"

The girls will persist in bringing their fancy work to the meetings, which is contrary to all our efforts at repose and concentration. I think it is horrid to have some one drop her scissors, or dive under a table for a lost spool or count stitches in a sweater, right in the middle of the liveliest and most aesthetic thoughts that some of us have spent days evolving with the help of all the encyclopaedias in the library.

We had several visitors from a neighboring club the day they met at the villa, and toward the close of the session I asked one of the visitors how many members their club had.

"Three," she answered, "and we generally commence with a quiz."

I thought perhaps that might be a delicate hint, so I made a little gesture to the President, who promptly knocked down the last speaker with the 'ittle knocker thing,' and we adjourned to the dining room. THE SUBURBAN GIRL.

The Ideal and the Real Thing

"I USED to have the reputation of saying the right thing at the right time," said the tall girl, "but that reputation is now denied me by people who know what happened that day I entertained my friend, Miss Powers of Montana.

"I became very chummy with Miss Powers the Summer I lived in Helena. She was a charming girl. She had the highest ideals of any girl I ever knew. Her notions were particularly high in regard to men. I used to feel quite ashamed of my own debased views when talking to Miss Powers on the subject of men. I was not half as hard to suit as she was. Of course there were some kinds of men that I liked better than other kinds, but if it came to a pinch and I got real lonesome in the Montana gynocracy, which I had unfortunately struck, I could cast my prejudices to the winds and put up with most any old thing, just as it was a man.

"Miss Powers could not do that. She had to have her ideal. In my most exalted moods I really could not blame her for being true to him, for he certainly would have been awfully nice if she could ever have found him. He was tall and dark, and forceful and splendid; he had a romantic name, and he brushed his teeth with pink paste four times a day, and always went about with the scent of apple blossoms clinging to him. Personally, I could have dispensed with the pink paste and the apple blossoms if he had been a composite of all the other virtues, but Miss Powers could not surrender even these attributes.

"'He must be just like that,' she said, 'or I shall never marry.'

"Miss Powers did not marry while I was in Montana. She did not marry after I came back East so long as she continued to write to me. There came a time, however, when Miss Powers and I ceased to correspond, not because of any misunderstanding or unfriendliness, but simply through negligence both on her part and mine.

"There was a period of three years during which I did not hear from Miss Powers. In the beginning of January, however, she remembered our old friendship and wrote me again. She had been visiting her relatives in Hartford. On her way back West she intended to stop in New York for a few hours and would like to see me if I found it convenient. Upon receipt of that letter all my old affection for Miss Powers flowered anew, and I wrote a very cordial letter in reply, inviting her to dine with me, to lunch with me, or do anything else her limited time would allow.

"Miss Powers came to see me, but she did not come alone. She brought a man with her. She introduced the man as Mr. Botts. Mr. Botts looked like a late arrival from rural Sweden, and judging by the way Miss Powers set him aside in one corner of the room and excluded him from the conversation I thought that he really was a raw recruit to American enterprises and that he could understand but little English. Still, I couldn't make out what Miss Powers was doing with him. At last I concluded that he must be some farmhand whom she had advised to go West under her wing and tempt fortune on a Montana ranch. By and by I asked her about him point blank. I nodded toward him in a friendly, encouraging way as I said it, and smiled sweetly.

"'Are you going to take him with you to give him a start?' I asked.

"Miss Powers got as red and as awkward as Mr. Botts himself.

"'Well, rather,' she said. 'Where would you expect him to go? He is my husband.'

"I couldn't help it to save my life—I fairly shrieked:

"'Your husband?' I said, and then, not content with having broken all the rules of good breeding once, I broke them a second time. 'That man your husband?' I said again.

"'My husband, of course,' said Miss Powers. 'What did you think he was? Why shouldn't he be my husband?'

"I looked at Mr. Botts and I thought that a most superfluous question. Miss Powers evidently understood me. She stiffened ominously.

"'I don't see why you should seem so surprised,' she said. 'I wrote you I was married.'

"'Oh, no, you didn't,' said I. 'It must have slipped your mind.'

"When I think over the painful scene now I am sorry for Mr. Botts. He must have felt awfully uncomfortable while we were talking about him that way, for he really could speak English and he understood every word we said.

"Miss Powers—I cannot bring myself to call her Mrs. Botts—did not stay with me long. I did not ask her to stay. Excessive agitation over the transmutation of Miss Powers's ideal had betrayed me into an ineptitude whereby I had ruined my reputation as a felicitous speechmaker, and I was glad to see her go."

TALLER STILL.

Little May—My big sister has a lover six feet tall.

Little Gwen—She's not'in'. Mine has lovers twelve feet.

FROM accounts that have reached this city the book written by George Ade for "Peggy from Paris" contains many lines that are said to be funny. Here are some specimens culled by one who was present on the night the piece was produced in Chicago. To understand some of the allusions it must be remembered that the plot of the piece concerns the adventures of a father who leaves his home in an Indiana village to meet his daughter in Chicago. She is a famous prima donna, just returned from six years' study in Paris. Later the actions shift to the Auditorium Hotel and the stage of the Paragon Theatre. The father invades the theatre, and remarks to the manager:

"My daughter is a music teacher."

The manager replies: "Well, we've got no use for music around here. This is a comic opera."

An operatic aspirant remarks: "A great many people think I have a voice."

"What do the neighbors think?" inquires the manager.

"They say I ought to go abroad to study."

"Well, you certainly ought to go somewhere."

"I'm from Muncie," announces one of the visitors on the stage.

"Oh, where the magazines come from."

***

The lyrics in "Peggy from Paris" cover as broad a range of subjects as is usual in this sort of production. Lotie, the village soprano, sings one about "Hifalutin' Music," which goes like this:

Lullabies are out of date
Since I went to the music school.
Ballads I can't tolerate
Since I went to the music school.
The only songs that will do for me
Are the kind that hit the topmost G.
They're pitched in the operatic key.
Pay attention to my method; it's quite the thing.
O'er the little quarter notes I gracefully swing.
For my voice is highly rated
(I've had it cultivated.)
This is the kind that I love to sing.
Oh, for the time when I'm on the stage,
And press and public both unite in saying
that I am the rage.
Hasten the day when I have my fling.
For I will show them all that I can sing.

The joys of the "Regular Limited Train" are thus sounded:

It's been my dream of joy supreme
To ride in plush and velvet splendor—
Parlor car for a swell tail-ender
On the regular limited train.
Electric bell right under your nose.
A porter to come and brush your clothes
An upper berth for a night's repose.
On the regular limited train.

Biff! Bang! A mile a minute!
No other method of travel is in it;
I want to go shooting and scooting and
spooting
Ain't on the beautiful rog-u-lar
Limity—limity—limity,
Regular limited train.

I must confess, when I undress
I do assume a strange position.
Upper berth's a tough proposition
On the regular limited train.
Next morn get down the best that you can,
But when you crawl from your divan
Your foot comes down on a traveling man,
On the regular limited train.

Of course there is a song especially intended to appeal to the college spirit, of which these are the words:

There are no days like the good old days
When we were college alums.
The mem'ry of the fun and frays
To us forever comes.
We met in the best of comradeship,
And life was a song and jest;
With shining yell ever on the lip
For those days were the best.
REFRAIN.
Rare old, fair old, college days,
The days that were best of all,
With football hats and a solemn stare
And a brand-new pell each Fall
Never to wed till the sown was red,
Or while wed a cub to hear
We've forgotten the lasts
Of the misty pasts
But we refer to the college days;
We're true to the college days.

In quite another vein is the lyric which describes "The Girl Who Comes in From the West."

Like a breath from the flower-strewn prairie,
Like a breeze from the woodland far,
With a smile that is modestly merry,
And a wink like the twink of a star.
She comes to the great wicked city,
And she timidly watches the show,
Of whing and zining
And social outshining.
She longs to get into the "go."
The girl who comes in from the West.
She's not just the same as the rest;
She's never jinksal,
Frightly and cynical.
That's why I like her the best.
Her manner is somewhat demure,
And yet she knows how to allure.
I don't mind confessing
That she sets me guessing.
The girl who comes in from the West.

***

David Belasco and Oscar Hammerstein were standing in front of the Belasco Theatre the other night, and the sage of the Victoria was discoursing, as is often his wont, about many things in general and one or two things in particular. Up and down Broadway and into Forty-second Street surged the crowds on pleasure bent, the stream dividing itself into eddying currents flowing into "The Eternal City" and that flowery kingdom where "The Darling of the Gods" has taken up her earthly habitation.

"It's a sad thing to see," said Hammerstein, "to see the vulgar display of wealth in this great city. At the opera, in the theatre, on the streets—it is present everywhere." He paused reflectively and lighted a cigar.

"Why, Oscar," remarked Mr. Belasco, "what do you know about the vulgar display of wealth. You ought to live up where I do. Then you would have a right to talk."

"Indeed. And what particular example of it could you point out?"

"Why," continued Mr. Belasco, "a neighbor of mine had two tons of hard coal delivered the other morning, and he allowed it to remain on the sidewalk for two whole days."

And Oscar returned to the Victoria to muse in silence upon the evil of these latter days.

***

It remained for a bright girl to discover a point in "The Sultan of Sulu" which had been overlooked, and now that it has been mentioned, it seems surprising that nobody thought of it before. It was after the matinée yesterday, when Manager Burnham, standing in the lobby, was approached by this fair young miss with a smile on her lips and a twinkle in her eye.

"That comedian Moulan is mighty good," she said, "but you just tell him for me that Martini cocktails don't have cherries in them."

Of course Mr. Burnham rushed back to break the awful tidings to the comedian. And a half hour later he paid for a couple of cherries in a nearby "fruit store."

***

The Balcony Club, an organization of theatregoers, has selected Julia Marlowe's production of "The Cavalier" at the Criterion Theatre for their next party on Friday evening, Feb. 6, following a dinner at the Vendome, when Paul Kester, who dramatized Miss Marlowe's play, will be the guest of the evening. It is a unique club. Its prospectus says it is a woman's club run by men; "A number of high-minded though quiet souls who realize the necessity and pleasure of contributing systematically to the enjoyment of that member of the household whom many clubs largely ignore."

The object of the Balcony Club is to take an elevated view of the drama; the height of the elevation depends on the price of the seats. The Entertainment Committee takes the votes of members on the selection of a play several weeks in advance. The membership list is interesting. Opposite each name is told "What the man does." A doctor, for instance, "repairs damaged people"; another member "Strains Coffee"; Mr. L. Bridgman of Brooklyn, "Implores the Arctic." An orchid "Loves you in the eye." One "Counsels the Corporation." Some of the other occupations are "Builds Bridges," "Insures People," "Sells Oil," "Makes Books," "Spares the Rod," "Works in a Store," "Sells Flour," "Unmoos Teachers," "The best he can," "Various Things," "Travels," and "Sells wagons and pins."

***

This is a pitiful little tale of a dog as related by a vaudevillian last week:

"There was once a man who owned a dog. The dog got lost. The man put an 'ad.' in a paper. How foolish. The dogs don't read the papers. But one morning just after he got out of bed the man was looking out of the window, and he saw the dog running down the street. Now, a dog when he runs usually pants. But this dog didn't pant. The man couldn't run without pants. So he couldn't go out and catch his dog."

***

Richard Golden says that while he was playing an engagement in Denver recently he was approached by a young man who in hollow tones declared he had heard that to see him (the actor) was good for almost any form of ailment.

"You might help me," the young man declared with labored breathing; "anyway, I'd like to enjoy myself once more before I die. I have consumption, you know. Could you let me have a pass?"

A look of sympathy came over the actor's face as he drew out a card and scribbled on it, "Pass one. Richard Golden."

The man took the card, looked at it, coughed more distressedly than before, and asked: "Couldn't you make it two? I would like to take a friend."

"Has your friend consumption, too?" inquired the actor solicitously.

"N—no—not yet," faltered the man.

"I'm afraid I can't accommodate your friend then," and a smile broke over the actor's face. "You see, I never give passes except to people with the consumption."

***

Here are a few lines culled from the "Wizard of Oz" that seem to tickle the risibilities of most of the auditors at the New Majestic:

Dorothy brings the scarecrow to life, and the only thing he lacks is an outfit of brains. She persuades him to go with her to the Wizard of Oz.

Dorothy—Are you a brave man?

Scarecrow—The only thing I'm afraid of is a cigarette smoker or a lighted match. If ever I came in contact with one of them, peace to my ashes.

Dorothy—Suppose we're arrested for vagrancy?

Scarecrow—Well, I could give straw bail.

On their pilgrimage to the Wizard they encounter the tin woodman, a knight in armor who has become rusty and cannot move. The scarecrow proceeds to oil his joints.

Scarecrow (lubricating the tin woodman)—Some of these tough joints ought to be pulled.

Pastoria, the ex-King of Oz (recently a motorman in Kansas), makes violent love to Trixy, who has been a waitress in a Kansas restaurant. He remarks to her:

"We were blown out of Kansas on the same cyclone. I was struck by you at our first meeting."

Trixy—Are you going to provide for me?

Pastoria—The most you can expect from a motorman is "a little more room up front, please."

***

Maude Lillian Berri, the prima donna of the "Sultan of Sulu," has a new dream described by one enthusiastic admirer as a "dream of equatorial symbolism and tropical luxury." The dress ought to speak for itself. This is as nearly a description of it as is possible to one who does not pose as a specialist in the bewildering line of women's fashions.

The gown is of lilac green and cream satin—that's what one woman in the orchestra chair said it was—and it is made distinctive by an array of peacocks' life size or larger, outlined with black chenille. One of the birds occupies a position on the front of the gown, winding half way round the close fitting sheath skirt. Another peacock flaunts itself on a parasol carried by the actress. The bottom of the dress is made of English bobbinette. It is accordion pleated and has a very full flounce, the edge being finished with triple ruching. The whole dress is made over Nile green louisine. Hanging from the front of the waist is a cluster of long black chenille strands held in place by a bunch of straw flowers, which also appear at the elbows. These hold in place the peacock's tails, which form the drapery.

Whew!

***

A member of Charles Hawtrey's company is the reputed author of this story, which relates to an incident that occurred during the run of "The Second Mrs. Tanqueray" at George Alexander's Theatre, London. Mr. Alexander played the part of Aubrey Tanqueray, and it is stated Mrs. Campbell frequently stood in the wings during the scenes and made fun of him. Finally he sent her the following note:

"Mr. George Alexander presents his compliments to Mrs. Patrick Campbell, and requests that she refrain in the future from standing in the wings and laughing at him during his scenes."

In a very few moments a return message was presented to Mr. Alexander in his dressing-room, which read as follows:

"Mrs. Patrick Campbell presents her compliments to Mr. George Alexander, and begs to state that she does not stand in the wings and laugh at him during his scenes—she waits until she returns home."

***

On one occasion in Boston William T. Hodge was calling upon some friends, and, after much urging, he gave a private performance of a "fit-throwing" specialty which he used in "Sky Farm" with considerable success. He shortly afterward gave up such gymnastics, but his record found him out. Last week he received the following from a Chicago woman known for her novel entertainments:

"You will pardon me for taking the liberty of addressing you, without the formality of an introduction, but a friend of mine residing in Boston has written to me about you, and says you once entertained her in a unique way by having a fit—a reproduction of a bit of stage acting you once did so successfully. Now, what I want to say is this: I am going to entertain a few friends at a 5 o'clock tea during the holidays, and I would like to ask you if you would be willing to be one of my guests and amuse my friends with one of your fits? I hope you will not think I am presuming in asking this of you. I would be perfectly willing to pay you for your time and trouble."

The lady also offered to send a carriage for Mr. Hodge. But the comedian replied that after a careful inventory he had discovered that he was all out of his good fits.

***

Here is a story about O. P. Huntley, who made a hit in "Kitty Grey," and George Ade. During Ade's recent visit to London he went to see "Three Little Maidens," and was enjoying a hearty laugh over Huntley when an usher told him that the comedian was anxious to know if he would not visit him in his dressing room. Wondering a little, the American writer went "behind" and met Huntley, who greeted him warmly. In the course of the talk he said:

"I've been rather wanting to meet you, Mr. Ade, because a book of yours led in a way to my marriage. Miss Eva Kelly, who is one of your countrywomen, consented to be my wife a while ago. We were both in 'Kitty Grey,' and while the company was waiting at rehearsals she used to read your 'Fables in Slang' to me, and it was largely through her being so that I became well acquainted with her."

Enter at this moment a diminutive page bearing a paragon, and the remainder of the story may be left to the imagination.

ADOLPH KLAUBER.

MR. MORENSTOUT'S ICE-CREEPERS

MR. MORENSTOUT suddenly added a vicious kick at the hat of the lady walking in front of him, which fortunately fell short by about three feet; gyrated wildly for a second or two, an expression of abject terror smuthering his usual placid smile, and sat down on the slippery sidewalk with an undignified haste which broke one tooth short off and seemed to put all the rest out of business.

"This's the fifth time in a block and a half," groaned Mr. Morenstout, glaring malignantly at his feet. "Thunderin' slippery this evening."

Slowly, with infinite care, Mr. Morenstout gathered up his hat and umbrella and struggled to his feet, panting heavily.

"Gosh!" he ejaculated, when at last he had straightened himself up, grabbing a lamppost just in time to prevent a repetition of the catastrophe. "I wish I was a little tendril of an ivy and had nothing to do in the world but cling to any old thing," he muttered, wistfully, as he reluctantly let go of the friendly post and struck out for his home.

By the most tireless patience, unceasing vigilance, and frequent distressing contortions, Mr. Morenstout at last gained a shoeshop on the next corner without any more fumbles.

"Say," he gasped, breathless from his exertions, "have you anything that'll make it a little less slippery walking?"

"Yes, Sir," replied the cobbler, with reassuring confidence. "Here are ice-creepers that I can fasten on your heels in a minute, and with which you can't slip. Steel points, you see, Sir, that you can turn back against the heel so as to be out of the way when not in use."

"Good! Very good!" exclaimed Mr. Morenstout, fervently. "And, say; put a couple of rows along the soles, too."

"Oh, you don't want them there, Sir," remonstrated the shoemaker. "You can't—"

"Do as you're told! Do as you're told, Sir! I'm paying for this!" snarled Mr. Morenstout, pausing in mopping his streaming brow to glare at the other.

With a beaming smile Mr. Morenstout stepped from the shoeshop and proceeded toward home, a smile that grew more and more beaming as he grew more and more confident in the barefooted security lent by the ice-creepers.

"They're great!" exulted Mr. Morenstout, even carrying his triumph so far as to make tentative tries at slipping and finding it impossible. "They are great! I'd like to shake hands with their inventor. I'd set up the cigars. Blame me if I wouldn't."

"Hello, Maria; come and see what I've got," he called to his wife, as he came stamping into the hall of his home. "Just see here—and here. There's no more slipping and sliding for me."

"John!" screamed Mrs. Morenstout, aghast. "You're ruining that hardwood floor. You've got it all scratched and—"

"I don't care," interrupted Mr. Morenstout, recklessly. "It's like you to prefer an old hardwood floor to your husband's safety. But just look here—why, I couldn't slip or fall if I wanted to."

As Mr. Morenstout exulted this last exultation he made a vigorous attempt to slide. His feet, unfortunately, landed on a rug, which immediately slid, as rugs on hardwood floors always do. His feet flew out from under him and he came down on his back with a violence compared to which his former falls were but as the gentle settling of thistledown upon a lush meadow.

"Served you right," was the immediate and unsympathetic verdict uttered by Mrs. Morenstout, as her husband ruefully blinked the tears out of his eyes, wondering whom else the earthquake had destroyed.

AN UNSUCCESSFUL FUNERAL.

THE Bowerville Brass Band got its first public engagement when old man Hoog died. It is not disrespectful to refer to the late lamented as "old man Hoog," for he had been thus called every day for the forty years preceding his death, and, as he owned about half the rented houses in Bowerville, and took furniture where he could not get the money for rent, the appellation was not one of love and esteem by any means. But he had money, and he was to have a fine funeral. When a man may have a brass band at his funeral he may be said to have achieved some sort of success in his life. And when he is going to have such a band as the Bowerville Brass one at that ceremony, there are going to be sad features connected with it.

Mrs. Hoog engaged the band herself. She disputed with Herr Spleinfuts over the price for some time, but at last they agreed on a figure. Then Mrs. Hoog looked over the music of the band. It was arranged by numbers. That is, "No. 1," as the bandmaster would call for it, would be "Hail to the Chief," for instance. For convenience sake, the leader always told his men to play "Number" so-and-so. Mrs. Hoog selected the following programme:

Dead March in Saul. (To be played while procession leaves the house.)

Chopin's Funeral March. To be played after entering the church, the band remaining outside.)

"Flee as a Bird." (March to the cemetery.)

"Nearer, My God, to Thee." (At the cemetery.)

"The Sweet By-and-Bye." To be played coming home.)

Now, it chanced that Herr Spleinfuts could not read English very well, so he submitted the programme to the editor of The Bowerville Clarion, who was not indulging in any inconsolable grief over the taking away of old man Hoog. The editor had been evicted from his former office, also from his residence, because The Clarion did not bring in enough money to meet the demands of Hoog. When he saw the programme he said:

"Say, this isn't written very plain. Better let me fix it up for you, and give you the numbers of the selections, so you'll get everything straight."

"Choost it," agreed Herr Spleinfuts.

On the morning of the funeral the editor handed the Herr the revised list of music, with adjurations to play the numbers indicated, and to play them well.

The weeping widow was musing over the year of black dresses that was ahead of her when the band struck up the first number. She gasped with astonishment when it blared forth the opening bars of "When You Ain't Got No Money, Why, You Needn't Come Around!"

"Mercy!" she whispered to the preacher. "What's wrong with that band? Go and tell them to stop that awful tune."

But the preacher was informed that the music was in accordance with the orders of Mrs. Hoog, and when Spleinfuts showed him the programme, with the numbers plainly written out, he retired from the argument with a thrill of horror in his soul. And the rollicking admonition to remain at a distance when financially embarrassed gave joy to the hearts of those who had known and honored the dear departed in life.

At the church the mourners and others had fairly seated themselves, when from the outside came the jingling cadence of:

"A Little More Work for the Undertaker."

There was suppressed excitement and much uneasiness in the church, but everybody seemed to realize the solemnity of the occasion and the band was permitted to play the selection through. But when the mournful gathering came out to take up the march to the cemetery there was a baleful glare from beneath the black veil which hid the features of Mrs. Hoog. And, but for the looks of the thing, she would have stopped the funeral or jumped from her carriage, when, far ahead of the hearse, the musicians led off with:

"Enjoy Yourselves!"

It was a ragtime drive to the little cemetery, and a wrathful widow, who stepped from her carriage at the end of that drive. But the band had considerably stopped at some distance from the Hoog lot, and the editor of The Clarion, a grim smile fighting for mastery of his features, was lurking near at hand, with his notebook ready for service. The disconsolate widow had to be supported by several female friends, but she seemed able to stand alone, and even to jump in the air, if they would let her go, when the band roared forth:

"Throw Him Down, McCluskey!"

For, by a strange coincidence, the undertaker's name was Francis McCluskey. The sudden onslaught of melodious advice rattled him so that he had to lean against a tombstone and conceal his features in his hat. Then the band filed sobbily from the cemetery and took up the homeward march, their feet lightened by the strains of:

"You'll Get Alf That's Coming to You."

Mrs. Hoog's carriage passed the band on a fast trot before it had gotten fifty yards from the gate, but Herr Spleinfuts stuck to his contract and played the tune all the way to town.

That week's Clarion contained a beautiful account of the funeral and devoted some twenty lines to expatiating upon the "timely and appropriate music, which was selected by the sorrowing relict of the highly esteemed deceased."

But Herr Spleinfuts has discovered that the last time on the programme was far from prophetic, and now he is suing Mrs. Hoog for the amount of his bill.

W. D. NESBIT.

YUM SEN.

YUM SEN was ironing. The long sleek cue swayed rhythmically to and fro, and gave an extra little switch as the flatiron dug more heavily into the bosom front. Yum Sen was thinking. His face ran a race with a brick wall in expression. The brick wall won.

From the back room came a babble of voices mingled with the combined odor of chop suey and soapsuds.

"Fool," droned Foo Lab, "the Joss-house is good enough for me." "Me" began in the bass clef and ended somewhere in the treble. There was a quarrel brewing out there. Every note possible and impossible, of every scale, known and unknown, sprang from three Mongolian throats at once.

Yum Sen chewed his gum and went on thinking.

Yum Sen was in love, deeply, desperately in love. It was three months now since he first realized that this dreadful calamity had overtaken him. How it happened he never knew. It probably came with his conversion. All his virtues dated from that time, he would have told you, had you asked him.

Yes, he was in love. She had come into his life so quietly, this Mission girl in white, that he never knew till now what she had been to him—what she might be to him. His thoughts grew confused. A faint suggestion came to his mind of the time when he "hit the pipe." That was before he joined the Mission.

The iron was getting cold. He took a fresh one, turned the shirt, and began thinking again. There was but one thought left to think. Yum half closed his slanting eyes and saw her with his mind's eye; the fair hair, the saucy mouth, the slender neck, the white—Ding! The door opened with a clang and let in a customer—three collars and a shirt.

* * * * * * *

It was Sunday. The Bowery surged with a ceaseless throng of Celestials. Here they poured from the narrow alleys, there they entered them, vanishing as mysteriously as they had appeared. Yum Sen was in the crowd, but not of it. He made his way straight to the Mission, a Bible under his arm. He was thinking of her. He would see her. Unconsciously his steps grew to strides. Near Baxter Street Fou Hop joined him. Together they went into the Mission. Yum read for the hundredth time the text asking the weary to come unto Him. He knew what it meant. She had told him.

"Good afternoon, Yum." The fresh, girlish voice rang in his ears. His heart thumped.

"Nice afternoon," he sang slowly. Not a muscle stirred in that maskilke face.

During the lesson his eyes did not leave her face. His sluggish mind found some change in her. There was a new light in her eyes. She was teaching him something, but he only half heard:

"The Lord is."

"The Lold is," he repeated.

"My Shepherd."

"My Slepled."

"I shall not."

"I slall not."

"Want."

"Wongt."

Her eyes beamed upon him. "Very, very good," she said, with an approving smile.

Before Yum knew it the lesson was over. It was never so short before. He rose reluctantly.

"Good by," she exclaimed, as he was leaving, "I want to shake hands with you before you go. You have been such a good scholar, and I am not coming back. This is my last Sunday. I'm—I'm—going to be married." She looked up happily into his face.

A pair of expressionless eyes met her coldly, but Yum's heart beat madly within his breast.

* * * * * * *

Sunday night. There was no light in Yum Sen's laundry. The red curtain was pinned up and the door closed fast.

Yum sat very still. He wasn't thinking. There was nothing left to think about; he was feeling. Motionless he sat, as if carved in wood. Suddenly he got up. A wild light blazed in his eyes. The Bible—her gift—lay on the table. He grasped it convulsively, and with a wild curse flung it into the fire. The flame hissed, leaped up, and illumined a face distorted and tortured. Yum watched it, every nerve on edge.

"The pipe went out," he muttered, as the last flame flickered and died.

Somewhere was his long-neglected treasure box. Instinct led him on; he had ceased to reason. His trembling fingers fumbled in it, and closed over his Buddha beads. Scenes of childhood rose up before him; prayers so long forgotten rose to his lips. Mechanically he fell into the old familiar posture of his youth.

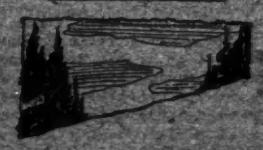
"Joshouse good enough for me," said Yum.

Most Popular.

Some like the breezy Western girl,
With all her dash and go,
And some the dreamy Southern maid
From where the roses blow.

While others still the Eastern girl
Do make their pride and toast,
But "Central" really is the one
We call upon the most.

McLANDBURGH WILSON.



THE DIFFERENCE.

Miss Milburn—But, papa, he is a man, after my own heart.

Fond Papa—Yes, and after my own money.

SALMAGUNDI

Trials of a Conductor.

IT WAS an upward-bound Broadway street car. The conductor had had his troubles for the day, first with a refractory gentleman who refused to get out of the middle of the doorway because he said if he had to stand he would stand where he pleased; then with two "drunken ladies," who insisted upon going to sleep on their neighbors' shoulders, and now with a stout, red-faced woman, who shook her fist in his face and demanded his number.

"I shall report you," she puffed, growing redder with each word. "How dare you start the car like that when I was not yet on?"

"Well, madam, you had plenty of time to get on," replied the conductor.

"None of your back talk, Sir," she shouted. "I only had one foot on this car. You might have broken my leg starting off in that fashion. I know a woman who got $3,500 damages for less than that. I shall take your number, Sir," and she began busily fumbling for paper and pencil.

"Well, you can take my number, I don't care," answered the conductor. "I reckon all them men on the back platform will come as witnesses that you was the one at fault. This ain't no reception room, where you kin entertain your friends wid one o' your feet on the car an' one off."

"I wasn't entertaining my friends," said the woman. "That lady I was talking to was a lady from Texas, and I hadn't seen her for thirteen years. I should think I had a right to stop and speak to her."

"Not wid one o' your feet on this here car," snapped the conductor.

"Sir, you are rude and I shall report your conduct to the company. I shall keep my feet where I like and shall speak to whom I like. Stop this car instantly. I won't breathe the same air with you," and in haughty indignation she swept off the car, followed by the derisive jeers of every man on the back platform.

Equality on the Elevated.

A messenger boy sat enthroned there
In a crosswise seat of a crowded car.
He laughed in his sleeve at a millionaire
Who hung to a strap and scowled afar
At the boy, who was reading a yellow yarn
Of Wilfred Montrosser's Montana caper,
While the man of wealth held tight to his strap
And longed for a glance at his morning paper.

A Matter of Gloves.

THE man who finds fault with everything except other men, said he was proud of his sex. The woman said she did not see why he should be.

"Because of their gloves," said the man. "Did you never notice how much better men's gloves look than women's? Go into any public conveyance and look at the gloves of the passengers, and you will be impressed by the superior condition of those worn by men. Two-thirds of the women you meet cover their hands with coupe kid decorations that are shockingly soiled and worn. It is not only persons of generally shabby appearance who are guilty of worn-out finger tips and ragged seams; many who are otherwise well-groomed and who could afford to get new, fresh pair of gloves every day, are equally culpable. Men would be ashamed to go on the street wearing such disreputable things, but women flaunt them unblushingly."

"That sweeping condemnation is unfair," protested the woman. "The condition is easily explained. Women wear their gloves much more than men, and besides it is awfully destructive to fingers tips to dig around in purses for change and samples, and to handle candy, to turn over books, and to examine dry goods."

"Now you have jumped the subject," said the man. "I am not talking about cause, I am talking about effect. The majority of men certainly do wear better gloves than the majority of women. You cannot deny that."

"That is true," the woman admitted. "I cannot deny it; they can better afford it also."

going on somewhere the whole year round. Naturally, we expect a big demand for masks about Thanksgiving and holiday times when everybody hereabout is supposed to be making merry, but it certainly does stump me why so many people keep on buying the things after the festal season is ended. From year's end to year's end small dealers in notions and knick-knacks all over town give us orders for false faces. Of course, they must sell them, else they would not continue to buy, but by whom and where they are worn is one of the problems for statisticians to figure on."

A Great Invention!

Buyer—Is this suspender is called the hydrophobic?

Drummer—Yes, Sir, these suspenders shrink when the wearer approaches water, and when he gets near a puddle they contract, lift him over it, and land him dry-shod on the other side.

"Oh, Henry! Come and see de fight!"

But it was only one of the clerks with his arms full of overcoats.

A Ballade to the Divorcees.

DRESSED in a gown quite fluffy,
She smiles coquettishly,
With hair dressed rather puffy
She acts so pettishly,
She's happy and she's joyful,
Her heart is light and gay,
She sets in novice coyful—
She was divorced to-day!

Her dimples look quite pretty
Set in her cheeks so pink,
Of girls in town or city
She's happiest, I think;
Each soft blue eye just twinkles
In quite a roguish way,
Her face is free from wrinkles—
She was divorced to-day!

She's happy, prim, and prunkful,
She's free from every ollie,
She's merry and she's thankful
She has no cross to bear,
She's on the outs with Cupid,
Snoffs at his scant array,
And thinks that Love is stupid—
She was divorced to-day!

F. F. PITZER.

Where Do the Masks Go?

WHILE people are trying to figure out what becomes of pins and tins, I wish they would compile a few statistics on the distribution of false faces," said a maker of masks, looking by the number of them we sell there must be some kind of carnival

A Mistake That Paid.

MISTAKES made on purpose are sometimes profitable, and W. H. Hicks illustrates it thus:

"A concern owed me $50, and repeated duns did no good. The debt was perfectly square, but I had no documentary evidence on which to base a suit, so I decided to be easy and secure such proof.

"I sent a bill for $100, with a caustic letter, figuring that the concern would answer, repudiating the claim of $100 and saying that the amount was $50. Once I got this admission I would be in a position to sue.

"Imagine my surprise and pleasure when I received a letter from the manager of the concern apologizing for the delay, and inclosing a check for $100."

What Might Happen.

THE duty of sixty-seven cents a ton having been removed, the country was flooded with coal from the pauper coal mines of Europe and Canada. Prices fell until the phenomenally low figure of $7 a ton was reached. At this point the coal barons held a conference.

"We can't play to the business under such conditions!" they said indignantly. "Seven dollars a ton won't support us in the style to which we have become accustomed. We'll close up the mines."

And they did.

Then the foreigners, having control of the situation, advanced prices until coal was selling at $15 a ton. At this point the consumers realized their folly and begged the American coal operators to resume.

"Open the mines," they pleaded. "We don't mind paying a reasonable price for coal—say $9 or $10 a ton. In fact, we're used to that sort of thing. But do save us from those pauper coal mines!"

But the operators were firm.

"Can't think of it," they said. "You didn't appreciate a good thing when you had it. We don't propose to go through the worry and anxiety we've had in the coal business for the past two years. We need a rest."

"Gee whiz!" said the plain people. "There's nothing to do but grin and bear it. But it ought to be an awful lesson to us not to tinker with the tariff."

How They Helped.

THE poet was in a brown study. With him were the reporter and the man from Harlem. That is, they were in his company, not in his brown study. In despair, for the press-room was calling for copy, the poet said: "Can't one of you help me out? Give me a second stanza to fit the idea of this:

Grow as the wild flower grows,
Nothing to bind;
Go as the song bird goes,
Free as the wind."

"Is that poetry?" queried the man from the district of flats. "Why, that's easy! Here, take this down:

Cheat as the gambler cheats
Palming his hands;
Heat as the janitor heats,
Against commands."

A sound like the wail of the lost spirits in a slime production of "Faust!" escaped from the poet's lips.

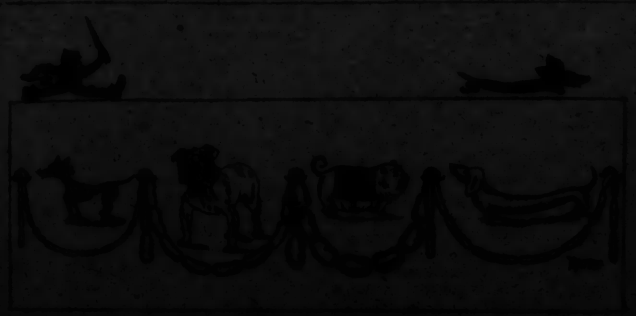
"Pshaw! You prosaic people shouldn't try to struggle with verse," said the newsgatherer. "Where's your rhythm? Where's your alliteration? Your first couplet might do, though, with this for the second:

Beat as the butcher beats,
Selling bad brands."

He turned triumphantly to the poet for approval, but it came not. The poet had fainted.

What is the Reason.

I HAVE been trying to determine whether east side people are better or worse than west side folks," said the city salesman. "What set me pondering the subject was the number of billboard church advertisements seen east of the avenue. They outnumber those seen west of the dividing line three to one. In fact, when you get in the region of the North River you seldom see a poster calling your attention to divine services, while over near the East River every a hall and window is decorated with a flaming placard announcing that the Rev. So and So will preach at such and such a place on a certain date, and inviting everybody to attend. I am unable to find out why the section of the city nearest Brooklyn should have a monopoly in evangelical advertising. I do not know whether it means that west side folks are already so good that they do not need to be reminded of religious services or that they are too far past redemption that such reminders are of no avail. I wish somebody who does know would set me right."



A CORNER IN RED EARS

HEZEKIAH GRAHAM of Jenkins Corners was the possessor of a fine farm and a goodly portion of this world's goods. Yet he was far from happy, for fate, as a drawback to these advantages, had made him the most bashful man in that part of the State. This was unfortunate, as he was madly in love with pretty Irene Evans. There was to be a husking bee at the Corners the next week, and, as every one knows, if you have the good luck to find a red ear of corn at a husking bee you have the privilege of kissing the girl of your choice. In fact, custom demands one should, no matter how bashful he may be. Even the thought of the soon coming husking bee didn't comfort Hezekiah much.

"If I could get a red ear," he mused, "it would sort of hearten me up, and I might speak to Irene. But I never have no luck at huskin' bees."

Dave Ferguson, drummer, was equally lacking in world's goods and in bashfulness. An unfortunate run of luck at poker the night before had broken Dave, and he was now sitting in his room in the country hotel looking at his samples of "fine assorted paints."

"If I telegraph the firm for coin," mused Dave, "they'll think there's something wrong. But somehow I must raise the funds to pay my bill and get to the next town."

He left the hotel and wandered out on the street, considering ways and means of raising money. Near the entrance to the hotel he heard two of the natives of Jenkins Corners discussing the coming husking bee. Dave remembered the tradition concerning the red ears of corn. Suddenly the thought flashed into his mind that the paint in one of his samples was almost the color of a red ear of corn. Why not? Yes, it could be done. An hour later, with some samples of red ears in his pocket which would have deceived an expert, Dave Ferguson was walking into the country. He had decided that it would be easier to dispose of his goods on the neighboring farms. If unsuccessful he could try the village.

"I can't lose," soliloquized Dave. "And I think there ought to be a gold mine in it."

The first farm Dave reached was that of Hezekiah Graham. With an air of profound mystery Dave led Hezekiah back of the barn and exhibited his samples. In the whole State Dave could not have found a more willing customer—after he had explained how the fraud on Cupid could be worked.

"It's as easy as falling down," said Dave. "When you go to the crib to get your supply of corn just slip these red ears in the pile. Then, after a little, you come on them, as if it was an accident. Then it's you to the girl of your choice, and everybody happy."

"What's the price?" inquired Hezekiah.

The red ears and the paint combined had probably cost Dave about half a cent apiece. But he noticed the eagerness in his customer's tones. And Dave was a shrewd salesman.

"Two and a half apiece," he replied glibly.

"I'll take four," said Hezekiah without hesitation, handing a ten-dollar bill over to Dave. Then, as Dave was turning away, a bewildering brilliant idea struck Hezekiah. There had been corners in wheat and stocks. Why should there not be one in red ears?

"How many of these ears have you got left?" he called after Dave.

The unscrupulous Dave had only two, but he was too shrewd to say so. Instead he promptly replied:

"Four dozen."

Hezekiah gasped. Four dozen red ears at $2.50 apiece was $120, in addition to the $10 he had already spent. But Irene was a very pretty girl, and such a chance would never come again.

"I'll take them all," he answered with a promptness which did credit to the strength of his feeling for Irene. "Of course, it's understood that you won't sell any to any other fellow?"

"Sure thing," answered Dave, equally astonished and delighted at the magnitude of the order. "So you're going to corner the supply? You certainly have the true sporting blood. I'll bring them out this afternoon and get the money for them."

Until late that afternoon Dave was kept busy changing ordinary ears of corn to ones of the much-desired color. Then he drove out to Hezekiah's farm, delivered the goods, and received his money. An hour later he had paid his hotel bill and was on his way to the next town.

"That's easier and more profitable than trading gold bricks for diamonds," he observed to himself as the train drew out of Jenkins Corners. "But I'll bet at that the Rube gets his money's worth."

Hezekiah did. While Jenkins Corners lasts the memory of that husking bee will never be forgotten. In his anxiety lest his fraud be detected, if he made too many attempts to introduce the painted red ears, Hezekiah emptied two dozen into the first supply of corn he took from the crib. The crib stood in a dark corner of the barn, so his deceitful manoeuvre was not discovered. A few minutes later he unhusked the ear. Pretty Irene Evans was sitting near him. It was the first time Hezekiah had found a red ear at a husking bee. He felt certain that the results of that one red ear were worth more than the price he paid for the whole supply. But that was only the beginning of bliss. During the evening, as Hezekiah found ear after ear, he aroused first the envy and then the mirth of all present. The big barn rang with yell of laughter and approval as Hezekiah with each ear claimed as his right the precious privilege which his "discovery" gave. Irene at first seemed vexed, but everybody was too good-natured for her vexation to be long lived. And in the bottom of her heart Irene was very fond of Hezekiah. The only person who seemed really put out was Tom Atwood, a rival of Hezekiah's for the favor of Irene. And Tom! Well, Tom was out of the running that night. Who could stand against a man who had cornered the available red ear supply? When the end of the evening came Hezekiah felt that he had had the most enjoyable time of his life. He still had twenty-five of Dave Ferguson's red ears left. But they would probably come in well on another occasion. Even if they didn't Hezekiah did not regret his investment in the least.

Hezekiah walked home with Irene from the husking bee. He found that his bashfulness had to a great degree vanished. Probably the finding of twenty-four red ears at one husking bee is one of the best cures for bashfulness that can be found. Irene was at first inclined to be a little angry. Hezekiah had enjoyed too many privileges for one man in one evening. But by the time they reached her house discontent of spirit vanished. Possibly when they parted at the gate Hezekiah found that he had another red ear in his pocket.

It was some time after that famous husking bee that Hezekiah gained courage to tell Irene of the deceit he had been guilty of. Irene was mightily indignant. At least she seemed to be.

"But I just couldn't help it," pleaded Hezekiah. "When that fellow came along and I thought of the scheme, and of you—"

"It was very wrong and deceitful," interrupted Irene in severe tones. "The idea of your pleading you were so bashful and then smuggling in two dozen red ears!" Having asserted the proprieties and crushed the erring Hezekiah Irene relented. "And it was very extravagant, too," she added a little shyly. "For, you see, there was no real need of any red ears where I was concerned, Hezekiah."

SOME "TOM" REED STORIES

A PARTY of New England men were seated at a table in an up-town café, and the conversation turned upon the career of the late ex-Speaker Reed.

"I suppose," said a man from Eastern Massachusetts, "that no political orator who has visited Massachusetts in late years has caused more embarrassment to local speakers than Reed. He was always popular in Massachusetts, and even men with State reputations considered it a difficult task to hold an audience after he had spoken. I remember an occasion about eighteen or twenty years ago when Reed addressed a large audience in Lynn. One of his most attentive auditors was James N. Buffum, prominent manufacturer, famous contemporary of Phillips and Garrison in the old days, and stanch Republican, his allegiance dating from the inception of the party.

"When Reed had finished his speech the Chairman introduced Capt. John Gregory Bishop Adams, who was always affectionately referred to by his neighbors as 'Capt. John Ginger Bread.' Now Adams was a good speaker, witty, and popular, and had the reputation of never having been bested in a battle of wits with any one in his audience. He was at that time Postmaster of Lynn. As Adams began his speech he observed Buffum leave his seat in the front of the house and slowly make his way toward the door. Adams was plainly nettled. He stopped in the middle of a sentence and, waving a hand in the direction of the retiring Buffum, said:

"'Ladies and gentlemen, time was when Mr. Buffum would come to a Republican rally and stay until the lights were put out.'

"Old Jim stopped in the centre of the house, and every eye in the audience was fixed upon him. 'Ladies and gentlemen,' said the old Abolitionist, half turning toward the stage and speaking very deliberately, 'what the Captain says may be true, but I came here this evening to hear Mr. Reed!'

"In the roar that followed at the Captain's expense none joined more heartily than Reed.

"I recollect another occasion a few years later, when Greenhalge, afterward Governor, was making his first canvass for Congress. He and Lodge, now Senator, and at that time also a candidate for Congress, had 'swapped off' for the night, Lodge speaking in Lowell and Greenhalge in Lynn. Greenhalge, we knew, had been Mayor of Lowell and was a successful lawyer; beyond that no one seemed to know much about him. Reed was the first speaker, and the man from Maine was at his best. I well remember his opening words, as he came up to the footlights, planted one broad shoe on the rail, and dropped his hands into his pockets: 'Mister Chairman, ladies and gentlemen,' he said, in that inimitable drawl so dear to the ear of the rural New Englander, 'I didn't come here tonight to say anything harsh or unkind about the Democratic Party!' The laughter that followed this sally marked the beginning of as enthusiastic a political meeting as it was ever my good fortune to attend. It was 'great applause' and 'prolonged laughter' for an hour and a half.

"As Reed finished and Greenhalge started in several hundred in the audience began to push their way toward the exits. Yes, I'll confess I was one of them. I hadn't listened to Greenhalge's program, however, when a great shout caused me to stop.

"'You may disembarrass yourselves,' as the notes ceased, 'the Mugwumps find themselves in a very perplexing situation and they don't seem to be able to get out of it. How hard they try to make us believe they are happy! They remind me of the story of a party of men who went into the woods on a camping expedition. Of course, the first thing after arrival at camp was to select a cook. After considerable discussion it was agreed to draw lots for the first victim and, further, that any one who might be detected grumbling about the food should be immediately installed in the improvised kitchen.

"'During the first day there was no audible protest. On the following morning, however, when biscuits were served, there were looks of dismay on the faces of the campers. These biscuits were black on the top and black on the bottom, the two surfaces as hard as boards, and the centres almost raw dough. In fact, it was protruding from the sides. Every one was half famished, but each seemed to be waiting for his neighbor to make a beginning. Finally a member of the party picked up one of these creations, and as he gingerly suspended it between his thumb and forefinger all his pent-up wrath broke forth:

"'"This is absolutely the worst, the meanest, the most abominable, specimen of alleged cookery it has ever been my misfortune to behold!" he said. But as he saw the gleam of triumph in the eyes of his comrades and realized the pit his rage was digging for him, he hastily and with a vehemence born of trepidation added:

"'"But I like it!"'

"Everybody stayed to the finish."

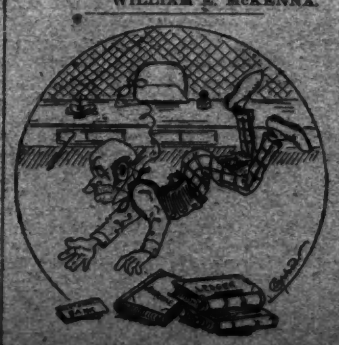
Another Noble Work.

IT is reported on reliable authority that a prominent philanthropist, who declines to permit his name to be published, has established a fund to aid the deserving infant industries of the United States in their terrific struggle for existence. This gentleman has been identified with some of these infant industries since their infancy, that is to say, since their comparatively early infancy. He has watched them carefully and has noted sympathetically their frantic appeals to Congress whenever they had the colic. He has observed with satisfaction their phenomenal growth, especially in the matter of appetite. But he has also observed with sorrow that Congress seems unable or unwilling to give them enough to eat; that, no matter how much they get to eat, they are always hungry.

As a partial remedy for this sad state of affairs he has instituted this fund. No deserving infant industry will be excluded from participation in its benefits. A committee will be appointed to manage the fund and inquire into the claims of applicants. The test of desert will be ability to howl. The industries that howl the loudest will be deemed to be the hungriest and will be fed accordingly. The ancient and venerable bugaboo of the pauper labor of Europe will of course be used by the committee as an aid in applying this test. Any industry that fails to howl at the mention of the pauper labor of Europe will be dismissed as unworthy of further consideration. The nourishment supplied to worthy applicants will, of course, increase their strength and especially their lung power, and they will be enabled to tackle Congress with renewed vigor. It is hardly necessary to say that there is no expectation of satisfying their appetites.

It is hoped that the fund will be increased by gifts from many quarters. It will be perfectly apparent that the project is one which will absorb all the money that may be bestowed upon it.

WILLIAM E. McKENNA.



GOING OVER HIS ACCOUNTS.

WHEN "UNCLE JOE" REFORMED

JOE CRANDALL, or "Uncle Joe," as everybody called him, was a jovial, whole-souled old fellow who lived, flourished and got away with his three square meals a day in a certain New England town some years ago. He was not long since "gathered to his daddies." Many odd stories of his sayings and doings are still current in the neighborhood, and the chief regret of the hearer when he listens to one of these yarns is that "Uncle Joe" isn't alive to tell it himself. He could render it so much more picturesque by working in all the fancy little touches that no one else would ever think of—and the flavor of the story, like the flavor of a pudding, depends a good deal on the "trimmings."

When "Uncle Joe" told a story he never omitted the "trimmings." Some folks were uncharitable enough to intimate that "Uncle Joe" would just as soon lie as not if by doing so he could add to the interest or picturesqueness of his many yarns. Be this as it may, even "Uncle Joe's" best friends were reluctantly compelled to admit that from long practice he had acquired a fluent facility for twisting the truth into strange and unrecognizable not at the same time most interesting shapes.

In this particular line he could easily distance all competitors, and such was the reputation he bore in the neighborhood where he was best known that whenever any unusually tough and doubtful story got into circulation, its authorship was at once and in most cases correctly attributed to "Uncle Joe" Crandall.

But in the course of time a great change came over "Uncle Joe." For more than sixty years he had struggled with the New England climate and various hardships that fall to the lot of man, wrestled with marvelous stories and incredulous hearers, worn out numberless chair-seats in the village grocery, and eaten tons of cheese and crackers that he never paid for, and in the natural course of events he must expect sooner or later to fall by the wayside.

He accordingly began making the necessary preparations for a peaceful exit from this vale of taxes and tribulations, Sheriffs' sales, weddings, donation parties, Sunday school picnics, county fairs, cyclones, and other little trifles of that sort.

The cause of "Uncle Joe's" sudden attempt at reformation was duly set forth in a speech, or "experience," delivered by him at the weekly prayer meeting one Wednesday night, which was the first intimation his friends had received of his resolution to give up his old habits and lead a different life. He came in late, with lugubrious countenance and dejected mien, and quietly took a seat in the corner. He appeared to take a deep interest in all that was going on, and during a lull in the proceedings, along toward the close of the meeting, when the brothers and sisters had finished giving in their testimony, "Uncle Joe" arose, hemmed a couple of times to get his voice in working order and gain confidence in himself, and then started off as follows:

"Brethern an' sistern, as I jest I may call yes 'thout givin' offence, I've bin thinkin' while I've bin settin' here to-night of what a poor miser'ble, wicked, no-account sinner I've bin all my life, an' how thankful I orter be that I still have a chance to repent of my many sins an' iniq'ities an' climb over the Gospel fence into the straight an' narr'w path. I have bin doin' a pile of thinkin' on this air sinner ever since t'other night when I was visited by a strange vision, brethern an' sistern, such as it is given to few mortals to behold, an', one which caused me to suddenly open my wuful eyes an' see the awful brink on which I was standin'.

"I believe that vision was a solemn warnin', brethern an' sistern, sent to notify me that I have only a few brief years yet to scoot around on this here mundane sphere, as I've heard it called, an' admonishin' me to make hay while the sun shines an' prepare for that visitor which cometh like a thief in the night. I acknowledge that I have done a good many things I hadn't orter done in the past. I never killed a man n'r robbed a hen-roost that I know of, but I have bin a awful liar. Yes, brethern an' sistern, I have told a heap of yarns that wouldn't bear inyestigatin' in the years gone by, but from now on I'm gointer swear off on that sort o' thing an' start out in the somewhat narrer but invitin' pathway of truth which I orter followed long ago but didn't."

Here "Uncle Joe" paused for a moment, as'tu to collect his thoughts and ascertain "where he was at," and then went on:

"Yes, neighbors an' feller-citizens, I should say, brethern an' sistern, from now on I'm goin' ter quit lyin' fer good an' all, an' lead a different life, but I see you all actin' as if you were gittin' in a hurry to hear about the strange vision which has wrought this remarkable change in me, so I will tell the story.

"You see, it happened when I was comin' along this road t'other night on my way home from The Corners, mounted on the old mare. She was walkin' slowly along as usual, (she ain't a very rapid traveler, the old mare ain't,) an' I was passin' the time away by whistlin' 'Old Hundred,' 'Yankee Doodle,' 'Comin' Thro' the Rye,' an' other populish tunes to myself, when, just as we struck the edge of the woods t'other side of Sam Baggott's swamp, Maude began to prick up her ears an' prance around an' act perter mussy like as if she suspected suthin' was wrong somewhere but she didn't know exactly what it was. But I didn't see n'r hear anything unusual, so I hit the old mare a poogie of licks with the end of the halter, just to let her know I was on hand personally myself an' didn't care for none of her tricks, an' she settled down to business agin an' traveled on.

"A minute later I was somewhat surprised, as you kin readily imagine, by havin' a solitary hoosenuck, such as the novel writers tell about, range up along side of me an' the old mare as suddenly as if he had risen up out of the airth; an' the queer part of it was that the stranger's horse traveled along over the frozen ground without making the least noise whatsomever. The animal he rode seemed to keep right alongside of old Nance easy as lyin' or fallin' down stairs, but I'll be eternally durned—I mean I'll be blessed, brethern an' sistern, if I heard the critter's hoofs strike the ground onst durin' the hull trip—not a solitary time!

"The feller ridin' this strange hoss was a queer-lookin' old chap, dressed all in black, an' with about as solemn an' ugly a lookin' figger-head on him as ever had the misfortune to meet up with—especially after dark—an' I wasn't tickled more'n half to death at havin' his society forced on me, as I may say, in that d'rupt an' off-hand fashion.

"He was queer, an' his horse was queer, an' purty soon I noticed another queer thing. Runnin' along by the side of the old feller's hoss, with its tongue hangin' out about a foot, was a strange sort of animile which I suppose was intended for a dog. It looked suthin' like a cross between a greyhound an' a catamount, much as anything, an' when I first clapped my eyes onto the critter I spoke up an' saw it.

"'Stranger, I'm beat if that dog of yours ain't a mighty ear'w-lookin' pup. Never seen one equally like it before that I remember. Where'd you git the animile, anyway?'

"The extraordinary old sarcasm on the hoss wasn't quite enough to provoke even a civil question like that, yet instead of replyin' he jest turned his head an' looked round at me in a haughty sort o' way, as much as to say, 'Reckon you an' me hadn't never bin introduced to each other, so far as I kin recollect, an' I dunno as it's any o' your business 'bout the pup, anyhow.'

"I seen they wa'n't no use tryin' to draw him into a conversation, so I give it up, an' we rode along giarin' at each other over an' anon or thereabouts, but not sayin' anythin', though I had mighty hard work to keep from rippin' right out an' tellin' the unmentionable old cuss—I should say chap—what I thought of him, right to his face, an' I've bin sorry ever sence that I didn't, seein' I'm proberbly never goin' to have another chance as good as that.

"Waal, to continue on with my story, jest as we come to the turn o' the road by the big pine tree this side o' Bill Perkins's cow pastur', the old crank on the black horse hauled up on the bridle reins all at onct an' brung his plug to a halt, an' then, wavin' his paw at me, he sez, mighty slow an' solemn-like:

"'Mortal, ajew! When next we meet it will be in my kingdom!'

"Yes, brethern an' sistern, them's the very words he uttered, an' then he give another wave of his flipper around in a commandin' sort o' way, an' as he done so the ground opened right where he an' his horse an' queer-lookin' dog was standin', an' the hull caboodle of 'em plunged into the openin', while a lot of blue fire an' smoke shot up in the air an' a smell of brimstone come puffin' out into my face so strong it nearly knocked me off old Nance's back; an' then the hole which they'd disappeared into closed up an' become solid ground as'n quick-er'n you c'd say Jack Robinson!

"Then it suddenly come to me who my visitor was. I had begun to suspicion it before, an' now I knew fer certain that the ugly-lookin', queer-actin' old feller in black was old Be'lzebub himself goin' round seekin' fer a rearin' liar to devour, as the Good Book tells about. But, glory hallelujah! I have had my eyes opened to the error of my sinful ways, as I remarked on the start, an' I purpose to do what's right after this as nigh as I kin figger it out; an' if the old feller ever tackles me I'm gointer give him one of the liveliest tussles before he gits through with me that he ever had in his life, an' don't you forgit it!

"Remember me in your petitions, brethern an' sistern, that I may keep on that I have started out in to-night an' continue faithful to the last."

"Uncle Joe" sat down; a hymn was sung, and then the audience arose and passed out in painful silence.

The next day a delegation of the brethren, headed by the minister, called on the new convert at his place of residence and said that they were greatly pleased to hear that he had concluded to give up lying and lead a different life, but at the same time there were some statements in his remarks of the evening before which sinners and outsiders might scoff at, possibly, and they (the brethren) sincerely were afraid a sudden reformation was going to be altogether too much of a strain on his mind. So they said all things considered, perhaps he had better take things easy for awhile, and not attempt to hold forth in meeting again until he had had plenty of time (say six months or a year's probation) to make him gradually to wean himself from his old habits.

WILL S. GRIDLEY.

A TIMELY ARTICLE

"AH," observed Mr. Toddlemore, slowly folding his paper as an 'th small brows disturbingly, "'In view of my trip to Florida next week, here is a very timely article, a very timely article indeed. It's really surprising, my dear, how frequently I find helpful and useful hints in this paper. It really is."

"What is it?" inquired Mrs. Toddlemore, turning up the lamp. "An accident insurance advertisement?"

"No, it isn't," replied Mr. Toddlemore irritably. "Neither is it a mimeograph on the best and most fatal way of poisoning Fifteenth parents, nor an essay advocating suicide as an escape from ashmen. It isn't even a treatise on skipping hotel bills. It is, however, entitled 'Hints for a Trip to the South,' and I have enough confidence in the sanity of the editor of this paper to assure you, therefore, that it probably does not advise you what to provide for an expedition in search of the north pole."

Satisfied that he had completely baffled any lurking inclination on the part of his spouse for further interruption, Mr. Toddlemore's mood smoothed itself out, and he turned his attention again to the article with great complacency.

But not for long. First, as he read, a puzzled frown slowly contracted his forehead; next, an assorted collection of grunts and snorts testified to his growing dissatisfaction; and lastly, he sprang to his feet and strode violently up and down the room, fumbling portentously, like a volcano on the point of an eruption.

"Why, what is it, my dear?" timidly asked Mrs. Toddlemore, anxiously noting these extraordinary manifestations.

"Listen to this! Just you listen to this, and then tell me what kind of a pot-bellied harpic-pale sick's gray wrote such an expression of drivelling idiocy!" snorted Mr. Toddlemore, gesticulating his arms to the very gravest danger of knocking over the lamp. "'Hints for a Trip to the South!' Hmph! 'Take a medium-sized handbag—does the chattering idiomp think I'm going to lug around a Saratoga trunk in my dainty little finger?—place a comb and brush, a washrag, towel, toothbrush and powder, a flat, well-filled pincushion and needlebook, scissors and thimble, and buttonhook.'—in this a portable boudoir, I'd like to know?—'a pair of easy low shoes for night wear,'—does the blabbering idiot think I'm going to walk to Florida?—'a pair of rubbers, a cinnagrette,'—huh!—'a small bottle of cologne water,'—huh!—'and a box of cold cream or vaseline'—humph! 'Tain't a blasted boudoir after all. It's a peripatetic drug store, that's what it is. Now, Mrs. Toddlemore, may I ask you what kind of driveling dude do you think I am to cart such a collection of the commonest necessities of life as that all over the country?"

"I think the article must be meant for—" Mrs. Toddlemore began hesitatingly, when her husband interrupted her with a roar.

"And listen to this! Oh, Lord, listen to this!" he howled, prancing up and down in his wrath and disgust.

"'A neat black skirt should be worn, and not removed at night. With a pretty, warm sacque slipped on, you are presentable for your morning visit to the toilet room or in case of accident.' Skirt! Pretty, warm sacque! What kind, what brand, what specimen of a night-blooming morning glory am I, anywayz?"

"But, my dear, the article is evidently intended for women," remonstrated Mrs. Toddlemore, shyly.

"It is, eh?" sneered Mr. Toddlemore, glaring with fierce suspicion at his wife. "It is, eh? What's it doing in my paper, then? Did you have it put in just to disgust me? I'll be dinn-blasted if I don't, unless you did, you keep to know no more about it."

Mrs. Toddlemore, meanwhile, [illegible]

"How do Susan, you're the first person I've seen to-day worth speakin' to."
"Well, I must say Mr. Pelham, you're a sight better off than I am."

The Ways of Legislators.

CAN'T I get you to vote for my anti-trust bill?" said the Congressman persuasively as he buttonholed his colleague in the lobby. "My name is attached to the measure, and it is natural that I should have a fatherly interest in it."

"My dear fellow," said the other Congressman, "I'd do anything I could to oblige you. But there are some points in your bill that seem to me doubtful. Suppose your bill should really injure a trust? I know you wouldn't do it intentionally, but—"

"Oh, pshaw! Why worry about an imaginary danger? And if it should really injure a trust, can't we appoint a committee to investigate how it came to do so?"

"True."

"And can't we amend it? Can't we make a big appropriation to render it more ineffective?"

"Why, of course," said the other Congressman, with an expression of relief. "It is strange that I didn't think of that! You can count on my vote."

And, apologizing for his hasty departure, he hurried on to get a job for a constituent, that being, in his opinion, the main purpose for which Governments have been instituted among men.

WILLIAM E. McKENNA.

"Gosh! Its lucky I happened to think of makin this show bell. I'm goin' to get down the mounting all right without bein' et by a bear after all!"

Were No Use.

THE minister was expecting a few visitors that evening, and remembering the greenness of his servant personally looked after the arrangements for the few light refreshments he was to serve his guests. Among other things he cracked a big bowl full of nuts and placed them on the buffet. When the proper time came for passing around his little feast he missed the nuts. Being a wise man he said nothing at the time. When the company had gone, however, he interviewed the green servant.

"Nora, what did you do with those nuts I cracked?" he asked.

"Shure an' I dunn know wot yez mean," said Nora.

"Yes, you do too," he said sternly. "Those nuts I put on the buffet."

"Oh, is that wot yer mean? Well, Sor, they was no good. They was all cracked up and I threw 'em in th' fire."

A Sketch of J. J. Hill.

THE last time Mr. Hill was in New York he was interviewed by a young lady who wanted what she called "a sketch."

Mr. Hill was in his private office when his secretary came in to tell him that a lady wanted to see him, and was quite persistent in her desire. With the memory of the various "ladies" who had seen him relative to the needs and wants of various societies and other institutions more or less charitable, Mr. Hill begged to be excused.

"But," said the secretary, who knows Mr. Hill very well, "she is a very pretty young lady—and I don't think she wants money."

"She is, eh?" said the Railroad King, answering the first part of the remark and ignoring the second; "well, show her in, but tell her I have not much time."

She came in. Mr. Hill looked at her, smiled, got up from his chair and greeted her very warmly. She was apparently about nineteen years old, pretty as a girl can be, and with the brightest of smiles. When Mr. Hill had seated her in the chair on the opposite side of his big table she opened the ball.

"I want a sketch of you, Mr. Hill, for So-and-So's magazine. I thought I'd come right to you—so that I could get the real facts. It's much more satisfactory, I think."

Mr. Hill didn't think just that, but he could hardly contradict the girl, so he let it go at that.

"What kind of a sketch do you want?" he asked, "Long or short?"

"Long as I can get it. I want it personal."

Now Mr. Hill feels ever so much more at home at a farmers' picnic in the Palouse than he does in a magazine, but what could the poor man do?

"Well—you ask questions and I'll try and answer them," he said at last, deciding in his own mind that he wouldn't go to the meeting of the Grass Twine Directors that afternoon.

"Tell me—what gave you the first idea about using every inch of space on your freight trains?" asked the girl.

He nearly collapsed. He expected to be asked his age, sex and condition, number of children, their ages, &c. He didn't expect the most vital question of railroad policy fired at him point blank across a four-foot table by a pretty girl in a blue walking suit.

"Eh—what's that!"

"They say that you owe your success to the fact that no space must be wasted on your freight trains. I want to know where you got that idea."

"Well—I don't know—I guess I just saw the empty trains going back, and thought it would pay to have them full—that's all."

"Oh no—didn't you see some farmer going home with an empty wagon and think how much better it would pay for him to have a load both ways, or didn't you see some other simple thing like that, and get your great idea from that? It would be a much better story!" said the girl.

He settled back in his chair and smiled at the girl.

"You go ahead and write this story yourself," he said; "you can do it much better than I can."

And the friends of the Railroad King are buying the magazine in question month by month.

He Said Nothing.

HE WAS standing on the scaffold with the noose hanging loosely about his neck. A crowd of sturdy and stalwart Westerners were lounging about the structure.

"Have you anything to say?" the doomed man was asked.

"Indeed he hain't," a woman shouted, elbowing her way through the crowd, "he'll have nuthin' to say while I'm around; he hed nuthin' to say sence we were married these last eighteen years, an' I'll be switched ef he'll hev anything to say now. Ef there's any sayin' to be did I'll say it, so you mought as well go on with the performance."

The doomed man turned pale, dodged as though expecting something to be hurled at him, and went to his death without even so much as a whisper.

Grammar.

WHAT part of speech is the word "marriage"?" asked the girl on the piazza of the Hardened Wretch.

And he, being himself a married man, replied:

"It's a subordinate conjunction."

The examination paper read: Parse the word Pennsylvania in the sentence, "A hold-up occurred the other night in Pennsylvania."

The bright boy answered that it was an abstract noun, being the name of a state, but Mr. Cassatt, when asked about it, thought it a proper noun in the objective case, being the object of "hold-up."

"The woman and the man were married yesterday—parse woman."

And the answer of the littlest boy was, "A preposition, governing 'man.'"

The Meanness of Mrs. Keifer.

THE holidays were happily over, and the beneficiaries of Santa Claus had returned to school with the jaded looks and poor complexions of those who have eaten "not wisely, but too well." With one accord they fell upon "teacher" and into her ready ear poured tales of acquisition and adventure.

With bated breath Olga told that she had ventured to steal out of bed and across the hall, and whom did she see but Kris Kringle, passing into the sitting room; and he had said in an awful voice: "Little girl, what are you doin' outer bed at this time o' ther night?"

And Olga had been so scared she had said she was just going to the store for two cents' worth of milk.

At this point the teacher looked sorrowful and reminded Olga that she had told Santa Claus a fib. Olga, however, only shook her beribboned head and explained that, if Santa had found out that her trip into the hall had been made with a view to "peeking," he would have clapped her into a bag and presented her as a Christmas gift to some childless couple. "An' then what would my mamma do?" asked the inventor of midnight trips to the dairy.

In spite of her rather ready imagination, the teacher was not exactly prepared to say just what Olga's bereaved parent would do, so, with the skill and cowardice of "grown-ups" when confronted with a sample of Lilliputian logic, she prepared to close the subject.

"Well," she said cheerfully, "I'm glad all my little people were so well treated, and that everybody got just what they wanted. What is it, Julia?" she asked of a rather gloomy looking little girl who was waving her hand to denote that she fain would hold speech with the teacher.

"We didn' get all we wanted off Sandy Claws," announced Julia firmly.

"Dear me!" said the official director of Julia's education, "that was much too bad. Why didn't you get all you wanted?"

"It was on account of Mrs. Keifer. She was too mean, already."

Now, Mrs. Keifer is the owner of the local candy store, and, as the teacher had always heard her spoken of as one who had a generous conception as to what constituted a "pennyworth" of candy, she raised her eyebrows to indicate surprise.

"You see," continued Julia, "me an' my mamma, we went for a walk, an' I seen all the dollies an' drums an' things in Mrs. Keifer's store, an' my mamma she tole the 'that Sandy Claws jus' lef' 'em there for Mrs. Keifer to mind till he should want them on Christmas Eve. An' what do you think Mrs. Keifer done? No sooner she got Sandy Claws's back turned than she sold them toys. She made people pay a lot of money for them; an' so, when Sandy Claws called for 'em there wasn't hardly nothin' left for us!"

By this time Julia's voice was thick with indignation and the teacher was divided as to whether duty called her to explode the Santa Claus myth, and so clear the character of the innocent Mrs. Keifer, or to let well enough alone. As she adopted the latter course, the record of the "candy store lady" is still besmirched.

Shadowy Goods.

The rainbow's pot of gold, I own,
Is somewhat will-o'-wisp-y,
But really, truly, I've been shown
A keg of moonshine whisky.

Conditions.

RUGGLES—What's the matter, old man? You look as blue as a pinched goose.

Struggles—That's exactly what I am. And so would you be if the girl you loved had accepted you so you couldn't tell whether she had or not.

Ruggles—Accepted and refused you at the same time. Is that what you mean?

Struggles—I reckon so.

Ruggles—Why, how could she?

Struggles—Well, I called on Prue—Miss De Muir—I don't know which I have a right to call her—last night, and after explaining that while I get only twenty a week now, I have hopes of a rise soon, I asked her if she would be my valentine forever.

Ruggles—Yes. Well?

Struggles (sighing deeply)—Well, she said she would be—if I would furnish the lace, and silk, and satin, and gold so that she could be a nice one.

ONE AT A TIME.

"Say, Sambo, wot yer g.a on dee roller skate lay?"

"Gee! I never skated on ice before an' I'm learnin' one foot at a time."

Verified.

Myrtilla in her evening gown
Is proud indeed to show
A pair of shoulders most superb
And white as driven snow.
I know the simile is true,
For when I grew so bold
As to confess my love, I found
The shoulder icy cold.
